I have both. I have Radio Shack two meter and ten meter radios and having fun on both of them with only a little money. Of course, I have the Advanced Class Amateur Radio license. The HTX-10 that I recently bought is a great radio for the money. I have an HTX-212, which is the forerunner of the current HTX-242, both 45 watt two meter FM radios. I think it is well worth the time and effort to get the ham ticket and talk to the world. I have had my license since 1955, and have had a ball on amateur radio.

The swr is a result of the match between the coax and the antenna feed point. Measure the swr at the feed point, change the coax all you want and the swr remains the same.

Hi,

I picked up a neat AM/CB converter receiver the other day. It's a Sperry Systems, Inc. "CONVOY 500" with 23 channels. It is packed in a cardboard can with metal ends. Has cig lighter power cord and antenna cord for hookup. Has OFF/CB switch on front.
Size - 4"W x 1.5"H x 2.5"D. Looks mint like it was never used. Package is in good shape. Label shows picture of unit on front, warranty and "CB 10" Code table on side of can. $20 w/shipping incl. takes it!

Thanks,
Jerry

Talking skip through a 10m repeater is pretty cool also,but for you
situation,keep in mind that it is (or was) easier to obtain your 2m tech
liscense than your 10m tech +,but i here the rules are changing and am not to
familiar with what has changed,so maybe you can get 10m privaleges just as easy
as 2m now a days.2 meters is a very populated band on vhf so you will have
plenty of peoplke to talk to,as in 10m is not as active a band,except for skip.
Good luck and have fun,73's

I have a quick question about this subject as I have heard all kinds of stories, and the way this was explained to me was that while changing the length of the coax will "show" a different VSWR, the actual VSWR is unchanged--however the radio will "see" a different level after changing the length.

The person that was explaining went on to use a simple and possibly incorrect example: imagine that the VSWR is a sine wave riding on a line similar to what you would see on an O'scope and if you pick out any particular spot on the line the value--how far above or below the center line is what you would "see" if you measured at that point.

I don't know if I explained that very well but I hope you see what I'm driving at.

Not that simple. Once you renew your license after the Epoch,
no one will be able to tell the difference from looking. I suppose
someone could come up with a clever callsign suffix to advertise
their legacy Extra status, like K6JQ/OF perhaps?

As for the grumbling about "Novxtra" and such - c'mon guys, show some
maturity. I expect this kind of "that's not fair!" bickering between
my youngest two children (ages 5 and 8), not from adults.

Hey, I can type 5 WPM on my keyboard. Does that allow me
to have a ham radio license?

1795. Amp design ?

Newsgroup: rec.radio.cb
Date: 2000-01-12 00:00:00 UTC
From: phil <phil@invest.fsbusiness.co.uk>
Message-ID: <NeQtFFAMgLf4EwQy@invest.fsbusiness.co.uk>
Source record: 19644

On a 16-pill push-pull pair class-B amp can someone tell me what type of splitter, if more than one, are used to feed the 50R input into the 8 push-pull pairs of 2879 output devices?

Is the same used in reverse as the output combiner?

I know that a 1:4 and 4:1 input splitter, output combiner is used in several of my 8-pills but I'd like to know if you can get all that wire on one torroid or what?

Thanks

Phil / UK

So Dick, are you going to carry around an internet-ready
laptop to prove that you are a pre-4/15/00 ham? How about
when your license comes up for renewal? The date on QRZ.com
will be after 4/15/00. OTOH, all I have to do is say I'm
an advanced and everyone knows I did 13wpm. :-) :-) :-)

Although there will be no more Advanced class licenses issued after
April 15, those who hold Advanced class licenses will continue to do so
indefinitely if I understand the R&O correctly. I would assume that if
you do a callsign search it will continue to show an Advanced class as
just that, which would tell you that they passed the 13 WPM.

As long as I can still eat in the same restaraunts, drink from the same fountains, participate in the voting process, and pee in the same (gender appropriate) restrooms, ya can do anything you want on the HF bands. Might I suggest, though, that the HF bands are not only "ours" (meaning the United States'). There will be many, many people in foreign lands listening to your tyrades, with a very highly raised eyebrow.

Bill, nice post. This is a healthy debate and while we all may
disagree, I think it's been an educational discussion to capture
all the elements, opinions,and viewpoints.

You hit the nail on the head regarding "Bash"ing into the
hobby. I remember those yellow and black "cliffs notes" looking books
with the cloaked vampire on the front advertised in the "Ham Radio"
magazine in the late 1970's. Now this has become mainstream practice
that our national organization, the ARRL, condones and promotes.

I am skeptical that the VEC will change the question pool -- they are
a not-for-profit organization on a tight budget and tighter timeline to
get a pool put together for the new exams by 4/15/2000.
I do not think there will be material changes to the existing question
pool, nor do I think we will migrate away from the publication of the
pool answers.

The one thing about elements 1A, 1B, and 1C is that it is difficult
to "cheat" (using the word loosely, since "Bash"ing is not technically
cheating, though memorizing the answers does defeat the purpose of the
exam to a large extent). The question pool for the CW element is not
published --- is that why folks complain that it is so difficult to
pass? There
are no "short cuts" to learning the code, except perhaps writing the
individual dots and dashes on the paper and then translating them after
the exam finishes (and most VE's will disallow that practice,
fortunately)

After reading all the debate, and stirring the pot to some degree
myself,
I am left with self-resolution on this conflict --It is not WHAT is
being tested, so much as "how" it is being tested. I'd be cool with a
difficult technical and operating skills exam replacing the CW element.
With no questions published in advance, where people have to learn not
only electronics theory and rules and regs, but also GOOD OPERATING
skill. The thing that makes the hobby so great is that folks value
their HF-priveleged
licenses because they take REAL WORK to accomplish learning morse. I
do
not see the same "respect for the service" with the no-code tech exam
that
I see for the Novice, General, Advanced, and Extra. The no code tech
is
more like a drivers license exam -- read a book for a couple hours,

memorize the answers, take a test, and you are licenced. Very
different
from taking 8 to 12 weeks to master the morse code at 5WPM and many more
hours to increase speed to 20+ WPM. Lots more investment.

Now, with the ability to memorize answers, and the ease of mastering 5
WPM
cw, the self-satisfaction, feeling of accomplishment, and time invested
in
learning within the hobby is diminished to a large degree. The
result, I contend, is less respect of the accomplishment, less respect
for the amateur radio service, less respect for the license.

Death of ham radio? No. Change? yes. For the better or worse?
time will tell.

Sounds like some people are doing some useless babble!
The restructuring doesnt make it easier for people to become hams!!!
You still have to pass your no-code exam and then pass 5wpm to
upgrade!! Whats the big deal??? Clinton administration didnt do
anything for me except give me a JOB and the ability to further my
education!! When has a republican did that for you? I can agree that
ALL POLITICIANS SUCK!!!!, but think before you speak!!

I hear all stating that tax cuts for the rich cause more circulation
of us funds... Yes it does, Right into another rich persons hands...
Therefore nothing is gained!!! 0=0

Who do you think forced SDMV to cut there reg fee's? Wasn't a
republican!!!

Start Giving to the people that make the world and not to those who
rule the world!!

I'm new to CB, and I've been trying to look for a good antenna for my car. I used to have a cheap "Rally" center loaded antenna I got at Wal-Mart in the area, then recently upgraded to a Little Will. I get a little better reception and also a little lower SWR.

I've read about top loaded antennas and I had the idea of putting a 3' Firestik using a trunk lip mount. I went into a CB shop and I was told that if I'm mounting it on my car, that "It's great on Sundays when you want to talk to God, because the signal will just bounce off the car and go straight up." He said that type of antenna was only for trucks, and he recommended that I stick with a base loaded antenna for the best performance. Am I really stuck with that option?

Let nature take its course! If CW falls off the earth, then the only one to blame is yourself (not you in peticular)!! Religious CW operators that keep complaining about the new fcc restructuring and whining they may lose there band segments can only blame themselves due to the fact that they always put down the No-Coder instead of helping to teach the interested No-Coder! I am a No-Coder at present and when I hear hams complaining as such, I think why even try if this is how it is going to be on CW? I am going to get passed the code requirement and work on it to improve my speed, but I will never put down a No-Code Tech or anyone else that is interested in the same hobby as myself!! I encourage anyone to become a ham regardless if they were or still on the CB radio due to the fact that a CB Operator has more knowledge of basic radio operations than someone who hasnt operated a transceiver at all!!! I even hear others on usenet and on the ham bands worrying that HAM Radio will come another CB band, This is a bunch of bull too... When I lived in the San Jose, CA., There was 3 or more repeaters and several Frequencies in the HF Bands that sounded worse than CB Radio and 95% of the operators on these frequencies were Generals and above! So dont go flaming the No-Coders when your current problem with the General, Advanced and Extra class needs work!!!

Sure, that's correct. I believe the topic was how to tell the
difference between a legacy Extra (with 20WPM credit) and new
Extras (with 5WPM credit).

I find that some high drive linears have different input requirements!
Find out what the max input of your linear is and try not to excede
it!
Any amount below its max is good, I find thatboxes reuireing 25 watts
max usually run verry well at 20 watts without causing harmful
interference to neighbors!!If yours is somewhat close to what you
stated in power input then try 12 watts for your application!

Yeah no kidding! Last I checked, RCI-2950's were selling avg of
$209.99 or less brand new! The mod for cb band takes 2 minutes to do,
and the most time consuming part of it is removing and replacing the
bottom cover!!

With the advanced communications facilities of today, Morse code is
more of a means to be Isolated from the rest of the band! It is a good
thing to know, but in emergencies, voice is the most fastest and clear
form of comm. Even though morse can be heard further than voice, I
have found that an extra mile is nothing to brag about!!

1819. Re: 10 meter or 2 meter, which is best

Newsgroup: rec.radio.cb
Date: 2000-01-12 00:00:00 UTC
From: yeahright@dopefish.com
Message-ID: <387ce29c.9101373@news.thegrid.net>
Source record: 19668

It depends on what license you are getting. If you are studying for
No-Code get a 2 meter rig! If you are going for 5wpm Tech class then
go for the 10meter rig! Be advised you cant operate 10meters with a
No-Code tech license! Also note that 10meters is a seasonal band,
meaning there isn't anything on the band for users unless DX is
opened! @ meters is allaround the year non-seasonal and you will find
people on the band at almost any given hour!

I started out with A 2 meter rig then went on to 220 and 440 first
then got my Yaesu FT-767gx. My Yaesu doesnt get used as much as the
UHF-VHF radios because the 7 year skip cycle!

Skip cycle= 7 years of skip then 7 years of no skip!!

That help yer decision?

Getting a low SWR is only 1/3 the job of matching. I have had a 1:1 SWR with only 1/4 loading and a friend had a 1:1 SWR with no loading. Both were bumper mounts on UP's. Next is finding a good ground plane. When you have all 3 in good shape then you have a good match, no splatter and good size lobes.
Cheers,
John

How good do you want?

The best antenna I have ever had was a 102" steel whip but this is not the antenna I would recommend for everyone. I must say though that it outperformed every other antenna that I tried.

Every antenna is a compromise, it all depends on your priorities.
What is your priority?

I owned a Bengal base station and it was an OK radio, the rejection on it was just OK, and so I tried a Stalker and it had such good rejection that I sold all my other radios and went with it.

HOWEVER--there is not a darn thing wrong with it, I had many people tell me that it sounded good. But I was only on sideband.

Chris -

No. The HTX10 is a ham-only rig, designed for hams to
use in the 28.0-29.7 MHz 10M ham band only.

While it shares some commonality with other platforms,
there are no jumpers that can be cut/added, no offset
mixer crystals able to be changed, etc. The PLL & CPU
are all on one chip and there are no external PLL lines;
all PLL control is done in chip's internal software.

For more info on HTX10 internals, please look at my old
posts in this and/or on rec.radio.equipment under the
name 'bill'.

With the same mounting location and antenna height as a
constant, the center and top loaded designs will have a lower
angle of radiation than a base load design.

If you are determined to use the more cosmetically pleasing
mounting point at the trunk lid, then try to stick with at least the
five foot Firestik. A better choice, at least for performance would
be base loaded antenna centered on the roof. The location makes
more of a difference than the type of antenna.

>

Keeping the line at even multiples of a 1/4 wave would actually
produce better results. a 1/2 wave line "mirrors " the antenna
impedance at the transmitter end. An odd multiple of a 1/4 can change
the impedance, But It won't change the actual SWR .

1829. Re: Amateur Restructuring Announcement - FCC screws Ham Radio!

Hmm! Even though memorizing the answer and CW is mostly what this post pertains to is not the problem!! If you memorize the answer then you get the question right, You have learned something regardless of what others say! In other words you might say that "0 being the answer to Question #44" is a memorized answer! However since the exams are not in a peticular order, there is no way to memorize an answer to a question unless you studied the book and sample questions! Which in turn means if someone passed the test then they so deserve to posses a license!

If you wish to protect CW, Quit bashing the No-Coders and teach a few!! That is the way to protect the CW portions of the band and to preserve the tradition! Explain to them why CW is important to you and why you enjoy CW so much! Dont point out its relevance or why its the best thing in communications, cuz everyone knows CW is not the best or fastest type of communication anymore!!! Encourage young and old users alike to pursue CW, but dont push it on those who have no interest!

I have interest in CW and upgrading to a higher class of license but I will not be the first to post a UseNet message Bitching and complaining about the possible loss of CW! If CW was lost, I would still be enthused by the means of communication to continue pursuing it and using it! It is not illegal to operate CW in non alotted CW portions of the bands.

Believe me, There are plenty of CB operators that would like to operate on those frequencies and if you dont encourage CW or stop bitching about CW, you will find more bootleggers on the band and blame the No-Coders for your own mistakes!

No-Coders are hams too, and by bashing a No-Coder you are Isolating yourselves to the point of extinction and will find yourself all alone!

What is the best way to set the SWR on dual antennas
to get them where thay match.
I checking them togather, i got them down to 1.3 on the hi & low side
and a 1.1 in the mid. I know this is good but dont no if they match.

Totally irrelevant.....a ham radio license is of no commercial use.
This is *Amateur* radio, not commercial/professional/broadcast/PCS
whatever.

The license is NOT a graduation certificate, but rather an entrance
permit to the hobby/service. What one chooses to learn after that is up
to them.

Yep... great commercial antenna site.... if you LIKE bein' lied to! It's the home of the 2 foot tall 5/8 wave 6db gain CB antenna. Do some checking on antenna theory before reading Firestick's gain claims and you'll have a whole new outlook on their antennas.

Not that they make bad antennas........ just that their claims are a fraud.

DFW International Airport is real close to me, I can show you around,
maybe give you a ride to the rental cars, even let you key up a heavy
Bighorn Maul. he he he.
Seriously, It is around 5 hours from here to Hot Springs, Arkansas. Me and
a bunch of guys will be going to Hot Springs from here, we usually leave
the Thursday before the break.
You could easily ride from here to there with one of us guys, there is
always room when we go, with plenty of room for luggage.
Hey Phil, E-Mail me if you have any questions.

Don was the lead design engineer and force behind SBE.

It was built just as well, with the same things in mind... Some of the SBE amateur equipment is still unrivaled... On par with the Collins for performance, but I wouldn't say that for durability!

Bravo, Cecil. You speak the truth. As an extra class 20 WPM ham who
enjoys CW, I decided to do my share elmering / being a VE. So,
I teach a cw practice session via repeater twice a week for 30 minutes
per session. It's amazing how many no-coders expressed interest in
"finally learning the code" but when they found out you cant "cheat"
and have to really learn CW (not just memorize published
test pool answers) they gave up and bailed out.Those few who stuck with
it upgraded to novice / tech plus....even had one
go to general.....all for an hour a week for ten weeks. Amazing.

Rote memorization is not on the same level as learning a fundamental concept thoroughly. Yes, there is some retention by rote, even enough to be useful (subjects like band and power limits come to mind), but knowing the answer to a question that asks which HF band to use when the MUF is a given frequency is not nearly as useful as learning the fundamentals of HF propagation as concepts, and as importantly learning and understanding how the various factors (solar activity, MUF, critical angle, antenna polarization and radiation angle, scatter modes, etc.) affect one another and combine to produce a certain type and quality of propagation.

I think the FCC would be doing operators a *favor* by closing the question pools, since people would have to study concepts and *understand* the theory well to pass the tests. The same folks would be happier later, ticket in hand, when the time came to actually set up and operate a station, and the learning curve of new hams would not be as steep as it is (listen to many of the questions asked on repeaters about basics, that in fact were on the exam the poser just recently took and passed, and you see this in action).

I have a pretty sponge like memory and remember the *wording* of many questions from the ARS exams [and others] I have taken, but I am very glad that I approached preparing for ham exams by using the ARRL guides, which I have hung onto because they are actually useful reference, because they treat their subject matter in thorough detail, and as a whole, instead of simply presenting the test questions with the correct answer highlighted and with only minimal explanation.

That is the difference between a textbook and a test guide. I have learned well the basics of propagation, antennas, safety, proper and effective operation, and AC/DC circuits from the ARRL guides (and books like them, such as George Grammer's "Understanding Amateur Radio"). Such reading prepared me first for the tests, then to set up and operate a station, and finally laid the foundation for further learning, understanding, and development in my hobby.

The Q&A style books certainly don't do the latter. If you use them you will wind up doubling your effort/reading later, since they do a poor job of really teaching principles. Even if the Q-pools don't get closed, whenever I can I urge that people avoid the Q&A type guides because you don't learn much from them that you can form generalizations from and then apply in particular cases.

We spend a lot of time debating license exams in terms of fairness, relevance, and their function as a filter. We ought to look at them, and change them as needed, more from the point of view on how well or poorly they prepare people to actually operate a ham station day-to-day, after the license has been granted.

For all you little hambos who've been posting
"enforcement" shit in this news group. Here's
a reality check for you about your buddy
Riley's press releases.

The FCC doesn't give a rat's ass about
"enforcement." They're too busy surfing the
net for pornography during official duty hours.
This includes child pornography which was
being downloaded to government computers.

A FCC pornography ring at the FCC's
Columbia, Maryland office was recently
quashed by the FCC Inspector General,
after it was learned from outside informants
that FCC "enforcement" personnel were
surfing the net for pornography during official
duty hours. The pornography, which includes
child pornography, was being downloaded and
stored on government computers.

Read the FCC Inspector General's report
yourself. They're getting ready to pull it, so
hurry. It's been getting thousands of hits a
day.

Firstly, aren't you atriculant enough to write coherently.

Secondly, I am not sure where you have been, but to the best of my knowledge there had been some pervious braggin on his side before THIS incident/thread.

The 4017 is a decade (divide by 10) counter of which its behavior can be manipulated using the RESET and ENABLE inputs.

You did not tell me your input onto Pin 16, so you loose any chance of your questioning game from going any further.

That also goes for your waveguide. Whats the waveguide material? Im assuming you mean radiation injected? Is the material round or rectangular? Just curious I suppose.

Give me a break. You are almost just as lame. Besides, I believe this "fight" did not include you... though with YOUR reference to homosexual acts, I can only assume that you are Prozac's boyfriend, in which case I understand why you are protecting him.

I believe in being humble/modest. Why should I brag, I would rather HELP others than making fun and picking fights because they may be a little illknowledged.

I did miss one. Your reply was of so little significance I got beside
myself.

For future reference, this should be noted as:

SARCASM - a mode of satirical wit depending for its effect on bitter,
caustic, and often ironic language that is usually directed against an
individual

This is why I said he contridicts himself. Why should a USED 16 pill
be sold for so much if he is earning $56,000 yearly salary with little
or no bills?

No, I am through with responding to you, due to the fact that you lack
the intellect to carry a rational arguement.

I've got just the rig you need...

It's an RCI-2950 mobile (covers 26.0-26.9), that's 10 and 11 meter (the CB band + some).
Works great on a Wilson 500 antenna (which I also have). You can run this as a base station
with a good 20+amp 12 volt power supply (don't have), and antenna like the Antron 99 (do have).

Will sell all (radio and 2 antennas) for $350US... and throw in 50' of good coax.
Radio comes with box, manual, and bracket... everything is about a year old.

Ok Hal, I read some of what you have written. For those of you out there that do not understand, CODE is a requirement, CODE get over and past obstacles voice cannot, that includes side band. In an emergency CODE has saved lives when no other mode of communication could get through. Those that want to learn CODE should be able to. Those no wishing to do not have to, they can stay wear they are. I do not like CODE any more than many people, but I can see that there is a necessity for it in Ham Radio, and that is the ability for all hams to communicate with one another in a special way that allows them all the ability to relay information accurse the globe when required to do so.

Do not become dependent on cell phones, computers and the like. They are fine methods of communication but in a pinch, then cannot get across when called upon to do so. CODE will, if there are enough people willing to use it and keep it alive. Look at Independence Day, fiction yes but a practical message, we do not need men from outer space to do what happened, we have them right here already, Iran, Jordan, Lybia, Afghanistan, Mexico and in other areas as well.

That was really a bad idea, not only does it reflect poorly on CB radio operators but it abuses excellent equipment. You are lucky you did not burn down the house or would you also enjoy that. We deal with keys being left open all the time here. Sometimes it is deliberate like yours. Just suppose someone really needed help on that frequency at that particular time and your dead key cost them dearly. You do not care you are having fun! Well your kind of fun is not needed or appreciated by those of us attempting to use the channels in a civilized manner especially along the boarder. Such methods are used to chase us off the frequencies, they do not work because we stick together and find ways around such individuals. Beams are great for getting around dead keys.

But it's your radio and your money. Fines if caught are stiff, so is the loss of equipment. And if only if an injury has occurred because of your dead keying, either directly or indirectly, the cost will be very large. Not in dollars but in years of your lifetime. Is it worth the thrill?

Well I disagree, I have been on Radio sinse 1972, I have a cell phone, a Ph.D in computer science, five computers, (a Mac, a Tandy RL 1000, an Acer 486, a home made PC and an Apple 2C which I started with in 1988.

While Radio Operators dwindle in numbers due to age and other interests, the attraction to CB and or Ham is one of purpose as well as personal pleasure. Many younger individuals just have not had the experience, or a good experience. Like my wife, some individuals fear machines. As rules and procedures get more complicated, individuals will steer clear unless a buddy helps them along. Its not the Radio, the frequencies or the hobby that is preventing new blood, its the older blood that is causing the decline. As a CB operator for many years the local Ham set does not welcome me with open arms. The last time a test was scheduled, that I wanted to attend, we could not find the test site, it had been changed and we were not notified. Some of my friends that are Hams were not happy that this happened to me. That has dampened my ham aspirations. But other friends had encouraged me. Ham or no Ham I shall still use CB , there are good people here!

You are correct, it is those persons that are snobs on both HAM and CB that cause the problems. I use my unit to monitor channels for the Federal Government. I have aided ships at sea and police on the boarder. I cannot go into details but radio an important means of communication along with computers and cell phones. We need to discourage abuse but along the boarder, well, unless you live here you cannot understand the frustration,

Mexican Government agencies using CB channels for official protocol. Mexican police and citizens using Marine Radio for CB at 25 watts and beyond to chase you off the channels. Official Government boosting of power across the boarder to cause hate and discontent among radio operators in general. We are few but continue to keep in touch.

>manufacturers are happy with this philosophy.
>Anything you get for nothing has no value. Think about it and you
>will know this is true. Anything requiring effort and truly earned,
>will be honored, respected, and nurtured. Why do we implement policy

Why do you say that? It simply is not true in many perjaps
most cases. I and most people I know value things based on their
uslefulness, and/or usefullness vs how hard it was to get. In other
words on some type of value.

>that will degrade the value of a license? Why not, just once, make it

Indeed these changes be they right or worng in conception do
INCREASE the real value of the lisence if perhaps not to yourself then
at least to many people. The near total failure of the CW side to even
seriously consdier this line of thought, is certainly a reason that
that side of the debate has not been able to muster any arguement to
really sway the people that count in this matter. The FCC

>something difficult, something earned, something valueable?

The value of the license is in what it allows one to do. In
those terms all licenses have and are and must continue to increase in
value, when any of the following happen, technology improves, numbers
increase or spectrum is enlarged. If you don't understand that value
of the license is in what you can do on the air then aren't you really
missing point of having a license?

As to earned or difficultity these seem to me be out of
place. Diffculity, the Government is NOT in the bussness of dealing
out S&M as the Dominant partner, (it manages this at times but that is
not one hopes the purpose of Governance. Earned, why should I earn
the right to use what should never have been so restrictied?
>I no longer believe that the ARRL is promoting this hobby in a manner

Alas here I agree with you. I can see where bythe ARRL is
doing much of anything to promote this hobby, at all, and without
regard to the manner in which they do so

Well, lets clear up some of the issues already mentioned by others.
Of course, which one you use depends on the license you seek. To
operate in the 10 meter band, you are going to need a General license or
higher (morse code). To operate in the 2 meter band, you need the
Technician license (no morse code).

Each of these bands have different characteristics. When the
conditions are right, the 10 meter band offers communications over great
distances (skip). And hords decend to take advantage of these
conditions. However, when the skip conditions are low, the 10 meter
band tends to die out as operators move to other bands that offer better
conditions (an option that will be available to you also if you have the
General license).

On the 2 meter band, the band itself does not offer much in long range
communications. To get around this, 2 meter operators have resorted to
technology. The use of repeaters offers great range with only minimal
equipment - it is easy to talk to another state using a simple handheld.
And, since this communication capability does not depend on conditions,
you do not tend to see the great fluctuation of operators as conditions
chance. Unless you're in a remote area, the 2 meter band stays fairly
active nearly all the time.

Of course, each band has different physical requirements also. In
general, the antennas are much larger on the ten meter band. Antennas
designed for 2 meters are very small, making mobile installation simple.
This also affects base installations also - larger antennas means more
difficult installations.

Now, that I have made that all sound so simple, lets confuse things
further by offering a few other notes. There are repeaters on the 10
meter band also. And there are areas where cross-band repeaters exist.
These cross-band repeaters allow you to transmit on 2 meters (with the
Technician license), your transmission is repeated on 10 meters, and
operators on ten meter can talk back to you (either with your receiver

set to 10 meters, or using a cross-band repeater to listen on 2 meters).

In other words, there is not a simple answer to your question. There is so much offered on each of these bands (with either license). In the end, you are going to have to read as much as you can on the subject and then make your own decision.

Good luck on your research.

I am suggesting that morse code is another language in itself, and
learning a language is harder than improving the language skills!
The post was to explain that The restructuring
isn't changing the difficulty level of passing 5wpm.
In other words, Passing 5wpm is harder to pass than 13/20 wpm.
Therefore I must ask you, Did that answer your question or was I not
reading your question right?

Have you tried looking at something in a solid state version?
Tube type amps are nice but solid state are more dependable and are
more long lasting. Tubes tend to go flat and are harder to replace!

> 73, Cecil, W6RCA http://www.mindspring.com/~w6rca

I think there's widespread confusion between the ticket (and associated
callsign) and the hard work it may have taken to earn it. It's the FCC's
job to make sure you meet some *minimum* requirements they've set up
to get on the air, and it should be the ARRL's job to recognize and award
outstanding hams
for their achievements.

It should be up to the ARRL and not the FCC to develop awards for
hams for proving you're achieved some noteworthy accomplishment.
For example, they should have awards (if they don't already) for
finishing (say) 50 QSOs at 10, 13, 15, 20, 25, 30... WPM, presumably
without a QLF. :) There are already awards where you can nominate
exceptionally
good operators, and presumably public service awards would work the same
way.
I see no reason why you can't brag about a 30WPM award the same way as you
would a DXCC or your 2x1 callsign. Am I totally all wet on this?

The bottom line is the FCC doesn't care how hard you worked,
nor are they interested in certifying your skills to other hams or
impressing your buddies with your high-class callsign.
They just want to be sure you pass muster. They issue the
ticket as a permit to allow you on the air, plain
and simple. You meet some minimum standard, and you're in just the
same as the guy who got every question right and 100% copy on the
code test. (This "Pass/Fail" phenomenon at the DMV explains a lot about
what
passes for driving in Calfornia, but that's a whole other digression.) ;)

If the ARRL was so eager to nurture and protect the Code, they ought to get
off their
collective butts and find ways to recognize hams who DO use the code. The
FCC
doesn't (and shouldn't) care about our internal squabbles.

You might want to keep on friendly terms with your neighbor....
While the "so-called" limit may be 60 feet (quoting you), the FCC DOES NOT
stipulate that you have the "right" to a 60 foot tower. Local regulations
and codes, as well as covenants and deed restrictions may rule out any
antenna at all or restrict you to a certain height (35' in many cases).

I don't know your local situation, but PLEASE don't rile the neighbor and
expect the FCC to back you up at the local Zoning board.... IT WON"T HAPPEN.
I've watched several hams and CBer's get into shouting wars with neighbors
and it VERY seldom leads to situations that favor the radio op.

If you want a Firestik, use the KW series like the KW-7. Using the II
series
(with the tunable tip) will handle more power, but won't work as good as
the
7 foot version. Use the longest antenna possible because 27 MHz is a
long
wave (36 feet). Short antennas suck wind! If you think 7 feet is too
long,
try a 102" whip (about 8.5 feet). I had good results with a Wilson 1000
mag-mount, but prefer my KW-7. Better height and better range.

> Totally irrelevant.....a ham radio license is of no commercial use.

It's a certainty that it will never again be, but it has
not always been so. As a high school kid I got a job after
hours repairing radios and TVs *ONLY* because I was a ham. I
got into military electronics, and graduated near the top of
my electronics school class, because I was a ham. Later I
got a GOOD technical job in radio - because I was a ham and
had used that fact to build my resume.

> This is *Amateur* radio, not commercial/professional/broadcast/PCS
> whatever.

Yep. Only a mere shell of its former self.

> The license is NOT a graduation certificate, but rather an entrance
> permit to the hobby/service.

You jokers have regurgitated that tired old bromide until
even the kids at the FCC believe it, now. But Hey, what do
they know, they just work there, right?

If you prefer to view your EXTRA class license as an
"entrance permit" to the hobby, it tells me that you got it
for free. Most of us did not, and DO NOT. The FCC, at least
30 years ago, considered an EXTRA class licensee to be the
only expert class of ham. The fact that he was knowledgeable
enough to score a passing grade on their tests was proof
enough.

Congratulations on changing their minds. Henceforth there
will never be anything other than "entry level" class hams
licensed. And that's exactly where most of them will stay.

JJ wrote in message
>Well, lets clear something else up, holders of Novice and Techs class
>licenses have access to 10 meters.

Sorry JJ... THAT's NOT THE CASE...

Codeless Technicians have access to all ham bands above 30 Mhz...
6m, 2m, 220Mhz, 440Mhz, 900Mhz,1.2Ghz etc...

Novices also have access to a portion of 220Mhz

Novices and CODED Techs have access to portions of several HF bands,
including 10 meters... CW on 80,40,15, & 10m and SSB on 10m (in the Novice
portion of each band) Novice and CODED Tech licensees are restricted to CW
ONLY on 80, 40, &15m and CW, SSB, and Digital on 10m (no AM/FM/SSTV etc)
Maximum power (legally) for Novice/Tech-plus licensees on the HF bands is
200 watts

I know what can happen, and have friends dueling with their neighbors. My antenna is only 20' off the ground at the base. She thinks that is really high. I am in friendly terms with her and plan to stay that way. There are no restrictions in my area for antenna's. I just want to be able to show her the FCC literature in case she ever wants to call them out. I want to be able to head off that situation and keep them away.

>==
>yeah ok you know what you are talking about . Not! you tell me the material
>what would it matter if it was round or rectangular?

Go back to ECPI my friend. When you feel ready to visit real schools
such as Cal Tech or MIT get up with me.

You know, Im curious....

Could a MOSFET be damaged from driving the Gate (15vpp) when there is
no B+ applied? Suppose it is in an amp cicuit wth Source grounded and
B+ is applied through the primary of a transformer.

or

Design a circuit which is capable of subtracting one binary digit from
another. The design procedure should include a Full description and
function of a Half Subtractor and a Full Subtractor. What would I
need to do here?

or

I am sure you know what a XR-2243 is. Or can look it up.

or

What difference would it make if a waveguide were circular or
rectnagular.

or

the HP R281A

yep, we're getting deeper....

Now... the reason I did not go into tuning a waveguide is simply
because it is lengthy:

Im not about to write a book on multipliers, SIS current, doublers,
triplers, local oscillators, GUNN tuner and backshort drive, etc,
etc... Get real!

Now is this alt.radio.cb or alt.bragging.rights

I was trying to keep it a simple fact that Prozac likes to brag when
there is nothing to brag about... How long are you going to defend
your boyfriend that probably knows not half as much as us?

Hmm lets see, I have 2 wilson 1000's and 3 k-40's and neither of the parts are interchangeable. The stainless steel whip of the Wilson 1000 has to be cut to the exact length of the k-40 and then the diameter of it also has to be reduced in size! The whip on my wilson 1000 is 3 inches longer than the one on the k-40. He would be better off just getting a Wilson 1000 since k-40's smoke at 200 watts.

Source record: 19736

Probably a K40 trunk is the best all around antenna. If you
want to jump up in performance, partly due to location, get
a Wilson 1000 or 5000 roof mount. If you do not like
drilling holes, then the magnetic mount. A trunk mount does
have some lobes that does not much good.

See...
http://www.wilsonantenna.com/
http://www.radiocom.com/K40antennas.htm

Cheers,
John

> In other words, Passing 5wpm is harder to pass than 13/20 wpm.
> Therefore I must ask you, Did that answer your question or was I not
> reading your question right?

Well, I understand your point, but you may not have tried this yourself. There is a definite 10wpm 'Wall', I am there now. This is caused when you are trying to condition yourself to use the 'sound' of a character to recognize it vs. interpreting a collection of dots and dashes. As the mind fluctuates between modes, you hesitate and start missing characters.

I am earnestly trying for my 13 or 20 wpm, but still think Morse code has zero to do with radio.

Please stop crossposting this to the sat group.

Thanks

I believe your problem is the small sample size in your study, and the source of the samples. You have been running with the "wrong" crowd.

>Although I've come across Amateurs who are genuinely sincere in thier
>interest in radio as a whole and respect CB radio for its own sake,

So, by your own admission, one DOES find Amateurs who respect CB. Let's not concentrate on the negative.

>It seems
>that old time Amateurs are very angry that the code is being relaxed,
>because they had to learn so many wpm and now the next group doesn't
>have to bother.

As one of the "old time Amateurs" (since June, 1961), let me assure you that your perception is wrong. I can't begin to tell you how many times the path to ham radio has been made easier since I got my license. I think it's great! And I am not "offended" that more people "may join the club", as you infer. Most of my peers in this longivity bracket feel the same way. We welcome new folks and will help them in any way that we can.

>I can not associate
>myself with such a crowd.

Well, it's a free country. You said you found some quality people in Amateur Radio, and you freely are choosing to disassociate yourself from them. It's your prerogative.

You also said, "I was about to learn code and get my amateur license when this change in the code requirement took effect." Something previously must have peaked your interest. If a few posts in an Internet NG changed your mind, you are like a dead leaf, blowing whichever way the wind takes you. Get on a firm foundation, and start thinking for yourself.

Perhaps you will reconsider and will obtain a ham ticket someday. If so, you will be welcome. Reports of snobbiness toward CBers are greatly exagerrated, I assure you!

It is NOT irrelevant. At least it wasn't a few years back. I know from
personal experience. I was hired at a job once over another candidate,
because in addition to my other qualifications, I had a ham license. I
was told by the hiring manager at the time, that having a ham license
means that you actually "live" this stuff, and don't just look at it as
a 9 to 5 job, which they thought, meant a better employee. This was back
in the days when hams still built alot of their own projects, and the

title of "ham radio operator" was synonomous with "electronic tinkerer" or "freelance engineer".

While a ham license is not a true accreditation, it tells something about the person's goals, and interests and gives the hiring manager some clues as to whether or not the person would make a good technical employee. Of course if you are in a field other than electronics, then it's probably meaningless.

Today, with the preponderance of appliance operators, who really don't know much REAL theory, I would tend to agree that the license no longer stands for much.

>

Ok, now that you've ruled out the internal supply, we need to look elsewhere. I'm now inclined to believe that this is an audio stage RF feedback type of problem. What does the "hum" sound like? (I know this may be difficult) Is it a 60 Hz A.C. power line hum? If so, there may be an unshielded audio wire somewhere. Check the audio lead from the mike jack and make sure that the audio shield is connected to ground. Also check for any other loose ground connections to the board ground and chassis. Sometimes a little tightening of the screws that hold the board to the metal chassis is all that's needed. When you talk into the mic, does the hum ride along in the background, or does it completely drown out the voice? Can you hear any voice at all, or is it 100% hum?

If the "hum" is more like a squeal, then I'd suspect that there may be an RF feedback problem. This problem could be caused by one or more bad audio bypass capacitors in the audio stages. This will be a tough problem to track down, since there are alot of small electrolytic caps in the radio.

This would be a good "fun" project for someone who has the knowledge, the time, and an interest in restoring one of the "classic" base radios of the 70's. But at current shop rates, you will quickly surpass the value of the radio, if you take it in to have it fixed. In fact many shops will discourage you from fixing it, trying instead, to sell you a new radio. It's your (or your brother's) call.

OK Pros,

Let me tap into your wealth of knowledge once more here:
For those of you who have tied the clarifier in with TX on radios such as the Cobra 148F GTL or Texas Star 696F, does the frequency counter track with the clarifier setting? Also, is Texas Star a company to itself or is it simply a line of radios marketed by another company, such as RCI?

Thanks!

Paul

Well, I guess I'm getting a little ahead of myself on this one. I was thinking to the new license system. You're right, under the current license system, Novice and Tech Plus operators have access to 10 meters.

However, in a couple of months, under the new license system, it will require a General for access to 10 meters. The Novice license, and Tech Plus license, are gone under the new system.

Sorry for the mistake. And thanks for clearing it up, JJ.

The '57' was a great radio, for it's day. But it was really surpassed
in quality, performance, and 'hackability' by the '457' chassis with the
uPD-858 chip.

I really liked the 57, but keeping them on the air was a royal PITA.
If you could get one without the potting on the VCO module, then
you'd probably have no problems, except some slight microphonics.
And even then, it was probably a mobile issue with vibration. So
I'd have to ask, how many times have you seen a '57' mobile?

The other issue with the radio was also with the VCO module. The
potting wasn't that bad an idea, IF it was installed correctly. If the
module was 'stood off' to pot it, then heating and cooling it from
on/off
cycles wouldn't pull the pins and make it intermittent.

But bottom line is, and was, that the '457' when set up right, was a
much better radio.

Greetings!

You can add,

"Not using the right antenna" - "Antenna designed to be used for CB band"

I've come across setups that use "scanner" type antennas.

Poor mount location.

Just can't run any antenna too well when it's not located in a spot on the vehicle that is above the main body of the vehicle.

While Dancing with the Mouse on Mon, 10 Jan 2000 21:49:55 -0800, the Modem interrupted with an MNI from ""jke" <jke@advnet.net>", and the MotherBoard buffered this to Video RAM:

1944. Re: Midland 77-115?????????????

Newsgroup: rec.radio.cb
Date: 2000-01-13 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <387d25a8.2697955@news.iserv.net>
Source record: 19793

Greetings!

A good little radio, needs a little help with receive, and a *lot* of help with the Mic Gain control.

Some fixes...

Remove Q202 - Mod Limiter [hate to admit that but it does allow the radio to work at full mod. Otherwise you'd have to load down the audio line at the limiter with a 10K resistor]

Short out ground pad on solder side of board, by C238 and C242 - you'll see it as a cut trace by audio chip. There is a wire jumper soldered to on the top. They, Midland, take care of this problem done by soldering a wire jumper on the top portion of the board. I just finish the grounding by soldering over the two pads to bridge the gap.

To help reduce noise, use a #14AWG wire, from main power supply cap C241 ground [on foil side of board] to MIC GND wire, by audio chip, towards front of board. Solder the jumper from the negative side of the cap to the solder point of the black mic wire, on foil side, it's labled GND on top of board.

The power supply cap ground is the large foil pad, while the positive side is a small trace from the cap, solder to the negative terminal of this cap and keep the run as short as possible.

While Dancing with the Mouse on Tue, 11 Jan 2000 10:14:50 -0600, the Modem interrupted with an MNI from ""Kevin Wentland" <alamocity99@hotmail.com>", and the MotherBoard buffered this to Video RAM:

That depends upon who you ask. I've heard great sounding radios from all the manufacturers. I must admit I'm partial to the TenTec sound though. :->

I think the others have covered off the differences between 10m and 2m. All I can add is that if you are located in a big city, there is probably much 70cm activity. If so, forget about the 2m rig and get a dual-band 2m/70cm radio. I have one of these but spend about 99% of my time on UHF. They are easily worth the premium you'll pay for 'em.

It is gonna be close to where the power leads come in. Use a Fluke meter on the diode check function and beep every diode you see in the area. The one that beeps continuously is gonna be it.

None of this tells me anything I don't already know, I have been
licensed for 40 years.

The orginal statement was "To operate in the 10 meter band, you are
going to need a General license or
higher (morse code)."

Like I said, Novices and Techs (Tech+ if you will) have access to 10
meters.

You may have fried the finals in the radio. Did you tune the new antennae? Did you wire the radio correctly into the new vehicle. Its easy to change plus and minus wiring. Take it to a radio shop and have it looked at. Also recheck the wiring in your new vehicle as well as the connections. Recheck the SWR also.
Having said all this, good luck!

HEY CAP"N CRUNCH, before you slander a company make sure you have the FACTS!!! Firestik has never made GAIN claims, NEVER!!! They base the performance of their antennas purely on the THEORY of top loading is better than base or center loading and LONGER is better. I think your refering to WILSON about gain claims, not FIRESTIK.

The Technician is by definition, an entrance level exam, and has been for 10 years. The General and Extra are more than entrance obviously, since they require more knowledge to pass. However, they are entry levels to their enhanced privileges. In no sense are they graduation certificates, or proof that someone has achieved something great in technology development. Amateur radio never was meant to be a college degree. The only applicability of an amateur radio license to the commercial world that I know of is that an Extra will get you a *Third* class NARTE Technician certificate.

I ask people on the radio, how my radio sounds
they say its ok, I wount it to sound better then ok.
I have a Cobra 148 gtl,
dule 58" trucker ll steel antennas with center-loaed,
center-laoded is 3" above the cab,
swr is down to 1.3 on the hi & low side an 1.1 in the center,
75ohm coax,cut to 9 feet {3x'}
good strong power an grand,
Transmiting,recving an modulation could not be better,I get a good
15+ miles with this set up as with all the ohers i instaled in the past
The radio has been tund an cliped by a well none radio tec none to be
one of the best.
What is left that needs to be done to make the set up sound
better then others, {better then ok}

Hi All,

Just out of curiousity, how many of the 'die hard' 11m ops here are going to get a ham ticket now that the rules have changed? There is enough debate over what is good/bad about reducing the CW requirements and I am just wondering how many of the regulars in the group will be 'running out' to get a ticket after 4/15. I'm not talking about present Tech+ or Techs, just newcomers. There seems to be a lot of fear about the ham bands being overrun with 'CBers.' Lets see if that is justified...

And to further it, how many are planning to run out and buy a NEW HF radio ar accessories if you do get a ticket?

Just a little informal poll, not a troll...

73 and enjoy radio however you can,
Kevin

Maybe now you'll have to:

a) conduct interviews,
b) hire college graduates (from a relative field), and/or
c) hire experienced broadcast engineers

I've had mine for years, but I like talking on CB just as good, if not
better than most amateur frequencies. Bear in mind that I am currently
a tech plus, at this point, however.

I suppose a similar/alternate question is how many HAMs that
also are are CB will take this opportunity to upgrade from Tech+
to General or beyond?

> had used that fact to build my resume.

The ham license has never been proof of electronics skill or knowledge, Dick. When you got the jobs you describe above, did you do so without any further training? In other words, did the radio/tv repair shop hire you without giving you any training after you were hired? Did the military hire you without any further training?

If they had to train you, then you cannot now claim that passing the ham license exam was evidence of electrical skill since those organizations did not take that license as proof of electrical skill. For those organizations, that license was only proof that you had some basic understanding of basic electronics and therefore would be easier to train than another person.

And the ham license of today still serves that purpose. However, it plays less of a role in the hiring process today simply because radio plays less of a role in an electronics career today. Years ago, because of the greater role radio played in an electronics career, many more organizations were willing to give credit for any radio training (no matter how basic). Since radio plays less of a role today, fewer organizations give that credit (even those who did years ago).

I also think you're being a little disingenuous here, Dick. After working at a radio/tv repair shop, graduating near the top of your electronics school class, and working in electronics in the military, I really doubt that the ham license really played that much of a role in your later employment at that "good technical job."

The simple fact, whether you want to admit it or not, is that the ham license exam has always been an extrance exam into the world of hobby radio (hobby radio, not professional or commercial radio). That is the way the FCC designed it many years ago, and that is also why there have always been other, much more difficult, license exams for professional or commercial radio personnel.

With that in mind, the existing license exam system serves its purpose well.

I understand it real well, In fact it's an 8wpm barrier but you may
have got stuck at 10wpm. Morse code does in fact have something to do
with radio, We dont send it over the phone do we? But I do agree with
most of the post in here that morse at present does not make ham radio
what it is today. Maybe 30 or more years ago, but not today. Good luck
getting passed the barrier and I hope I dont have that problem when I
get there which I know I will! :(

> that I stick with a base loaded antenna for the best performance. Am I
> really stuck with that option?

The guy at the CB shop has no idea what he is talking about. The firesticks were originally designed for passenger vehicles. Truckers later adopted them because they were tough enough to take a little abuse, and because they were easy to set up in a twin whip design on truck mirrors.

There is no reason that the signal would "bounce off the car and go straight up." In fact, many top loaded designs will tend to have a lower angle of radiation. So I have no idea where he got this notion.

What he may have been warning you about is a three foot antenna on the trunk. Since the three foot antenna is going to be hidden behind the car passenger area (and the car passengers), it is going to have poor performance towards the front of the car. You may want to consider a taller antenna. A taller antenna would put more antenna above the roof, giving better performance towards the front of the vehicle.

If you're concerned about appearance, you may want to look at one of the more popular base loaded antennas (Wilson and K40). These tend to have smaller whips, which is less noticeable on the vehicle.

Okay. I will accept your inability to comprehend a statement. Read
close now. Try to read my last post real close! Then you will see
that I was not calling you Joe Rhooligan. Even Joe has more brains
than you.

The built in frequency counters track the synthesizer portion of the radio and do not work in conjunction with the clarifier! But the clarifier movement will show on the frequency counter since you are changing the synthesizer frequency by moving it! As for Texas Star, I know there linear amps are there own, but the radio line I know nothing about!

If your only in it for the sound, Go out and get yerself a power mic.
I recommend a "D-104 M6B Minute man 2" handheld mic made by "Astatic"
for a 148gtl. I do all the mods on 148's and knowing that others do
different mods, its hard to say what else to do.

For 148's or any radio using MB8719 PLL: Cobra 2000 gtl, Teaberry
Stalker 9, Uniden Washington, Uniden Madison, Uniden Grant & XL, and
so on...
I usually charge $25.00 to do the full frequency mods, Remove the
Audio Limiter, Unlock the Clarifier and to Expand the Receiver gain.
Some other mods I do to 148's are Install RF Power Control via outside
the radio and this is done utilizing a new double potentiometer
similar to the Volume/Squelch on these radios and a Coarse/Fine tune
similar to that on a Cobra 2000gtl. Add a heat sink similar to those
found on Galaxy radios to the back for better cooling of finals. These
mods when done at the same time as my basic price is just a few
dollars more and the cost of parts Plus no new holes are drilled in
the radio cabinet! The basic mod above I can usually have done in less
than an hour!

If you have any questions about these mods or type of radio's, or want
me to mod your radio fer ya because you dont want to blow it up, you
can call me in Redding, CA. via 530-229-0896 and ask fer John

What should it matter to the cbers? Why not ask all the techs if they are going to upgrade before 4/15
So it was 5wpm get in before and it still will be 5wpm get in what the big deal about this. If you can pass 5 wpm now what differance will it make on april.15? You are still a tech+. And need to learn the code.

INTRODUCTION

The Federal Communications Commission (FCC) is an independent
regulatory agency exercising
authority delegated to it by Congress under the Communications Act of

1934 as amended by the
Telecommunications Act of 1996. The FCC is charged with regulating
interstate and international
communications by radio, television, wire, satellite and cable. The
FCC's jurisdiction covers the
fifty states, the District of Columbia, and U.S. possessions. The
mandate of the FCC under the
Communications Act is to make available to all people of the United
States a rapid, efficient,
nationwide, and worldwide wire and radio communication service. The
FCC performs four major
functions to fulfill this charge:

spectrum allocation;
creating rules to promote fair competition and protect
consumers where
required by market conditions;
authorization of service; and
enforcement.

The Chairman and four Commissioners are appointed by the President and
confirmed by the
Senate. William E. Kennard was confirmed as Chairman on October 29,
1997. Chairman
Kennard previously served as the General Counsel of the FCC since
coming to the Commission
on December 8, 1993. Harold W. Fuchtgott-Roth, Michael Powell, and
Gloria Tristani were
seated as Commissioners during this reporting period, joining Susan
P. Ness who has served as a
Commissioner since May, 1994. The majority of FCC employees are
located in Washington, DC.
FCC field offices and resident agents are located throughout the
United States.

The FCC is actively involved in planning for the consolidation of the
Commission into the Portals
facility located at 1250 Maryland Avenue, S.W., Washington D.C. Phase
1 of the move is
presently scheduled for October, 1998. The Office of Inspector
General (OIG) is tentatively
scheduled to occupy space on the second floor of the Portals. OIG
personnel continue to work
with responsible Commission officials to ensure that the unique
requirements for security and
confidentiality of persons wishing to visit the office are fully
addressed.

The Commission continues to auction spectrum as authorized by the U.S.
Congress in the
Omnibus Budget Reconciliation Act of 1993. On February 18, 1998, the

FCC concluded the
most recent auction, the Local Multipoint Distribution Service auction
of spectrum located in the
28 and 31 GHz bands. This represented the largest amount of spectrum
the FCC has auctioned to
date. These frequencies can be used to provide a number of services
including wireless telephony,
data Internet access and video. The total net revenue raised by this
auction totaled $578,663,029.
The latest auction results raise the net revenues of spectrum
auctions conducted by the FCC to
approximately $23 billion dollars. The OIG continues to place
significant emphasis on evaluating
and testing the security and reliability of automated systems
dedicated to the successful conduct
of all phases of spectrum auctions. In this reporting period, through
a comprehensive testing
methodology, auditors continued to assess the integrity of data
maintained in the existing
Collection System. Validation of data residing in the existing system
is essential before that data
can be exported to populate the new collection system in fiscal year
(FY) 1999. In the six-month
period covered by this report, auditors completed a Special Review of
Auction Application
Security and performed fieldwork related to auction information
technology (IT) security. The
auction IT security fieldwork and report are scheduled for completion
in April, 1998.

The OIG continues to provide expertise to the Commission in the
procurement and contracting
area. In this reporting period, the OIG issued two contract audit
reports, one of which developed
questioned costs of $12,420. Audit activity also resulted in the
receipt by the FCC of $20,000 for
rental payment owed the Commission by a contractor for use of FCC
space.

Two major investigations were concluded with the release of final
investigative reports during this
reporting period. On March 23, 1998, OIG Investigative Report
96-2-A-04 was forwarded to the
Chairman. This report identified improper administrative conduct on
the part of FCC employees
that established an environment in which the FCC was highly vulnerable
to illicit activity on the
part of a subcontractor. Prompt and decisive intervention by OIG
personnel minimized the
financial loss to the FCC and actually resulted in cost recoveries and
withholding of contractor

invoice payments totaling $294,966.84, to date. In addition, the OIG supported the Federal Bureau of Investigation (FBI) and the United States Attorney's Office (USAO) for the District of Columbia, in obtaining a multi-count felony conviction of the subcontractor and a co-defendant.

A second significant investigation was concluded on March 31, 1998, with the release of OIG Investigative Report 97-4-C-08. This report addressed the improper conduct on the part of FCC employees who used the internet to "surf" to pornographic sites and, in some cases, download and store pornographic images and textual depictions of pornographic events on Commission computers. Such conduct was determined to be in violation of 5 CFR 2635.704, entitled "Use of Government property" and 5 CFR 2635.705, entitled "Use of official time."

On October 30, 1997, the OIG issued Inspection Report No. 97-08, summarizing the results of our inspection of seven offices in the South Central and Western Regions. During this inspection cycle, the focus of our effort was an assessment of the effect of restructuring of the Compliance and Information Bureau (CIB).

The OIG has dedicated itself to assisting the Commission as it continues to improve its efficiency and effectiveness. The Inspector General (IG) reports directly to the Chairman. The OIG is located in Room 752 in the FCC headquarters building at 1919 M Street, N.W., Washington, D.C. 20554. The office is staffed by the IG, H. Walker Feaster III and six staff members. Paul Brachfeld serves as the Assistant Inspector General for Audits (AIGA). On April 1, 1998, Charles J. Willoughby assumed the position of Counsel and Assistant Inspector General for Investigations (AIGI). This position had been vacant since Robert G. Andary left the FCC on November 8, 1997, to become IG at the Government Printing Office. Mr. Willoughby has had a distinguished career and has held such positions as Senior Associate General Counsel for Litigation at Howard University, Staff Counsel to the U.S. House of Representatives Committee on Standards of Official Conduct, and Assistant U.S. Attorney, for the District of Columbia.

This report includes the major accomplishments and general activities of the OIG during the period October 1, 1997, through March 31, 1998, in accordance with Section 5 of the Inspector General Act of 1978, as amended 5 U.S.C. App. 3, 5.

AUDITS

OVERVIEW

On March 13, 1998, the OIG Audit Staff was the recipient of the Exemplary Organization of the Year Award from Chairman Kennard for the outstanding and dedicated work performed by the staff in a time of limited resources. Specific mention was made of the assistance the staff provided to the FBI and the USAO in securing the multi-count felony conviction of persons who acted to defraud the FCC.

During the reporting period, the OIG issued three audit reports, one audit survey report, and eight final reports reflecting the results of our Field Inspection Program. On November 8, 1997, the AIGI position was vacated and the AIGA assumed the additional position as Acting AIGI. Over this reporting period, investigative activity consumed well over half of available audit staff hours. Details related to the investigative caseload and accomplishments are provided in the Investigations section of this report. An OIG auditor also continued to chair the committee of senior FCC management officials dedicated to supporting the Commission's efforts to acquire and implement a financial computer system to track collections information. As part of this effort, the OIG subcontracted with the accounting firm of Ernst & Young to assess the integrity of data contained in the collection system. Results indicate that some data integrity concerns exist. Fieldwork related to this data integrity task has been completed and a report will be issued in April, 1998. Likewise, fieldwork for a followup review of auction site IT security has concluded and the audit report is currently being drafted.

The nature of the work performed at the FCC, and the customers that we serve, make the security and integrity of our information systems a paramount consideration. In testimony before the House Subcommittee on Commerce, Justice, State and the Judiciary on March 25, 1998, Chairman Kennard addressed the FCC's Year 2000 plans and related FY

1999 funding request of
$5,765,000. The Chairman stated that "FCC systems which have been identified as having
significant Year 2000 compliance issues include our applications processing, fees collection, tariff
tracking and public comments filing systems. For each of these systems, we have completed
requirements studies to replace them with restructured and, in many cases, integrated, state-of-
the-art electronic filing and relational database systems." The OIG continues to actively monitor
this effort which is directed towards ensuring that the FCC is prepared to address issues related to
the Year 2000 conversion. In addition to monitoring the Commission's progress in dealing with
Year 2000 issues, an OIG auditor participates in a Commission working group that monitors the
efforts of telecommunications and broadcasting companies addressing the Year 2000 problem and
works with their customers to ensure their service will not be disrupted.

OIG audit staff continue to monitor the FCC's activity related to the Government Performance
and Results Act of 1993 (GPRA). GPRA is intended to improve efficiency and effectiveness of
federal programs through the establishment of specific goals for program performance. The
Office of Management and Budget (OMB) has called upon IGs to "assess agencies' technical
compliance with the Results Act as well as their capacity to comply from a data and systems
perspective." The OIG will perform audit fieldwork in the second half of FY 1998 to report upon
the Commission's performance as it seeks to fully implement and address requirements of the Act.

The OIG continues to dedicate resources toward providing the Commission with contract audit
support services. In a climate of maximizing service and deliverables to our users while
downsizing the size of the Federal government work force, increasingly, functions are being
contracted out to the private sector. Furthermore, the Commission is actively involved in
upgrading our automated databases. Related systems development and implementation activity
requires a skill set which often can only be attained through program services contracts with the
private sector. While the OIG within the FCC is staffed with only seven (7) full time equivalent

positions (FTEs), the staff has significant collective experience in performing contract audits.
Utilizing the existing skill set, the OIG represents the Commission and the Federal government in
ensuring that required deliverables are produced in a timely and efficient manner and at a
reasonable and supportable cost. In this reporting period, the OIG identified questioned costs in
the amount of $12,420 and worked with management to secure unpaid remittances of $20,000
due the government from a contractor.

Audit reports can generally be obtained via the Internet at the FCC website: www.fcc.gov.
However, special review and audit reports which contain sensitive or proprietary information will
be restricted to specific individuals and organizations with a need to know.

SIGNIFICANT AUDIT ACTIVITY

1. SPECIAL REVIEW REPORT NO. 97-4: AUCTION APPLICATION

The report was issued February 9, 1998.

The objective of this special review was to evaluate the security of the FCC Auction Application.
The specific objectives of this effort were twofold. The objective of phase one was to identify and
evaluate the system of controls established within the FCC Auctions system application to ensure
that they provide a secure environment for participants in the spectrum auction process. To
accomplish this objective, system documentation was reviewed and system management personnel
interviewed to: (1) identify existing manual and automated controls; (2) design tests for each
control identified and conduct the test to determine operational status; (3) identify areas where
controls can be improved; and, (4) develop recommendations for specific control improvements.

The objective of phase two of the review was to examine the controls associated with system
operation and maintenance. These controls should assure that adequate processes were
developed for operating the Auction System and monitoring as well as controlling system
changes.

The overall conclusion of the special review was that the Auction Application remote bidding

software functioned as intended for auction bidders. However, control improvements were warranted related to segregation of duties, accountability within the application, adequacy of preparedness for contingency planning, and overall access controls. The report contained fifty-three (53) observations and recommendations, many of which had been adopted prior to report issuance. On March 13, 1998, the Wireless Telecommunications Bureau (WTB) provided further response to our report including specific steps being taken to address recommended corrective action.

This report contains sensitive information and will be released only to those organizations with a need to know.

2. AUDIT REPORT ON CONTRACT NO. FCC-93-17

The report was issued March 30, 1998.

The OIG audited Garcia Consulting, Inc. (GCI) costs claimed under selected delivery orders under FCC Contract No. 93-17. The primary purpose of the audit was to determine allowability of the costs claimed under this Time & Material (T&M) contract. The secondary purpose of the audit was to determine the nature, timing and extent of audit procedures needed in order to complete our cognizant audit responsibilities. The contractor provides mail room, data entry, and general support to the FCC as well as management analysis.

The auditors were able to verify all claimed costs pending a final incurred cost audit. However, the auditors discovered that the contractor was using higher direct labor billing rates for the Project Manager and System Analyst III labor categories than were approved by the Contracting Officer (CO). Based upon our report, the contractor and the CO agreed to review the direct labor rates and modify the contract as determined to be appropriate.

3. AUDIT REPORT ON CONTRACT NO. FCC-94-22, TASK ORDER 5 WITH SYMBIONT, Inc

The report was issued December 10, 1997.

At the request of the Chief, Acquisitions Branch, OIG auditors conducted a voucher review of cost incurred under task order five (5) of Contract No. FCC-94-22. This review was requested

because the contractor was claiming costs in excess of their original estimate and funding level.
The primary purpose of the audit was to determine allowability of the costs claimed under this
T&M contract from June 1995 through May, 1997.

OIG auditors found that the contractor did not adequately notify the government of a cost
overrun as required by the contract. Of the $99,725, claimed by the contractor, OIG auditors
questioned $12,420. The Chief, Acquisitions Branch and the contractor concurred with the audit
findings.

4. SURVEY OF MASS MEDIA BUREAU LICENSING OPERATIONS (OIG 97-15)

The report was issued October 22, 1997.

An audit survey as to the data integrity of the AM and FM Branch of the Mass Media Bureau
(MMB) licensing data bases was undertaken as a means of gaining familiarity and gathering data
in this area. During the survey, the auditors: (1) collected information on the MMB and the
Audio Services Division (ASD), on ASD licensing databases, and vulnerability assessments; (2)
reviewed results of the requirements analysis performed under contract by an FCC contractor,
Computech; (3) obtained and reviewed the Statement of Work for implementation of agreed upon
results of requirements analysis to be performed under contract by Intermetrics; (4) obtained a
current listing of all AM/FM stations in the Broadcast Application Processing System (BAPS); (5)
obtained a listing of fees paid by AM/FM stations during FY 1996; and (6) met with MMB
employees.

The results of the survey reflected that the licensing system maintained by MMB was in the
process of being modified by MMB personnel in concert with a contractor. Reportedly, the
legitimacy of licensing data will be validated within the scope of the work which will be performed
within MMB. A determination was made by the OIG to await the results of systems development
and implementation before expending further audit effort in this area.

5. MEMORANDUM REPORT: ITS INCORPORATED

The report was issued July, 1997.

On July 26, 1996, the FCC entered into a contract with ITS Incorporated (FCC 96-11) to provide the public with copies of licenses, lists of licenses and all manner of other FCC documents which are not restricted from public access. In response to allegations of contractual violations of terms related to ITS billing of FCC customers, the OIG performed an analysis of the contract and related deliverables to the public. While the allegations of contractual service violations were not fully supported, it was identified during the performance of the work that, under contractual provisions, the contractor was to remit to the Government approximately $20,000 for consolidated lease space at FCC facilities per annum. No record of payments had been identified nor had a mechanism been established to facilitate the payment which would be directed to the General Services Administration (GSA).

On October 7, 1997, the OIG was notified by the Chief, Acquisitions Branch, that rental payment from ITS Incorporated for $20,000 had been received. The OIG is continuing to monitor the performance of ITS.

INVESTIGATIONS

OVERVIEW

Investigative matters pursued by this office are generally initiated as a result of allegations received through the OIG hotline or from FCC managers and employees who contact the OIG directly. Investigations may also be predicated upon audit or inspection findings of fraud, waste, abuse, corruption, or mismanagement by FCC employees, contractors, and/or subcontractors. Upon receipt of an allegation of an administrative or criminal violation, the OIG usually conducts a preliminary inquiry to determine if an investigation is warranted. Investigations may involve possible violations of regulations regarding employee responsibilities and conduct, Federal criminal law, and other regulations and statutes pertaining to the activities of the Commission. Investigative findings may lead to criminal or civil prosecution, or administrative action.

The OIG also receives complaints from the general public, both private citizens and commercial enterprises, about the manner in which the FCC executes its program and oversight

responsibilities. All such complaints are examined to determine whether there is any basis for OIG audit or investigative action. If nothing within the jurisdiction of the OIG is alleged, the complaint is usually referred to the appropriate FCC bureau or office for response directly to the complainant. A copy of the response is also provided to the OIG.

ACTIVITY DURING THIS PERIOD

On November 8, 1997, Robert G. Andary, who had served as the Counsel to the Inspector General and AIGI, left the Commission to assume the position of IG at the Government Printing Office. Pending Mr. Andary's replacement, investigative assignments were discharged by the audit staff in concert with Federal, State and local government officials. Experience gained by the auditors from having previously served as members of multi-disciplinary investigative teams proved invaluable in their seamless assumption of primary investigative duties and responsibilities.

This reporting period saw the close of the largest investigative effort conducted to date by this office. The joint FCC OIG, FBI and DOJ investigation culminated with two parties external to the Commission pleading guilty to a multi-count felony indictment. Within the FCC, the OIG issued a related administrative investigative report which defined violations of applicable sections of the Code of Federal Regulations by four employees who served on the FCC Spectrum Auction Task Force. Additionally, these employees exercised questionable judgment and conduct which facilitated the commission of illicit activity against the FCC.

Two additional major investigations in the area of Commission employees accessing sexually explicit material via the Internet were closed during the reporting period. One of the two cases involves FCC employees' utilization of the FCC's Internet access capability to access sites containing pornographic material. The Chairman and responsible Bureau Chiefs were provided with the respective employee names for appropriate disciplinary action.

The second case dealt with an FCC employee at the Columbia, Maryland Field Office who used an FCC computer to download child pornography. This case was accepted

upon referral by this
office, by Maryland State and local officials. The subject employee
resigned from the Commission
effective October 31, 1997. On January 28, 1998, the former employee
was sentenced to
probation on the charge of possession of child pornography.
Additional charges are currently
pending.

The OIG was also active in investigating or referring to appropriate
authorities a number of
matters related to the planned move of the FCC headquarters to the
Portals.

SIGNIFICANT INVESTIGATIVE CASE SUMMARIES

In a matter referred to the U.S. Attorney for the District of
Columbia and jointly investigated by
the OIG and the FBI, a former FCC subcontractor and accomplice pled
guilty to Federal offenses.
The guilty pleas were entered in U.S. District Court in Washington
D.C. on August 25, 1997.
Leon Clements II (Clements) pled guilty to Mail Fraud and subscribing
to a false tax return.
Virginia Stephens pled guilty to aiding and assisting the subscribing
to a false tax return. During
this reporting period, OIG auditors continued to support the
investigation by developing
information to assist the court in establishing restitution
requirements for sentencing. The prime
subject of the investigation, Clements, an FCC subcontractor, was
sentenced on February 10,
1998, to serve 20 months imprisonment, make additional restitution in
the amount of $40,000 to
the FCC ($20,000 had previously been received), and assume a tax
liability to the Internal
Revenue Service (IRS) of approximately $168,000. Also, he was
suspended from performing
work for the Federal government pending permanent debarment. His
co-conspirator, Virginia
Stephens was sentenced on February 27, 1998, to five years probation
and ordered to make
restitution to the IRS of $21,348. She was likewise suspended from
performing work for the
Federal government pending permanent debarment.

The subject fraud was orchestrated by Clements while employed as the
Management Information
System Director at Tradewinds International, an FCC auction
contractor. In conjunction with
investigative activity, OIG auditors performed an incurred cost audit

and questioned costs of
$160,545. Tradewinds International reimbursed the FCC for $100,545.
The court held Clements
personally responsible for repaying the balance of questioned costs
totaling $60,000. Of this
amount, Clements has paid the FCC $20,000 and is under court order to
repay the remaining
$40,000.

On March 25, 1998, the OIG issued Investigative Report 96-2-A-04 to
the Chairman. The
investigation identified that specific FCC employees assigned to the
Spectrum Auctions Task
Force exercised poor judgment and violated provisions of the Federal
Acquisitions Regulations
(FAR), including the basic standards of conduct (FAR Subpart 3.101)
and Title 5 Code of Federal
Regulations (CFR) Part 2635 Standards of Ethical Conduct for Employees
of the Executive
Branch. This administrative investigation was initiated based upon
information provided to the
OIG of an improper relationship between an FCC employee assigned to
the Wireless
Telecommunications Bureau (WTB) and a WTB subcontractor, Leon Clements
II (Clements).
The OIG identified that Clements had a prior felony conviction in July
1992, for defrauding a law
firm of approximately $250,000. Subsequent to his conviction and
sentencing, Clements violated
terms of his probation and restitution requirements and was sentenced
to two years incarceration,
all but six months suspended, at the D.C. maximum security prison in
Lorton, Virginia. FCC
employees who became aware in their official capacity of (1) the
improper relationship between a
WTB employee and contract employee, and (2) that Clements was a
convicted felon, did not
notify their supervisors or the OIG, nor take appropriate measures to
protect the interests of the
government. Action taken by the OIG resulted in cost recoveries and
withholding of invoice
payments totaling $249,966.84, to date. Copies of the report were
provided to the Chief, WTB
and Managing Director for appropriate disciplinary action.

On March 31, 1998, the OIG issued Investigative Report No 97-4-C-08
to the Chairman. The
report summarized the results of the investigation of Commission
employees' utilization of the
FCC's Internet access capability to access sites containing
pornographic material. The

investigation was initiated in response to a complaint that pornography was being downloaded in violation of 18 U.S.C. 2251, entitled "Sexual Exploitation and Other Abuse of Children."
Although the investigation determined that many of the sites accessed by subject employees contained or advertised (in the case of pay sites) material which would be classified as "child pornography" as defined by Federal law, no evidence was developed that employees were downloading this material. However, the investigation did identify that individual employees were using the Internet during their official tour of duty to "surf" pornographic sites and, in some cases, download and store pornographic images and textual depictions of pornographic events on Commission computers. Such conduct is in violation of Title 5 of the Code of Federal Regulations (CFR). Specifically, this conduct violates 5 CFR 2635.704, entitled "Use of Government property" and 5 CFR 2635.705, entitled "Use of official time". Additionally, use of the FCC's internet access capability to "surf" pornographic web sites violates FCC regulations as defined in Directive FCCINST 1479.1, entitled "FCC Computer Security Program". The Chairman, Chief of Staff and responsible Bureau Chiefs were provided the names of the violating employees and pertinent information to use as a basis for taking appropriate administrative disciplinary action.

On September 13, 1996, the OIG received an allegation that a watch officer at the Commission's Columbia Operation Center was downloading child pornography onto a Commission workstation using a private Internet account. Working with Federal and local law enforcement, OIG investigators monitored the activity and recovered materials from the employee's workstation after business hours. This material was presented to local law enforcement in Baltimore County, Maryland, and on February 17, 1997, a search warrant was executed at the subjects home in Baltimore County, Maryland. During that search, numerous computers, peripherals, and computer files were seized. On March 6, 1997, a search warrant was executed on the subjects private file drawer at the Columbia Operations Center. During that search, twenty-three (23)

diskettes were seized.

During the period the case was being prepared for presentation to local prosecutors, FCC officials placed the employee on administrative leave and temporarily suspended his security clearance, pending termination proceedings. On October 31, 1997, the employee resigned from the Commission.

On June 4, 1997, the employee was charged in the District Court of Maryland for Howard County under Article 27 419A of the Maryland Code of 1957, entitled "Child Pornography", and Article 27 419B, entitled "Possession of visual representations of persons under age 16 engaged in certain sexual acts." On January 28, 1998, the case was heard by Judge Neil Axel of the District Court of Maryland for Howard County. In that proceeding, the employee agreed not to dispute the government's case and was given probation before judgment on the charge of possession of child pornography, ordered to pay fines and costs totalling $305, given supervised probation for eighteen months, and directed to continue counseling sessions and to remain on prescribed medications. On March 11, 1998, the employee was charged under the same statutes in Baltimore County, Maryland, for materials recovered from the employees residence. This case is scheduled for trial in June, 1998.

On October 27, 1997, the OIG referred a case to the Federal Protective Service (FPS) related to the theft by a former FCC co-op student of five (5) Equalnet calling cards which had been mailed to the FCC along with a letter of complaint. Investigative analysis disclosed that the co-op student, had used the stolen calling cards to make personal phone calls in the amount of $436.32. Additionally, the former co-op student had violated Directive FCCINST 1185.2, entitled "Authorized Use of Government Telephone Systems" by using an FCC telephone for personal calls not related to official FCC business amounting to $723.93. On January 5, 1998, an arrest warrant was issued. Subsequently, the subject agreed to make full restitution to both the FCC and Equalnet in April 1998, in lieu of being arrested. Upon remittance of full payment totaling $1160.25, the case will be closed.

An investigation (OIG No. 98-2-C-04) was initiated based upon referral from the Commission Secretary of an apparent attempt by an FCC employee to distribute the Daily Circulation report dated March 4, 1998, outside of the FCC. After a thorough investigation, the OIG did not identify inappropriate activity on the part of any FCC employee. Additionally, there is no indication that the subject report, inappropriately addressed to an individual external to the Commission, actually left the custody of the FCC. The OIG noted that the Daily Circulation Report had no markings to indicate that the report was for official use only. Therefore, to mitigate the potential for future inadvertent mishandling of the report, the Commission Secretary was advised to stamp each one in the future "For Official Use Only". This practice has been implemented.

An investigation referred to the Public Integrity Section of the Department of Justice Criminal Division in December 1994 remains open pending final action by prosecutors. The matter involves a potential post-employment conflict of interest violation by a former FCC official.

In response to a request from the House Committee on Transportation and Infrastructure dated February 18, 1998, the OIG is currently engaged in investigative activity related to the Portals development project. The Committee has requested that the FCC OIG examine (1) the leak of a security report prepared by a Commission contractor to the media and, (2) efforts on the part of the current landlord to enlist and empower FCC staff to derail the planned consolidation of the FCC to the Portals. Additionally, the FCC OIG has referred allegations to the OIG at the General Services Administration (GSA), of potential improper procurement practices to include lack of adequate support for change orders related to the Portals contract.

HOTLINE CALLS

During this reporting period, the OIG Hotline Technician received eighty-eight (88) hotline calls to the published hotline numbers of (202) 418-0473 and 1-888-863-2244 (toll free). The OIG Hotline continues to be a vehicle by which Commission employees and parties external to the FCC can contact the OIG to speak with a trained Hotline Technician. Callers who have general

questions or concerns not specifically related to the missions or functions of the OIG office are referred to the FCC National Call Center (NCC) at 1-888-225-5322. Examples of calls referred to the NCC include complaints pertaining to customers phone service and local cable providers, long-distance carrier slamming, interference, or similar matters within the program responsibility of other FCC bureaus and offices.

LEGISLATION

OVERVIEW

Pursuant to section 4(a)(2) of the Inspector General Act of 1978 (IG Act), as amended, our office monitors and reviews existing and proposed legislative and regulatory items for their impact on the Office of the Inspector General and the Federal Communications Commission programs and operations. Specifically, we perform this activity to evaluate their potential for encouraging economy and efficiency and preventing fraud, waste, and mismanagement.

ACTIVITY DURING THIS PERIOD

The Counsel to the IG continued to monitor legislative activities affecting the activities of the OIG and the FCC.
MANAGEMENT AND ADMINISTRATION

During the six-month reporting period covered by this report, the FCC OIG has continued to dedicate staff towards assisting the agency in areas in which our expertise can provide benefit. This emphasis is perhaps best reflected in two major projects, the Field Inspection Program (FIP) and the Collections System Steering Committee.

Field Inspection Program (FIP)

On October 28, 1997, the OIG issued the Final Summary Field Inspection Report (FIP-97-8) to the Chairman and Chief, Compliance and Information Bureau (CIB). The FIP is a program by which OIG staff travel to field offices and resident agent locations to perform comprehensive inspections. The inspection team visited the following locations:

South Central Regional Director- Kansas City, Missouri
Western Regional Director- San Francisco, California
Kansas City Field Office

Tampa Field Office
San Francisco Field Office
San Diego Field Office
Miami Resident Agents
Norfolk Resident Agents
Houston Resident Agents

Prior to OIG traveling to the field, detailed interviews were conducted with personnel within the CIB, to whom field personnel report. Additional meetings were held with senior officials from most headquarters bureaus and offices. The focus of these interviews was the identification as to the services that CIB was performing for other bureaus and offices and the connectivity between the field and headquarters.

At each location a detailed checklist, developed to assess compliance with Federal government and internal FCC rules and regulations, was completed. The team conducted interviews with FCC staff and persons/organizations serviced by the field (to include Federal and State agencies and entities and Congressman Pickett of the Second District of Virginia) to obtain feedback on operational effectiveness and efficiency and identify impediments which may exist to the realization of optimal performance. The FIP team also searched for the best practices which may be transferable from one field location to another. Likewise, the inspection team sought to identify impediments to effective and efficient operations of field personnel.

Our findings indicated that a lack of connectivity existed between the field and CIB headquarters, and between CIB and other bureaus and offices. Field personnel spoke of the need to integrate themselves and their mission with the rest of the FCC and see this as their best defense against further CIB retrenchment. Yet, bureau and office managers interviewed generally had a very limited perception as to what CIB does and what they are capable of doing. Furthermore, they were not familiar with efforts on the part of CIB headquarters to develop such requirements. The report also noted that CIB personnel spoke of meager financial resources in terms of equipment, travel and training, and that their budget would to an impartial observer appear to support this perception.

At the conclusion of field work, a meeting was held with the Chief, CIB and a number of his senior managers. There was general concurrence with the findings of the Inspection Team. It was noted that CIB had performed an internal analysis and identified many of the same issues as the OIG. A copy of CIB's Summary Report entitled "Challenges For Change - Forging An Enhanced Direction" was incorporated as an Attachment to the OIG report.

Collection Systems Steering Committee

During the current reporting period, an OIG representative continued to chair the Collections Steering Committee. The mission of the Collection System Steering Committee is to (1) conduct an objective assessment of the Commission's collection system; and (2) advise management on alternative courses of corrective action.

As addressed in our previous semiannual report, in May 1997, the OIG initiated a special review of the Commission's collection system. The Collection System had originally been developed to meet requirements related to fee collections. The functionality of this system was significantly impacted upon by Congress with the passage of the Omnibus Budget Reconciliation Act of 1993. In compliance with the Act, the FCC initiated the auctioning off of designated spectrum. FCC auctions have resulted to date, in the award of more than 4,300 licenses to auction winners netting bids of $23 billion with about $12 billion of this amount collected for the U.S. Treasury.

During initial briefings with senior officials within the Office of the Managing Director (OMD) and Wireless Telecommunications Bureau (WTB), the OIG special review team became aware of an on-going effort by WTB and OMD to "engage a Contractor with government financial management consulting and system design expertise to evaluate the current Collections System with respect to the FCC's financial accounting requirements and operational management and data requirements of the operating bureaus with emphasis on the Auctions Division of the Wireless Telecommunications Bureau (WTB)." Using the results of the analysis, the contractor was to "make a recommendation to the FCC to either modify the current system or create a totally new

collection system." Recognizing that, with some exception, the proposed task order duplicated significant portions of our on-going effort, the Inspector General met with the Deputy Bureau Chief - WTB and the Associate Managing Director - Operations, and agreed to modify our project to incorporate those elements of the proposed project which were not being addressed. In addition, recognizing the capabilities of the OIG, a determination was made by management to establish a high level steering committee, facilitated by a member of the OIG.

On October 1, 1997, a briefing was held for senior management in which the Collection System Steering Committee reported upon the preliminary results of the collection system project. In that briefing, it was reported that the current collection system does not meet Commission requirements and that the system cannot be upgraded to meet current and projected requirements. The Committee further reported the results of their assessment of commercially available products and provided recommendations for the identification, selection, and implementation of an off-the-shelf system. Since the October 1, 1997, briefing, the Committee has been working to facilitate completion of the data integrity portion of the review, develop position descriptions and staff a team to select and implement a new collection system, and draft a final report summarizing the results of the project.

Ethics Reminder to FCC Employees

On March 23, 1998, the Inspector General requested that the Ethics Officer assigned to the Office of the General Counsel incorporate specified language in the Commission's Ethicsgram to reiterate that "the Inspector General relies on the full cooperation of all individuals and organizational entities within the Commission. Requests for information, interviews, documents, etc. should be met in a timely and open manner. Employees with knowledge of possible fraud, waste, abuse or wrongdoing within the Commission are expected to inform the Inspector General immediately...." On April 1, 1998, the aforementioned language was incorporated in the April Ethicsgram transmitted to all FCC employees.

SPECIFIC REPORTING REQUIREMENTS OF SECTION
5(a) OF THE INSPECTOR GENERAL ACT

The following summarizes the Office of Inspector General response to the twelve specific
reporting requirements set forth in Section 5(a) of the Inspector General Act of 1978, as
amended.

1. A description of significant problems, abuses, and deficiencies relating to the administration
of programs and operations of such establishment disclosed by such activities during the
reporting period.

No such problems, abuses, or deficiencies were disclosed during the reporting period.

2. A description of the recommendations for corrective action made by the Office during the
reporting period with respect to significant problems, abuses, or deficiencies identified pursuant
to paragraph (1).

No recommendations were made. See the response to paragraph (1).

3. An identification of each significant recommendation described in previous semiannual
reports on which corrective action has not been completed.

No significant recommendations remain outstanding.

4. A summary of matters referred to prosecutive authorities and the prosecutions and
convictions which have resulted.

The potential violation of post-employment restrictions referred to the Public Integrity
Section, Department of Justice, on December 5, 1994, is still pending a prosecutive decision by
the Department.

In a matter referred to the U.S. Attorney for the District of Columbia and jointly
investigated by the OIG and the FBI, two former FCC subcontractors pled guilty to Federal
offenses. The guilty pleas were entered in U.S. District Court in Washington D.C. on August 25,
1997. Leon Clements II pled guilty to Mail Fraud and subscribing to a false tax return. Virginia
Stephens pled guilty to aiding and assisting the subscribing to a false tax return. Restitution to the
FCC was part of the plea agreements. Leon Clements II, was sentenced on February 10, 1998, to

serve 20 months imprisonment, make additional restitution in the amount of $40,000 to the FCC ($20,000 had previously been received), assume a tax liability to the Internal Revenue Service (IRS) of approximately $168,000 and, debarred from performing future work for the Federal government. His co-conspirator, Virginia Stephens was sentenced on February 27, 1998, to five years probation and ordered to pay restitution to the IRS of $21,348. She was likewise debarred from performing future work for the Federal government.

On June 4, 1997, based upon OIG referral, an FCC employee was charged in the District Court of Maryland for Howard County under Article 27 419A of the Maryland Code of 1957, entitled "Child Pornography", and Article 27 419B, entitled "Possession of visual representations of persons under age 16 engaged in certain sexual acts." On January 28, 1998, the case was heard by Judge Neil Axel of the District Court of Maryland for Howard County. In that proceeding, the employee was given probation before judgment on the charge of possession of child pornography, ordered to pay fines and costs totalling $305, given supervised probation for eighteen months, and directed to continue counseling sessions and to remain on prescribed medications. On March 11, 1998, the employee was charged under the same statutes in Baltimore County Maryland for materials recovered from the employee's residence on February 17, 1997. This case is scheduled for trial on June 18, 1998.

5. A summary of each report made to the head of the establishment under section (6)(b)(2) during the reporting period.

No report was made to the Chairman of the FCC under section (6)(b)(2) during the reporting period.

6. A listing, subdivided according to subject matter, of each audit report issued by the Office during the reporting period, and for each audit report, where applicable, the total dollar value of questioned costs (including a separate category for the dollar value of unsupported costs) and the dollar value of recommendations that funds be put to better use.

Each audit report issued during the reporting period is listed according to subject matter

and described in part II, above.

7. A summary of each particularly significant report.

Each significant audit and investigative report issued during the reporting period is
summarized within the body of this report.

8. Statistical tables showing the total number of audit reports with questioned costs and the total
dollar value of questioned costs.

The required statistical table can be found at Attachment A to this report.

9. Statistical tables showing the total number of audit reports with recommendations that funds
be put to better use and the dollar value of such recommendations.

The required statistical table can be found at Attachment B to this report.

10. A summary of each audit report issued before the commencement of the reporting period for
which no management decision has been made by the end of the reporting period (including the
date and title of each such report), an explanation of the reasons such management decision has
not been made, and a statement concerning the desired timetable for achieving a management
decision on each such report.

One audit report meets this criteria. The Report on Incurred Costs for Fiscal Years 1995,
1996 and Short Year 1997 (OIG 97-18) was issued in September, 1997. This incurred cost audit
identified questioned costs of $265,180. The Chief, Acquisitions Branch advised the OIG that the
contractor has indicated an intent to contest the findings contained in the subject report. Her
office will be meeting with the Office of General Counsel to discuss the FCC's recourse should the
contractor adopt this position.

11. A description and explanation of the reasons for any significant revised management
decision made during the reporting period.

No management decisions fall within this category.

12. Information concerning any significant management decision with which the Inspector
General is in disagreement.

No management decisions fall within this category.

2000. Re: Open letter to ARRL, FCC

Newsgroup: rec.radio.cb

>I see no reason why you can't brag about a 30WPM award the same way as you
>would a DXCC or your 2x1 callsign.
>
The ARRL has been passing out code proficiency wallpaper for eons.
w1aw broadcasts code tests up to 40wpm, other organizations do the
same thing to higher speeds. The difference between a piece of
wallpaper nobody sees and a distinctive callsign is that the callsign
is the first and last thing the world hears when you jump on a freq.
>
Brian Kelly w3rv

Am I totally all wet on this?
>
>The bottom line is the FCC doesn't care how hard you worked,
>nor are they interested in certifying your skills to other hams or
>impressing your buddies with your high-class callsign.
>They just want to be sure you pass muster. They issue the
>ticket as a permit to allow you on the air, plain
>and simple. You meet some minimum standard, and you're in just the
>same as the guy who got every question right and 100% copy on the
>code test. (This "Pass/Fail" phenomenon at the DMV explains a lot about
>what
>passes for driving in Calfornia, but that's a whole other digression.) ;)
>
>If the ARRL was so eager to nurture and protect the Code, they ought to get
>off their
>collective butts and find ways to recognize hams who DO use the code. The

You can get all that here in the US new for less money than that.And
with the new regs why would anyone want a 1 to 3 band HF rig? Just ask
rat shack,thier new 10M mobiles were selling like hotcakes till the
restructuring was announced.

Depends on the box.

The common "mass produced" (Texas Star, Messenger, etc.) use the common
torroidal combiner system using a torroidal transformer.

Some types of the battle box (DaveMade and Cookie's come to mind) use the
more esoteric multiport combining method, whereas it is a true combiner.

More info about the multiport can be had from Motorola jsut for the asking.
I can dig the app note out if your interested.

Any amp with 572s is worth having but Dentrons had some major problems
so don't bring much.I have a good working Heathkit but know the Yaesu is
a better protected and built amp.
I don't agree with your end use.

Pierce Simpson was a decent radio back in the day.

Who made them..:

A company called Cybernet Electronics made them... Cybernet was always easy to spot, as they used a PC board that had the schematic **usually** printed on the top side of the board!

They where a decent radio, but always seemed one step behind Uniden where RX was concerned, and you rarely could get the power up as high as a Uniden... I liked the tonal quality of their transmitters better than what you have today, though.

Alas, Cybernet is no longer, but the Jimmy Peng radios of today bear a striking resemblance to some of the old Cybernet radios of yesteryear... The exports, that is!

You claim in another post that they do 300 watts average.

What would that be when measuring Peak Envelope Power?

Wait... Right about 700+ watts.

So, fuck yourself...

You don't even know the correct way to measure an AM signal, do you.

(Their shouldn't be a "?" mark at the end of that last sentence. I wanted
it to be presented as a statement of fact.)

They can't drop the code requirement because of international treaty..

Of courese, in the land of Texas Star 667s only doing 300 peak watts, this treaty might not hold up.

I have seen quite a few that will do 300 on a bird 43, this is a very common output reading for a 667. This guy must of had a voltage drop problem or the same set of meters both times, maybe he was using some crummy inaccurate meters.

I have a Wawasee watt meter scope combination. The watt meter goes to
2000W.
The unit works 100% and is in good shape physically. I am going to sell
this unit,and I need to know what it is worth.
Thanks, Mr.Evo

The K 40 is a good choice. It works well for the specifications. I prefer the Wilson 1000 and the 2000 series.
I have looked at the performance of both, the pros and cons. The Wilson give me greater range over several frequencies without distortion. Say 40-50 miles or more during peak skip for local communication on a Saturday afternoon.

As for the K 40, yes it breaks, so does any antennae if abused. The choice is really up to you. Look at the alternatives and select the best one for your needs.

I have reciently got into a nasty fight with my neighbor about putting
a tower up for my CB. He said if I'm Bleeding into anything he has he
will call the FCC. I don' even Speak to him any more so I don't Know if
I bleed on him, But I'm bleeding on my phone (900mhz Cordless). I'm so
paranoid to even use my radio which I so much enjoy.
It's a cobra 148 GTL w/ uppers and lowers installed, Power mic, swings
20 watts w/ adjustable modulation which I have turned all the way down
and still bleeds. don't know what to do is ther a filter that will take
care of this?

Nothing. If it sounds ok, then it sounds ok. Bear in mind that most Cber's do not know how to give an accurate radio check over the air. Some might say "you're blowing smoke!" yet you're a block away from them.

What I would do is have a buddy of yours key your radio and ask for a radio check from the same guys you asked while listening in on another radio and compare audio clarity and signal readings. If they say your buddy sounds ok but the audio quality sounds ten times better than those that gave your buddy a radio check, then make your conclusion. There is only so much you can do to your unit. You can make the radio swing, but anymore would be a waste of time.

137... back out!!!

Hi Tim,
Are your batteries fresh? The output power drops dramatically when the
battery power declines. Also the little tiny rubber antennas severely
limit how much power ca get out.

J.B.

How much power are running to achieve the "killing" of their radios? - I hate the idiots who keep on driving around at night with their stereos running power levels in the KW range so I would quite enjoy stopping them or at least making them worried that they have broken their radios. Next stage - work out how much power is required to screw their car radios up when they are playing their CD's - or even activate their car alarms - what an amusing sight that would be.

Matt

Frankly, the FCC has not gone far enough. I have several times tried and failed to learn code. I start having problems with 4 tone characters. What bothers me is the continued restriction of certain bands and modes because I can't use code! That is total BS. Let the FCC designate certain bands/sub bands as CW only and let that be self policing. If you can't send code others wont try to communicate with you. What the hell does my ability or inability to send code, even at 5 WPM, have to do with my ability to use phone on 10M? If the FCC and ARRL want to improve the art and make sure only qualified operators get Ham tickets, make the tests more technical. Don't make people like me operate only 11M because of this antiquated way of thinking. Hell, even the US Navy has dropped the use of code!

John

Shipping/handling/6.25% Utah Sales tax.?
You must be in a business, Is that why you charge sales tax?
If not in a business, You might want to kill your prices a little bit
because you can get new antron 99's from a dealer for nearly $10.00
less.

Not any more! All that's required is the determination to
make the necessary memorizations, and to stay with the
program until it's done. At which time no one will be able
to determine, without some sort of additional testing,
whether the newly licensed Extra has learned anything at
all! Now, the only differentiation among the amateur license
classes is merely "Did you memorize 35, 70 or 120 question
and answer pairs?" Neat!

> However, they are entry
> levels to their enhanced privileges. In no sense are they graduation
> certificates, or proof that someone has achieved something great in
> technology development.

You don't say. I guess that's why all the newcomers come to
the old Extra with all their questions and problems- or once
did. Evidently they hadn't learned that he was just a
beginner, too. What drivel.

> Amateur radio never was meant to be a college
> degree.

For most radio technical people over the term of its
history, a college degree just wasn't in the scheme. Nor did
it need to be. Yeah, we know those of you who came along
later would like to change that. And as far as ham radio is
concerned, you got it done.

> The only applicability of an amateur radio license to the
> commercial world that I know of is that an Extra will get you a *Third*

>

Well, Hoop de do! That just shows how much disdain you
"engineers" have for any non-engineer. We just don't count.
Fine, I sure don't need your "Narte" nasty and wouldn't have
it. I had a First Phone that the FCC junked, the same way
they just did to the Extra class ham license. Whatever

little technical prestige Extra had remaining, and after 15 years of Question Pools there sure wasn't much, is now gone to the same junkpile. RIP. It was once upon a time a Very Good Thing. Now it's nothing.

2053. Midland 75-810 and handheld CBs in general

Newsgroup: rec.radio.cb
Date: 2000-01-14 00:00:00 UTC
From: Tim Dunfee <tdunfee@zoomnet.net>
Message-ID: <01bf5e2a$1c6ce840$511e20d0@tdunfee>
Source record: 19902
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb

I have a pair of Midland 75-810 CBs. Their maximum useful range is from one end of the house to the other. Well, that's a slight exageration, but the max useful range is actually about 100 yards. At about 150 yards the signal strength meter does not even register. Is this typical of handhelds?? I believe Midland's advertised range for this pair is "up to 2 miles."

My environment is about as friendly as it gets: on a clear ridge in a rural area--shouldn't be any RF interference here and have line of sight. I've tried them on the road in numerous places with about the same results.

The pair of Kmart walkie-talkies my brother and I had as kids work as well as this pair does. At least the weather band comes in nicely. (Weather band broadcasts from about 20 miles away if that is of interest.)

Well, anyway, thanks in advance for all comments and suggestions.

- Tim

IMHO - Stay away from the Dragon. I had two, at different times, and they worked OK but proved to not be durable. They did not last long. I now have a Galaxy 225 that works great and has lasted. Turn it on Low Power and it shouldn't tax your amp output too much.

2056. Re: how much drive can a texas star 667v handle?

Newsgroup: rec.radio.cb
Date: 2000-01-14 00:00:00 UTC
From: cobra@budweiser.com
Message-ID: <387e6fe6.3745427@news.thegrid.net>
Source record: 19905

As I stated in a previous post, I owned three 667v's and all stock
would put out an avg of 600 watts and peak 700 watts. I had one of
them modified by a friend without changing the 2sc2879 pills and got
an avg of 900 give or take 50 peaking to 1100 watts.
Also stated in a previous post, I owned 2 new dx350's and got more
than what your 667v is. A 667v is a low drive linear. Meaning it has
its own driver built in to it. Start at 3 watts drive and slowly
increase power by 1 watt increments until you get your desired
operation without sounding overmodulated and distorted and fuzzy!
Over driving a linear will cause severe TVI and will piss your
neighbors off. Try to keep the driving radio down below the max drive!
Texas Star 667v is rated somewhere around 4-8watts but I having owned
3 of these notice 3 watts is perfect and anymore creates havoc.

Does ANY job come without further training? None that I
know of.

> If they had to train you, then you cannot now claim that passing the
> ham license exam was evidence of electrical skill since those
> organizations did not take that license as proof of electrical skill.
> For those organizations, that license was only proof that you had some
> basic understanding of basic electronics and therefore would be easier
> to train than another person.

Well, well! And today, that can't be assumed, without
further testing. Once a ham radio license conveyed some
minimum level of knowledge and skill, in most cases. Today,
no employer who knows what has happened over the past couple
decades would consider awarding that 'credit' without other
independent confirmation.

> And the ham license of today still serves that purpose.

I'm afraid not. Today's ham license proves only that
licensee was only at least minimally interested in radio,
enough that he completed the licensing process. The FLAWED
licensing process.

However, it
> plays less of a role in the hiring process today simply because radio
> plays less of a role in an electronics career today.

There are fewer two-way radios in use today? What rock you
been hiding under? And there aren't a mass of wireless
services that have sprung up overnight? These are not
"radio"?

Years ago, because
> of the greater role radio played in an electronics career, many more
> organizations were willing to give credit for any radio training (no
> matter how basic). Since radio plays less of a role today, fewer
> organizations give that credit (even those who did years ago).

Your conclusion is true but you erred in your reasoning.
Radio is more widespread than ever, in every area of life.
Even the dreaded HF telephone wireless modems are radio.

> I also think you're being a little disingenuous here, Dick. After
> working at a radio/tv repair shop, graduating near the top of your
> electronics school class, and working in electronics in the military, I
> really doubt that the ham license really played that much of a role in
> your later employment at that "good technical job."

You'd be wrong. And to top it off, they even gave me a
Morse code exam!
The organization had discontinued the use of Morse not long
before, but still retained it as a backup to wireline
teletype. ALL the officials who were involved in the hiring
process were longtime hams themselves, and knew all about
what a ham ticket meant *then*.

> The simple fact, whether you want to admit it or not, is that the ham
> license exam has always been an extrance exam into the world of hobby

> or commercial radio personnel.

That is neither a simple nor a complicated fact, in fact it
is no fact at all. Just as Novice was the preferred entry
point into ham radio, a ham license was once the preferred
entry point into commercial radio and electronics. The
commercial exams came later (been there too). THAT is what
has changed.

> With that in mind, the existing license exam system serves its > purpose well.

Sure does. It sets the ARS up for making our frequencies
available for reallocation to commercials, since such a
trivialized "service", now easily equated with other trivial
services such as the Citizens Band service, is much less
valuable in its own right. Only ours has VAST SPECTRUM
available for the taking. FCC has just completed the setup
by doing exactly the oppositee of what they said - they have
made the Amateur Radio Service a **NON-technical** entity,
and you have just helped to confirm it all.

I'd imagine the Question Pool Committee will further
confirm it after April 15.

Heh! that could be tried! But it still might not work since I had many radio's on well connected, grounded and excelent SWR would still bleed even stock!

For the station asking for help! try the above and if it still doesnt work, turn your output down! Also putting your aentenna higher will help, It did with mine!

>refering to WILSON about gain claims, not FIRESTIK.

Well... Okay, maybe I was a bit ruff on 'em.....

But if 1/4 wave at CB frequency = 102"(+ or -)...
How then do you figure a 2', 3', 4' etc etc 5/8 wave antenna????
5/8 wave antennas are considered GAIN antennas in anybody else's
catalog... but I don't see to many REPUTABLE companies claiming that
their 1/4 wave, end loaded antenna is a 5/8 wave (typical 3dbd gain).

Below is a quote from their website......

>First of all, it is common knowledge that a top loaded antenna out performs
base, >center or continuos load antennas....

No argument here.... but an end loaded 1/4 wave antenna (which is what
they're sellin') WILL NOT outperform a full size 1/4 wave whip on a vehicle
where clearance is not a concern.

>Secondly, when you feed the base of our antennas with a relative high
current to >voltage ratio, as the current slows due to the electromagnetic
resistance created in >the loading coil, the RF voltage radically increases.
Increased voltage relates to >increased performance.

Current slows?!? Notice they call it a loading coil.... a 5/8 wave antenna
generally requires a matching network at it's base because it does not
represent a 50 ohm impedance... do you see any matching networks?

>care of this?

Try http://www.k-comfilters.com for filters for your neighbor's phones if that's a problem... I wouldn't put 'em in myself unless you want him blaming you every time a phone dies, but you might offer them.

http://www.aesham.com also sells a complete line of various brands of filters.

The other suggestions listed here are VERY valid... overmod is a cause of many problems with neighbors.... Put the limiter back. Try lowering power. If TV interference is a problem try a lowpass filter in your coax (well grounded) and maybe hi-pass filters on neighbor's TV. Putting your antenna higher might help too. If you're REALLY worried about the problem, you're gonna have to talk to your neighbor and find out what's goin' on over at his place..... could open a can of worms!!

Yes the mic can be powered by the radio, but you might run into a problem with that due to AC hum or Alternator noise depending if you gonna use it for mobile or base! Dont be dissapointed when you find out you need to buy a 9volt battery for the mic. Some cases, powering the mic by the radio has worked good and can be easily done, but they dont come stock that way. As for anything else to be done? Dont know till you get the radio up and running to find out!

No, but if you've made the effort to learn and understand the theory (and not
to memorise the questions) it's something you can be proud of perhaps.
In VK when you get your license you get both the station license
and a certificate of proficiency. The unrestricted license is the
"Amateur Operator's Certificate of Proficiency" for example. This is
actually quite a nice certificate, with the seal of the ACA etc.

Hi, People!

I'd like to very respectfully and with no malice aforethought <bwg> request that there be some "tailoring" of cross-postings.

I'm over on "rec.radio.shortwave" and there is all sorts of "ham" stuff being cross-posted to it that have nothing to do with SWLing but only with hams.

I think y'all are great and I owe my interest in SWLing to hams but if I wanted to be "in" on ham stuff, I'd subscribe to ham newsgroups.

When I got on the Internet in 1989, this wasn't a big deal as the ng's were so small but - in 2000 - this x-posting really bogs everything down.

As I said: no flame, just a respectful request.

Many thanks,

Gray

There are hundreds and hundreds of murders each year, and many dozens
go unsolved. By your logic, we should get rid of the laws relating to
murder - they are "unenforceable." Just because some people break laws,
and never get caught, it does not mean that we should just trash the laws.

Now, if you want to talk about unfair laws, or laws that serve little
real purpose, then we might find some area of agreement.

At the present time, the FCC has not announced any change in the written exams. However, even if new exams come out at that time, the exam you take now should still be valid even after the change. The FCC has always honored exams taken just before any change in the material, so I doubt you will have a problem this time.

We were talking about all this in the context of a new operator, not
the existing operator (the original message was from a person preparing
to take his exam in the future - which very soon will mean the new
license system).

As for the HF access for the Novice and Tech Plus, I've already
addressed that in another message.

Ken, worth is something that you have to determine. Aside from the
legal aspects, there is a greater chance of having RFI problems with
the neighbors when running higher power. As far as transmittting
farther than you can recieve, that depends on who you are talking with.
Are they running any power? Also, bases usually have better ears than
mobiles. So, your base may be able to hear mobiles running low power
that are unable to hear your base running low power. Just a few things
to ponder.
73, billn6vlr

Yup, batteries were fresh. I even tried with the cigarette lighter adapter on one radio and the other plugged into the wall. I suspected the antenna... I took both antennas off the radios and tried it that way. (I thought the antennas might not have been getting good connections.) I got about 50 feet without any antenna. I'll bet you are right.

Do I have any options with handheld antennas? What about magnetic mount antennas with a bnc connector? Are they available?

Thanks.

Pick a copy of the amateur radio magazine QST from the American Radio Relay League (ARRL)(www.arrl.org). They have companies advertise filters for this type of problem. They also sell a book in interference, but check your local library instead of buying it. The FCC also has a free publication on interference, I suggest you order one for yourself and your neighbor. I explains some of the liability in it. Finally, contact your phone manufacture. They may have mods for free for problems like this.

As a courteous, you may want to work with your neighbor if he has a problem. If the fix is cheep, i.e. free mod from manufacture, or a $5.00 filter, pay for it. If it is something more, say $40.00, offer to split the cost. Try to work a schedule. If he is really into sports, don't get on the air during Monday night football or something else.

If your station is clean and he won't cooperate, don't argue, but sternly tell him you are willing to work with him but to go read the literature on his equipment or on the back/bottom of it and let him know the FCC states that he and his equipment is responsible for the problem and federal jurisdictions take precedence over local courts. If it come down to this, let your local police and city counsel know your efforts to cooperate and resolve the problem so this doesn't become a "zoning" issue or police issue.

Despite many amateur radio operators dislike of CB operators, contact a local club and see if they would be willing to help, you would be surprised most will without any problem.

Good luck,

Dennis WB3KUM/9

Dick,

I think you're downplaying your own abilities and attaching too
much importance to the license. Sure, the license, especially in
the past, was a 'flag' indicator of certain abilities, but that hasn't
been true for years. I think the status of a HAM license as a
flag of technical competance went out the window in the 60's,
when consumer technology moved away from 'hand wired chassis'
and tube technology. Not that HAMs changed any at that time,
but the public perception of 'high tech'. And over the years it's
further changed.

Mike

But prior to April 15th, that "+" on the Tech license only got a
tiny sliver on HF voice. (I don' t count 6M as HF, it's really a low
VHF)

Now that 5WPM gets a LOT of HF voice.

I think it depends on the question pools. They are reportedly
changing April 15th as well. So with that consideration, the
certificate for succesfull completion of the old exam may or
may not be valid April 15th. It really depends on if the FCC
declares the question pool 'different' in it's nature, or just
a new mix of questions.

But if you passed it already, it should be easy to pass again,
right? And not near the pressure this time.

Does anyone out there know any Distributors or anyone else that has NEW decent quality AM / FM / Cassette CAR Stereos that are NOT made in RED Communist China ? Pyramid went there & I can't sell them anymore because I'm not selling China made Junk any more that IS cheapened up, like your Cobra CB's !

Please e mail me with Dist. names & phone numbers and / or store names that would have something like this, in a $50 to $110 or so unit, or even that costs more $$ I'll consider. Please RUSH !!!!!
Thanks
Dave

Your CSCE is good for 1 year from the date of it's issue.
If you took the exams 16 months ago, you will have to re-test.

But do it now before the new question pools come out.
Word on the street is that they are going to be really tough.

Good Luck!

Phil AKA: KKC4849 (Calamity), KA1NHZ, AFA1MY (MARS), Patriot 655 (CAP)

Key up your radio when you know he might hear you and act like your talking
to a friend and say:
WELL I JUST GOT OFF THE PHONE WITH THE FCC AND THEY TOLD ME THE PROBLEM IS
MOST LIKELY IN MY NEIGHBORS LOW QUALITY EQUIPMENT, AND I SHOULD HAVE NOTHING
TO WORRY ABOUT. BUT ALTEAST I GOT IT ON RECORD THAT I MADE THE EFFORT.
You neighbors will probably stop harassing you. It worked for me.

"WB3KUM" <d.breeden@nospam.wcom.com> wrote in message
news:387F30AA.553B6CDD@nospam.wcom.com...
| Pick a copy of the amateur radio magazine QST from the American Radio
| Relay League (ARRL)(www.arrl.org). They have companies advertise
| filters for this type of problem. They also sell a book in
| interference, but check your local library instead of buying it. The
| FCC also has a free publication on interference, I suggest you order one
| for yourself and your neighbor. I explains some of the liability in
| it. Finally, contact your phone manufacture. They may have mods for
| free for problems like this.
|
| As a courteous, you may want to work with your neighbor if he has a
| problem. If the fix is cheep, i.e. free mod from manufacture, or a
| $5.00 filter, pay for it. If it is something more, say $40.00, offer to
| split the cost. Try to work a schedule. If he is really into sports,
| don't get on the air during Monday night football or something else.
|
| If your station is clean and he won't cooperate, don't argue, but
| sternly tell him you are willing to work with him but to go read the
| literature on his equipment or on the back/bottom of it and let him know
| the FCC states that he and his equipment is responsible for the problem
| and federal jurisdictions take precedence over local courts. If it come
| down to this, let your local police and city counsel know your efforts
| to cooperate and resolve the problem so this doesn't become a "zoning"
| issue or police issue.
|
| Despite many amateur radio operators dislike of CB operators, contact a
| local club and see if they would be willing to help, you would be
| surprised most will without any problem.
|
| Good luck,
|
| Dennis WB3KUM/9

Saladshooter:

Now don't take this wrong, I'm not trolling!

The FCC says: If an Amateur radio (HAM) station is of good engineering
and compliant with the restrictions set forth by the FCC,
then telephone interfence is considered to be the fault of the
phone and the responsibility of the owner to correct.

Now! I know you are running a hot station, so you're not compliant.
BUT! you can do a number of things to improve the problem your neighbor
is experiencing. Filter's, chokes, re-orienting the location of your
tower, and operating at times least likely to affect him are about all
you can do.

However! If he chooses to get nasty and sends soemone to investigate
your station (not likely, but possible), you could end up in trouble.

I would try to make peace with the guy and help him solve his problems.
Being on talking terms will probably help you more than not!

All of the suggestions so far were good!

Arthur H. Wertz wrote
>Sure hope most families don't read these emails
>[Aaron and Kim using vulgar slang terms in Usenet posts]

I think most would agree that Usenet is *not* a place for families.
Vulgarity, profanity, threats, and name calling have been the norm here
for some time. Many ISPs require a special warning/authorization
screen just to get here.

On the other hand, Ham Radio has been touted as a family hobby for decades.
And for most of those decades, with a few exceptions, it has been true.
But I think many hams will agree with me that in recent years, things
have been changing for the worse. Call me a prude if you want, but I
think it's an unfortunate change...

Let's hope that future ham licensing applications won't require a warning
and parents authorization disclosure statement...

You used the radios WITHOUT the antennas? Do you like wasting money? If you do that long enough you'll burn them out. I have a Radio Shack TRC-221 with a center loaded 5' telescopic antenna. The power output is three watts on high (to save batteries,) and I can get out a good 3 to 4 miles on a clear night. Buy a good telescopic antenna for it. RS sells them as does www.Bills2Way.com

Last line says it, if you aren't staying within the legal limit for
power output then you don't have a leg to stand on if the FCC gets
involved.

Just thought I would add a couple things to the discussion--
some linears have fairly good preamps in them and
will help in the receive department.

As to worth, I live in an apartment and the likelyhood
of me causing way to much RFI-TVI definitely puts
any kind of amplifier in the not worthit category for me
anyway. I am probably going to have to move inorder
to put up a decent antenna and then I may reconsider
running an amp.

I did, with this result:

Radio Operator/Communications Analyst in Quantico, Virginia
USA

Key Role
Provide Morse code and radio operator support for key
government clients.

Qualifications
HS diploma
3-5 years of experience
Experience with voice, FSK, and packet communications
Experience with Morse code at a proficiency of 18-20
groups per minute or Extra Class FCC ARL
Experience with radio theory, Q signs, and radio
equipment

E-mail your resume directly to Mike.

I'd bet they have trouble finding a young ham to take this
job.

I wouldn't worry about the exams getting tougher.... the new exams will basically be a compilation of the old exams. The new Codeless Tech exam should be slightly easier, in fact, and won't contain questions irrelevant to the VHF/UHF spectrum the license privileges convey... only 35 questions as compared to the now 55-60 (between the Novice & Tech writtens required). The General will be about the same as it was... The Extra will probably be a bit tougher, but since no more 20 word per minute Code, far easier overall.

First off, please excuse the time lag...I've been out of town a few days. It hasn't been for lack of interest. I appreciate all help, and with your suggestions, have continued to try the different tests as apprised.

Thanks, Dave, for hanging in there with your patience and knowledge. I plan on trying these newest suggestions over the weekend. I'll try to answer your questions on this problem more thoroughly with the following:

It's difficult to describe the hum. I'm not sure, in my ignorance, if I could identify this as a 60 Hz hum but if I had to choose, I would say "yes". It's not a pure tone (as if someone were "humming" a constant note), and is, to my ear, more of a "buzz", or a cross between a pure-tone-hum and a buzz. It is definitely NOT a squeal. The hum does not completely drown out the voice, but is a significant part of what is heard. When I've tried to communicate, others can hear my voice, but with difficulty, due to the noise of the hum/buzz.

I have felt all along that this was an audio/ground problem, but haven't had the luck or expertise to locate the sucker yet. Will try these ideas and see if something turns up.

Thanks,
Nolan

Look here fuckball, I was running davemades before you were old enough to buy cigarettes, dont tell me about amplifiers, I have blown more 2879's then you have ever seen. As far as the alternators go its the same deal as the davemades, I have leece's in the garage floor because they do not perform like the ones I use now, The ones I use now have larger stator wire, larger rotor wire and a hell of a lot more diodes, My big alternators have 1200 amps worth of diode in them. Plus they will charge at a lower RPM.
It is apparent that you only know what you have been told, not what you have tried, I have tried them both and have made my decision, you can say painting a piece of shit will make it look good, call it what you will, I have also seen your piece of shit, and man is it. It is very obvious that you are good at two things, #1 You are real good at Talking about what you know. (you still haven't proved it)
#2 You are also very good at making sure the guys at Dave have a good clean set of balls. (this you have proven time and time again)
You don't hear me ragging Dave's amps, If it wasn't for them the keydowns would be boring. What I would do if I were you is this. I would walk the walk before I talk the talk. I have laughed at you and dealt with you on this news group for a little while and it has been fun,the whole davemadesux@ deal was
meant to see how long it would take for you to put on your ("hey guys, can I get a better price on that amp kneepads") well it is apparent that your tonsil needed tickling. you are a mudduck. good day

2139. Dumb Question II

Newsgroup: rec.radio.cb
Date: 2000-01-14 00:00:00 UTC
From: Ken <klajr@worldnet.att.net>
Message-ID: <387F8389.1149E4C0@worldnet.att.net>
Source record: 19988

a) Does the coax length practice of (divisible by 3) make a lot of difference in overall performance. I had to run 50' through attic, should I trim it to 48' (3x16) or not worry about it?

b) Do electrical and phone lines in attic cause interference on the radio end via the coax? Its not laying across them but within 4' from in some areas.

Thanks'
Ken

1st) Tell my what you built and what is does better then the amps on the market.

2nd) My AC alternators don't have DIODES in them.

3rd) I also was running Dave Mades longer then 4 years or should I say before I was old enough to buy cigarettes.

4th) You right I listen to what the experts tell me and you know what? If you blow so many 2879s as you said you did, maybe you should listen to them as well.

5th) Your web site look and performs like shit. You know that as well as I do. I know allot of people out here don't like me and will take your side.

6th) Most people don't like me because I speak the truth and I always tell the truth. Even when I lie I tell the truth (EVER SEE THAT MOVIE?) All I have in this world is my BALL and my WORD an I will never break them for anyone.

7th) The rest of the people that don't like me are jealous of me.

Do you fit under 6 or 7? I bet it is both but you not man enough to admit it. You take your pretty red pleather truck back to the barn I'm done.

I'm thinking of buying a Cobra 29 ST LTD. It's just that I've heard many negative comments on this N.G. about them. Are they really this bad? What about a pre-soundtracker version of this radio? I believe I can still get one at a substantial savings. If the non-soundtracker radio is a good one, then it seems I would be better off getting that one. Your thoughts...

Still ... a New Guy

Ham Radio University - HRU2000
Babylon Town Hall Annex
Phelps Lane & Miller Ave
North Babylon, NY
Sunday January 23, 2000
9:00 AM - 2:00 PM

This is a special day of education for amateur radio. Many ham radio Clubs and organizations from the New York City-Long Island Section will have information booths. This is your opportunity to meet the local clubs and organizations and learn their activities, meetings and membership. There will be a free tune-up clinic, DXCC & WAS card checking, eye-ball qso room, a full VE session along fifteen technical forums with guest speakers from the NLI section.

Donation: $2.00. Spouses and children under 12 will be admitted free.

For more information via Internet: http://arrlhudson.org/nli/hru2000.htm

Contact: Phil Lewis N2MUN (631) 226-0698

2149. Re: Midland 75-810 and handheld CBs in general

Newsgroup: rec.radio.cb
Date: 2000-01-14 00:00:00 UTC
From: Tim Dunfee <tdunfee@zoomnet.net>
Message-ID: <s7v6bk2koj8127@corp.supernews.com>
Source record: 19998

Yes, without antenna but only for about 20 or 30 seconds. I came across the "Things every CB User Should Know" (published by one of the antenna companies I believe) earlier today and bonked myself on the head. I should have known better but it appears that no damage was done. I'll take your recommendation and stop by radio shack. I did look at bills2way earlier today but have a question. I know CBs are somewhere in the 27-29 MHz range but the descriptions I've been seeing for radio antennas mention the UHF and VHF bands. Does UHF or VHF include 27-29MHz?

>>You used the radios WITHOUT the antennas? Do you like wasting money?

Some one told me they could get a new S/K 16 pill for $1,000.00
I told him good luck with it.
I was asked why I said good luck with it.
I informed the person as I was informed that they are not very good amps.

There are plenty of other amps that my sources say are good amps not just
Dave Made. It just so happens that Real Deal, Foxie, Skull Kracka,
Dominator, and many more are not favorites.

I would rather you buy a No name or an X force.
It just so happens that those two boxes are more expensive the Dave Made. I
even hear besides the shitty boxes Train uses they build a good amp.
Does this mean I suck all there nuts too?

> 1st) Tell my what you built and what is does better then the amps on the
> market.

It doesn't matter what I build, Why would I want a boy that thinks he knows everything running my stuff. Its people like you that have people believing the kind of shit you believe. (word of mouth) I know that the Dave crew Knows their stuff, I Was talking to Dave Before (mike) Rock-N-Roll came around.

> 2nd) My AC alternators don't have DIODES in them.

Neither do mine, But you first need to learn to run DC before you Dream about AC.

> 3rd) I also was running Dave Mades longer then 4 years or should I say
> before I was old enough to buy cigarettes.

Still Wet behind the ears.

> 4th) You right I listen to what the experts tell me and you know what?

As I said before Why would I want to share that info with you.
There is not an amplifier question YOU can ask me that I cannot answer.

>If
> you blow so many 2879s as you said you did, maybe you should >listen to
them
> as well.

I Key Down, something you nothing about, I run well beyond the 19 volts you play with, Practice makes perfect. Run your key way on up there, turn the volts up a little, watch the watts increase and you to will fill a jar with pills.
Then one day you to will know the true limit, and I am not talking about keying no 100 watts per 2879.

> 5th) Your web site look and performs like shit. You know that as >well
as I
> do. I know allot of people out here don't like me and will take >your
side.

This has nothing to do with this matter, you don't like it because it does'nt show any Daves. I have some if you want some pics..It looks fine to me, considering I have been on the computer for less than a year. Its not there to be pretty, it is there to show people some "purty trucks frum Texas" What the hell do you have on your site that is worth looking at? I

can't believe you paid for a domain for that little bit of bullshit you got on your site.

> 6th) Most people don't like me because I speak the truth and I >always tell
> the truth. Even when I lie I tell the truth (EVER SEE THAT >MOVIE?) All I
> have in this world is my BALL and my WORD an I will never >break them for

I had a similar problem with a neighbor 3 houses down from mine. We shall call him Bill. All of the other people in the neighborhood experienced no problems with bleedover on their phones, TV's, stereos, etc. Ask the other neighbors surrounding you if they have ever experienced these problems. That will give you an indication as to what needs to be done.

My neighbor became nasty and did call the police. Fortunately for me, I was running 4 watts AM and 8 watts on SSB and they couldn't say anything about being over power. I also had a letter written up with the actions I took to try to alleviate the bleedover and took another neighbor as a witness and asked Bill to sign it. Naturally he refused just as he had to accept filters that I had provided. Both myself and the witness signed it making note of Bill's refusal.

That plus the interference packet from the FCC prevented anything from happening to me or my station when the police showed up at my doorstep. The thing to remember is C.Y.A. and stay within the legal limits. I talked across the country with only 8 watts on SSB. It can be done! I hope that your situation gets resolved without hardship and annimosity.

I will just get photos of all of the trophies, Why don't you ask one of your people you call experts. I bet I have more trophies than you have owned in pills, and no they are not all won in my backyard. I won the 2 pill and 4 pill class in Memphis 2 years ago, I was the only one to beat Crap Shooter in the 8 pill class and blew right at the end of the key there was only two other guys in the class of about 30 people, Mr. Gun and some other dude, I didn't have a spare 8 pill, Mr. Gun beat the other guy, There was a lot Dave Mades in that class. At the last hot springs break my tag team partner tied with BB 4 times in the finals, they finally picked a winner.(who was helping BB?). I blew 3, 2 pills before I decided I had a Bad coax going to my antennas. I have only lost to 2 Dave Mades in texas, Mr. Gun and Bam Bam from up north. 2 keys out of dozens, I have said this before, it is not the amplifier so much that wins a keydown as it is the antenna system and charging system amongst a lot of other factors. I will be in Jacksonville this year and possibly Augusta and if I am lucky maybe even Detroit, then you can talk shit if need be. I am friends with a lot of the guys in the KeyDown Circuit, I like it that way. we all have a good time at the breaks. I plan on keeping it that way.

Everything said so far is not bad at all, but try this: Since you have a non-standard radio, unplug it and put it on the shelf. Go to Wally World and buy a useable radio which you can plug in, leaving entirely stock. Make certain that the radio is well grounded to a point separate and apart from the house electrical system. Use a separate ground rod. Make certain that the coax is of good quality and the connectors are affixed properly. Check the swr for anything outlandish. With this, it is inconceivable that you would be getting into a 900 MHz phone. You need to demonstrate that you are operating legal equipment and power levels, and that you have taken reasonable actions to clean up your end of the problem.

I don't think the question pools are available for purchase.
On the other hand, our volunteer examiners probably have a bit of a
collection from all the exams they've run in the past.

I haven't heard of corruption in the VE process here, and we don't
have the medical exemption for Morse either.

Both the 1000 and the 500 (Little Will), will handle the frequencies you mentioned. I have an RCI-2950 (26.0-29.6 freq conversion) and it works fine on both antennas. Just tune the antenna for lowest SWR on channel 20 AM, and your ready to go.

Me an toll don't argue any longer!
Me and ICM ignore each other.
I am through with -=(BOO HOO)=-.
WHO IS NEXT???
Hopefully it will be some one with new material.
My youngness I am thankful for.
My parents house I am proud of.
My Dave Mades are duck stompers.
My knowledge is growing.
My experience is also growing.
So please try to come up with something original.

It's going to be a mobile radio, nothing else. How does it stand up to interference noise? I get ignition noise through my antenna, on any radio I use, and I can't get rid of it. It's not extremely bad, but enough that it's noticable. There is ABSOLUTELY no noise in the charging system.

I just bought a TS430S for $325,10,11,12,15,17,20,30,40,80,160
meters,100 watts AM,FM,SSB,CW,general coverage reciever,memories,scan.
Why would anyone pay $50 more for a 1 bander?

Yes, you can change some of the UFO's....

It was an option you had to purchase at the time, and a rare one at that.

Why would the suffix make a difference?

The suffix only serves to tell people what revision the tube is....

And all that <<usually>> states is whether the tube is a ruggedized version, UHF optimized or designed for heating....

And, lest I forget, the type of cooling... And plate multiplication (ie K is multiply times 10).

So, even if I wasn't giving any suffix, the smallest it could be is 10 kilowatts of plate dissipation power.

Holy Shit would be the correct term. The driver is a 4CX1000. You figure out what the pump is gonna be.

Dominator boxes suck.

Even his new "street sweeper" design.

Foxies don't usually win shit unless they have BB's antenna system giving
them the edge, once again proving that the antennas are the most important
thing.

Your showing your lack of knowledge...

Again.

I just acquired a Stoner Pro-10 and need a owners manual, service manual, or schematics. Basically anything you may have on a PRO-10 including ads or literature. I do not have to have the original, just a copy for my reference. The original would be nice if you have any to sell.

I will pay for copies or original manuals or information.

Please reply directly to blueglow@mindspring.com.

Thanks,
Mark

You got that one right , out in the Seattle area, there were a lot of
Stoners, in the SSB group that I was involved with about 12 years ago, one
of the group was probably the no. 1 radio fixing man in the northwest at
that time , his attitude of Stoners is that they were boatanchors, neat to
look at , great talking when they worked , I got rid of mine and went to a
142 way back then ,it didn't quit swing as much as the pro 40 but it had a
lot better ears and in all worked a whole lot better, I actually gave my pro
40 away , tired of sticking money into it,73's

RMS as far as CB goes, is a term sometimes used to describe what type of power is being measured. The RMS wattage of a transmitter describes the average power. Some may question the improper use of the term RMS in describing power, but it still conveys the message.
The other type of power is Peak power or PEP. It is the measurement of the average power on the peaks of the modulation envelope.
.

Some will tell you that the 102" stainless can't be beat, but it can.
At least marginally. These coiled antennas if they are not base
loaded, not to short, made of a more conductive material, and if they
are of a larger diameter that the 102, then they can beat it.
The one, two, three, of it doesn't matter. The squares stock or
round stock of it doesn't matter either. However if a ribbon coil was
used instead of a round stock coil then you may be able to show some
improvement.

I had a new President Lincoln a couple of years ago...and i can tell you
that it is one of the best radios in the world for SSB transmissions.
The microphone you have selected to add to the radio does in fact
require a 9 volt battery for its power source.

Source record: 20081

It would make more sense to move these data transmissions to 400 mhz instead of moving the 11 meter CB band into that range. Especially since there is already a CB band in the 462/ 467 mhz range, and the UHF frequency range would better support these data transmissions because of better carrier resolution.

Hi,

I have @ $700 dollars invested in almost 100 books purchased from the
TAB Book Club. Many of them are "cookbooks" and are great for the
electronic hobbyist. I am asking $50.00 for the lot and will deliver
anywhere nearby (northeast IL area). If you would like some titles you
may call me at
n9npp@n9npp.com and I'll go over them with you. I really hate to get
rid
of these but I need to make room for my new hobby. I also have an almost

complete set of SAMS Photofacts CB Radio Series Books. I will throw them

in for $25.00 more. All books are in great condition.

i still have for sale 2 big radios
ft990
ft736r

> look at , great talking when they worked,

I'm surprised to hear anyone say anything bad about a Stoner. I
had several and not one of them gave me a bit of trouble. I take
that back. I had to clean those interconnect pins on occasion.
I've worked on many a Stoner and overall I think they had a
better rcvr than all of the Cobras' and Presidents as well as the
remainder of the makes I didn't mention.
I found them to have a quieter rcvr and good fidelity. I would
even say as good as most any Ham radio at the time.
I realize that any radio can have trouble but these seemed to
have a long MTBF. I only had to work on the ones that were hosed up
by the unknowing or just tweaked them to get back to normal specs.

If it is a Saturn Turbo, it is worth the price. You got to realize it is used and most people dont want to pay that price for a used piece of equipment no matter how nice or how good it is! I'll put it to you this way, They can scrounge up a couple 50's and apply it to your price towards a new one and get a warranty with it.

Since I didnt get the prior post for this. If you are selling accessories with it like, Silver Eagle or some thing else then it is a good price!

Here is the URL for a new Saturn price and the price is included in the post! In this case a couple 20's would get the warranty and shipping cost!

xxx
If your antenna has a characteristic impedance of 50 ohm in the
operating
range, Your coax (if 50 ohm) will be "flat" regardless of length. If
your antenna
is not at 50 ohm, you will have standing waves on the line no matter
what.
Trimming coax does not "cure" vswr.
xx

>
> b) Do electrical and phone lines in attic cause interference on the

xxx
Not generally but it is best to keep transceiver coax away from other
lines
to prevent any interference to any device.

There is a world of difference between 5 wpm and 13/20 wpm.

At 5 wpm you can still get away with thinking about each letter after it
is transmitted. By 13, and quite definitely by 20, you had better be well
integrated with the code, recognizing the "sound" of patterns, or you will
fail quite miserably.

xxxxx
Root Mean Squared value of a sine wave.
I believe it is .707 of E max.
It equates to the work a AC line will deliver when compared to DC.
Like a 117 VAC outlet actually has 312 volts peak to peak.
The line will do the wattage equivalent work of a 117 volt DC line.
You cant tweak or shine it up much.

Fortunately for me, I am using a bird watt meter and also have the slugs for a few different bands! Unfortunately, I couldnt completely test the modified 667v since the HF slug was only rated at 1000 watts. I also use a kenwood watt meter that does support 2000 watts and in all aspects up to 1000 watts corresponds with the bird meter! Also have a pdc600p meter that was tuned precisely to correspond with the bird and kenwood meter! And since I work at a commercial radio shop and own my own backyard repair shop, I suggest you check your meter for a defect and the other station check for bad finals or something blown in the linear! Since 2SC2879 rf finals are rated at 120 watts each and the driver is rated at 80 watts, your output should at least be 400 or more with a halfway descent drive of 2 to 2-1/2 watts! Also be sure to use the formula for current draw in amps and relate your findings to your output power and see if the output displayed on your meter come close to your calculations from current draw!

Lincolns are pretty good at noise rejection! However if you get noise
on other radios as well, you might get more or less on this one! You
might not get any at all! If you do, try changeing the location of
your ground wire. Good Luck!

Newsgroup: rec.radio.cb
Date: 2000-01-15 00:00:00 UTC
From: njmedman@aol.comnoemail
Message-ID: <20000114235215.02665.00000275@ng-cv1.aol.com>
Source record: 20011

It's funny that this discussion is still going on in this newsgroup but in the ham radio newsgroup, it's a dead issue.

The FCC changed things. Waaaaa. That's the way it is. Things change. Don't like it? Go to the source and try to get it changed back or sit down and shut up. :)

2200. Re: OK, so how many are going to get a ham ticket now?

: get a ham ticket now that the rules have changed? There is enough debate
: over what is good/bad about reducing the CW requirements and I am just
: wondering how many of the regulars in the group will be 'running out' to get
: a ticket after 4/15. I'm not talking about present Tech+ or Techs, just
: newcomers. There seems to be a lot of fear about the ham bands being
: overrun with 'CBers.' Lets see if that is justified...

I will be, for one. I have been able to pass the Extra test for probably
30 years - heck, I could even write it. But I have not been able to get
my code speed above about 10 wpm.

: And to further it, how many are planning to run out and buy a NEW HF radio
: ar accessories if you do get a ticket?

I already have decent Ham gear on my shelf. No need to purchase any more.

I'm not a lawyer, so my info may not be 100% correct, but I believe a decision was made in federal court regarding ham/CB antenna's that basically say that local zoning laws and neighborhood associations/condo associations and the like can not keep you from erecting an antenna... as far as if there's stipulations on the height, design, etc, I'd consult with a lawyer if you are that worried. That's why they get paid the big bucks! :)

Honestly, relax and back up a bit from things and try to acheive a detached
perspective.
This restructuring will do no more harm than the no-code tech. change did.

Things will go on largely unchanged after 4/15/2000. Don't panic.
About the only real change will be that Extra and General licenses won't
mean quite
as much as they used to. Dumb, lazy, or slothful people will still be kept
out by the
5 WPM requirements.

As far as I know, you keep credit for it for whatever the grace period is.
All you should have to do is pass the code - if you haven't already.

It is possible, after the new regulations go into effect, that all that
will need to be done is have the VEC send in the paperwork.

Hello Outsider,
>use a larger torid! the way you combine stages depends on the turns
>ratio you are using.your input would be combined the same as the output.
Yes, but I'd like to read up on any reference material you can suggest
regarding bandwidth, saturation etc.

I am no component level RF man so I'll be starting from scratch.
>> I know that a 1:4 and 4:1 input splitter, output combiner is used in
>> several of my 8-pills but I'd like to know if you can get all that wire
>> on one torroid or what?

Hello Toll,
>Depends on the box.
Yes, I'd gathered that much.
>The common "mass produced" (Texas Star, Messenger, etc.) use the common
>torroidal combiner system using a torroidal transformer.
So they used very similar or same output combiner in both original Messenger 16-pill and TS 16-pill? Both these were biased for class-B operation I believe.
>Some types of the battle box (DaveMade and Cookie's come to mind) use the
>more esoteric multiport combining method, whereas it is a true combiner.
All class-C.

Does the class of operation have any relevance to the output combining technique?

Sorry if this seems a stupid question?
>More info about the multiport can be had from Motorola jsut for the asking.
>I can dig the app note out if your interested.
Please. I long ago lost my own copy of the Motorola RF data manual as I never envisaged getting involved in design work. I still don't!

FYI, my requirements for this amp is that it should be orientated strictly towards SSB/CW operation. It's ability to operate, albeit with reduced power out, on AM is secondary.

As it will be driven primarily by stock ham transceiver output power (100w pep), I'm not going to be to concerned about any form of over drive protection what with this 100w driving strait into 16 x 2879's.

The most important factor is that it must operate over the full HF spectrum of 1.8-30Mhz. For several reasons I have concluded that Type 43 ferrite material input and output transformers are best suited for this.

Another amp builder, who is on this ng suggested that I may have good results by combining ferrite materials. I think he suggested Type 61 on the input and 43 on the output, or the other way round. I'm not sure this will benefit me. Comments?

Negative feedback to level the gain and induce stability. individual bias per pair of devices. Thermal protection and some kind of vswr fold-back. The latter I've got to read up on. I believe Ten Tec have perfected this in one of their amp designs.

Relay switched Chebychev filters in the output. I will look into some kind of frequency sensing so that as one slides up through the different ham bands the respective filter clicks in. I think several of the US made commercial amp's have this facility, Ten Tec Hercules, SGC.

Have any of you used the transformers from: www.rfpowersystems.com

Drop me a line with the application note info.

Thanks

Phil / UK

> to give time for the tests to be rewritten.

I said, AT THE PRESENT TIME, the FCC has not announced any change of the exams. They have said that they are going to rewrite them, but no announcement has been made as to when those new exams will be available or what they are going to contain (or anything else about potential new exams, other than there will eventually be new ones).

But, even though the FCC has never moved that fast before, I realise that new exams could be available within the time period in question, so I went further to clarify with, "even if new exams come out at that time, the exam you take now should still be valid even after the change."

However, thanks for your concern, Toll.

The FCC isn't rewriting the tests, Dwight...the VEC's are. In as much as they are not hamstrung (pardon the pun) as the FCC is getting this done, I am sure there will be new tests ready to go on 15 April 00.

I use this model in a truck and just need to know how to adjust my talkback speaker...I mean as soon as I plug in an external speaker and key the mike it just whistles and screams...so I try cutting back my mike gain but I have to turn it back so far to stop the whistle that I can not get out anymore. Anyway I really do not like this radio. It is a damn shame you pay $340.00 for a radio and the owners manual looks like a cheap photocopy and damn near every other word is misspelled. I will not be buying another one of these overpriced hunks of SHIT!

I bet you wont take your piece-of-shit to texas and find out about what money can really do! When you get enough time in at taco-bell to get a vacation and save up your pennys take your week-ass truck to texas boy and find out about real alts.and amps.
I know, you cant afford-it, you cant afford-it, get off the news group until you talk to dave and find out that there might-be?, as good or even better out there.

No Phil, your post is the joke.

K1MER made some very good points. Accept the decision and move on.
If you don't like it fine. Get into some other hobby. Otherwise, work
together with the rest of us to make amateur radio fun for everybody.

Could someone please post a link to alignments for this radio please.

Also any opinions and comments, I have just brought one second hand and I need to fix the meter light (easy?). I also want to turn the power up to about 4-5 watts from the current 2.5.

Are power mikes any good?.

Where can I buy accessories (prefer New Zealand), I need a mounting bracket and power cord.

Thanks for any help

international NZ07 or local TA07 26.550mhz

Christ does not need a radio, He is the true owner of
all the frequency spectrum and could overpower any
radio anywhere at any time with as much effort as it
takes for you to click your mouse. Jesus does not need
an antenna, wattmeter, linear, or anything else.
He knows that He rules!

In most cases, A 100 watt or slightly more is enough. It will help your output signal dramatically. As for transmitting further than you can hear is kinda of depending on if other stations participate in running amps or not! Some stations running 4 watts may here you but wont be able to reach you in return. However most base stations have better receive than transmit, so you might want to purchase your 125 watt linear, even though it is illegal to operate them on 11-meters (CB). Mobiles usually have weaker receive and transmit plus a little more noise on the receiving end and a 125 watt linear on your end will help punch through that noise!

They are inductors.

Q-You may ask what is an inductor?
A-An inductor is an element of electrical systems constructed of numerous turns of wire around a ferromagnetic or ari core.

Q-You may ask what does it do?
A-They oppose any change in current.

Q-What that ability to oppose any change in current call you may ask?
A-Self incuctance is the proper name often call inductance.

Q-How is this measures you may ask?
A-It is measured in Henries. Names after the American physicist Joseph Henry.

Q-You may ask how do you determine the inductance in Henries of a fixed inductor.
A-You will need to know a few things about the material and the folowing equation:
L = (# of turns squared * the permability of the core * the area of the core) / the mean lenght of the core in meters.

Now for the coolest part of inducatance!
Lenz's Law : A law stating that an induced effect is always such as to oppose the cause that produced it.

Find a scamatic of your rig and use this info and you may find what you are looking for.

Dwight Stewart wrote in message
> I said, AT THE PRESENT TIME, the FCC has not announced any change of
>the exams. They have said that they are going to rewrite them,.....

1st off.... the FCC doesn't rewrite the exams, the VECs do with input from the Question Pool Committee...

>but no announcement has been made as to when those new exams will be
>available or what they are going to contain (or anything else about potential
>new exams, other than there will eventually be new ones).

You'd better read the ENTIRE document from the FCC. The R&O explicitly states that NEW exams will be ready by April 15th... (not 'eventually'). It also pretty much says that those new exams will contain MOST of whats in the old exams (new Extra = combined old Advanced & Extra theory, new General = part of old Tech, Novice &General writtens, and new Tech = part of old Novice(minus HF related) & present Tech)

> But, even though the FCC has never moved that fast before, I realise
>that new exams could be available within the time period in question....

Not 'COULD'..... new exams WILL be in place on April 15th. The new Tech question pools are ALREADY finished. Work has already begun on the other pools. The new exams are not a total rewrite, just a reorganization, with a few different questions thrown in.

>I went further to clarify with, "even if new exams come out at that
>time, the exam you take now should still be valid even after the change."

New Exams will be out on April 15th...BET ON IT! ....and although the ACTUAL language of the R&O is just a little vague on credit for the old written exams (it doesn't actually spell that out... sect 3 paragraph 52), ALL of the VECs and ALL of the Ham mags have taken the position that credit WILL be given for writtens taken since April 15th 1999 in the case of Tech-pluses holding a General CSCC and Advanced class holding an Extra CSCC (Certificate of Successful Completion) Following this line of thought, a Novice, who takes all the written exams now and passes, could become an Extra come April 15th... but that conclusion is not spelled out in the R&O.

On the 148 they really aren't necessary. I'd stick with a good quality dynamic microphone. The one that comes with the unit is pretty good but I don't like the -feel- of it myself.

2270. Re: Mr coily antenna ?????

Newsgroup: rec.radio.cb
Date: 2000-01-15 00:00:00 UTC
From: MC 10kW Jesus <qsl27@hotmail.com>
Message-ID: <3880A824.2270C88F@hotmail.com>
Source record: 20119

The overall length of the antenna has the greatest bearing on the performance. I have a lot of antenna that I experiment with and the longer the better. The quarter-wave 102" whip is the best performer. But, I must confess the 48" continuously loaded fiberglass whips I have aren't that bad. Some antennas have better bandwidth than others though, but for regular 40 channel operation this isn't an issue.

Correct me if I'm wrong but doesn't an antenna cut shorter the a half wave act capacitive? I always figures that the coil (Inductor) was there to cancel out the capacitance.

RMS is a way of measuring an AC voltage. This waveform is typically volts. Often Watts are referred to as RMS in consumer hi-fi. I don't really know why as it is a bogus term. RMS is equal to 0.707 of the peak. So for instance if you had an AC voltage that measured from -10V to +10V it would be swinging across 20V. Take that 20, divide by two and then multiply by 0.707 and that will give you your RMS voltage. Why do we use RMS voltages? Well, it is the only value of an AC voltage that will work with any conventional electronics calculations. Like Ohms law.

Let's do a simple example:

You pump your CB into a 50 Ohm dummy load and tap an oscilloscope on and measure the RF volts. You key up the transmit and see a nice sine wave that measures 10V from trough to crest. Take the 10V and divide by 2 and then multiply by 0.707 and you get 3.535V. How many Watts is this radio transmitting? Well, Ohms law tells us that P=V2/R (power = voltage squared divided by resistance). We know that the load is 50 Ohms so 3.535x3.535 = 12.496/50 = 0.25W (okay, a pretty weak radio I admit)

If we were to take the AVERAGE of the signal and do the calculation we would get...

2.5x2.5/50= 0.125W WRONG

Or the peak to peak voltage

10x10/50=2W WRONG

When measuring a modulated AM waveform you CAN'T apply Ohms law - it is meaningless.

I hope somebody benefitted from this.

That's a different kind of "drag"!
A "Sonic Drag" is where a couple of
twits line their cars up side-by-side
at the local Sonic, then take them
out of gear and rev the motors to
see who can make the loudest noise,
which of course means he is the
better driver with the faster car.

I've got a used Cobra 148 GTL on the way and am wondering if it is a decent radio. I'm currently using a Uniden 510. Will the Cobra work better for me? How much are the SSB channels used? I've never had a SSB radio before and am wondering if anyone really uses it.

Any info on the 148 GTL is appreciated.

Thanks

Once again, Talking the talk, before walking the walk. You need to be more open. Try to imagine more in life. You are trying to take up for people that no one is ragging on. I am sure they love the attention, I would. I have got a friend here in my town that has keydown trophies from the 70's. I will not give his name but I will say this. He was the guy that beat CarpetBagger in Memphis a while back, He won the AC sky with a 48 pill box. He was the only guy at the keydown that was running more than one antenna on his mobile, The guys in Memphis thought he was cheating, They did not believe that a mobile beam was possible. They ran him and FBI out of town. I personally know he was not cheating, it was the antennas that won for them.

Flat coil antenna will perform better than round coils. Round coils have distributive capacitance that change the characteristics of the coil and it becomes lossy. The Purpose of the coil is to lower the impedence of the shaft above the feed point. Shortening of the antenna is secondary and may or may not be disirable. A properly designed coil antenna will out perform a 102" whip. There are very few properly designed coil antennas out there. These are the facts just the facts

Greetings all,

For Christmas this year I received a Cobra HH34
Handheld CB radio. 4 mile radius and 40 channels.

All it has done is sat in my car or here on the desk.
It produces wonderful white noise, but I realize that
I'm probably missing out. Might anyone have time to
help a _very_ clueless lady? Thank you so much.

Tracy

>antennas are mounted in the same location on a vehicle a coil will not
>outperform a full size antenna it may perfrom as welll as but will not
>outperform

First off the original poster stated this:

"Thinking of buying one these . Whats the diff of 1,2,or 3 coils what
gives. these flat coils project more signal toward horizon. Any real
world info from users ?"

Look at the last sentence. You'll see that he asked if anybody had
any real world experience. So i replied. Why did you?

It is obvious that if you had any real world experience with the
higher efficiency coil type antennas then you would know that a 102"
stainless can be beat.

Lastly, the ribbon type coil winding has less distributive capacitance
than a three dimensional winding. Therefore it automatically becomes
more efficient. It is not bullshit.

I got one of their catalogs once in the mail, and I think I got ripped
off. The one I got looked like it'd been made with 30 year old
technology and had typos all through it! Surely this was an impostor
Copper catalog.

This is a good point, many times the radio gets blamed for something
that is the fault of a poor or unfinished installation. I help many
people troubleshoot their installations at my company and I wish that
everyone would read FireStik's "Things Every CB'er Should Know".

This is a very informative booklet that covers just about every aspect
of a clean proper install. You can get a copy of the booklet for $3 S/H
or $1 if you have a FireStik Proof of Purchase. The information is also
free on their website.

http://www.firestik.com/Tech_Docs.htm

I am not affiliated with FireStik at all, just wanted to pass on the
info to newbies and longtime CB users alike.

No, John, 73 is really telegrapher code for 'same old shit'; listen to it sent by a decent op and string it out a bit and you will see what I mean. After sending charge-by-the-word messages all day, most of which ended 'best regards' to keep the fee down, the ops got tired of spelling it out and encoded it.

The telegraphy mumbo-jumbo is part of the heritage. Don't enshrine it for sure but one loses something by ignoring it. You have a W call sign because US ops, having N and A almost by default, simply added a dah to get W and K. The Brits, having G, made it dah-dah (M), dah-dah-dit (G), and dah-dah-di-dit (Z) which - along with V for some reason - serves most of the British Commonwealth and its ex-members.

Human beings doing human things. Don't ignore your own history.

Source record: 20164

Got a Boomer 600 amplifier with a problem
1. Works fine hooked to a dummy load
2. Goes into oscillation and tries to hang up when keyed into any antenna.
3. It burned out the finals
4. Replaced with new matched quad set.
5. still works fine into a Dummy load.
6. Still goes into oscillation and tries to hang up into any antenna.
7. I tried putting low pass filter on the output NO HELP.

Hope someone out there has seen this problem and knows a cure.
Thanks in advance for any help.

Tony

Hi

I got this radio yesterday from someone selling it with a linear for $150. He doesn't have the bracket so I am wondering how I can mount this somewhere in a Toyota Corolla, theres no room under the dash (hood release and glove box on other side) Any ideas?

Thank you!
Anna

From: cobra@budweiser.com
Message-ID: <3880f513.4483777@news.thegrid.net>
Source record: 20170

Check for cold solder around all IC's that mount to the chassis. 50%
of the new RCI-29XX series have major problems with cold solder joints
and could have this problem anywhere on the board! Just keep
searching! Another tip for keeping from happening again is to keep it
out of the car. When my RCI-2950 had the same problem as yours
exactly, I had found a total of 32 cold solder joints on my rig and
will never buy another one again. After fixing it, I used it for
another yr with no problem then sold it to someone.

Usually there is a local channel in your area that all the local
people gather on and talk(Usually between 1 and 23). Try to find a
active channel or you can try channels 17 or 19 and listen to the
truckers depending on the area of the country you are in! Also, If the
antenna is removeable on that radio, you might want to get a magnet
mount antenna for your car, this will increase the listening enjoyment
by far. The usual rubby duck aentenna has very poor receive and
transmit distance.

If it is an older 148gtl, Yes it is a very good radio. Capable of many extra addon frequencies and other mods. I currently use a 148gtl as my base station due to limited space in the house and have no complaints from others on the band. In fact, it doesnt sound any different than a bigtime base station. As for SSB, It all depends in your area. In my area, there is not alot except during the skip cycle where I can talk as far as I can hear (Georgia, Tenessee, Montana all from California). If you are in a major metropolitan city then maybe you will hear quite a bit on SSB. You will be very happy with the 148gtl. But like most CB'ers, We get tired of them and then see a radio like a galaxy and want that one too. Buy more. The CB'er with the most toys wins kind of thing.

You can get a bracket and knobs for it at any truckstop that sells radio
stuff , a 148 Cobra bracket should fit about 7 bucks abd the knobs , that's
hold down screws with knobs in case you were wondering , for about 4 bucks ,
same goes for a power cord, you got a good buy , 73's

Hey guys
I got a CDE Mark 17 CB Mobile radio that is new in the box that also comes with another box that has an extension cable for the mike.This unit is the one that goes under the seat or in the trunk.It has never been used,it has all the stuff with it.I have no idea what this may be worth.It is made by the Cornel Dubilier Co.
I want to sell to serious offer.You won't be disapointed.So make me a fair offer.

Gheez Johnny you would think you might
want to sit back and read a while before
you jump right into the fire. Kinda new
to this aren't you? A year and half with
you're license, and already preaching.
A wizard in Redding with a 667, knows
all hears all. PLEASEEEEEEEEE.... Spare
us with your Bullshit!!!!!! We are far more
seasoned than the Country bumpkins you are
used to dealing with in the not so great
white north California.
Go play tag with the Walmart drivers
out on 36, then we all will be happy >>>>>

I love these idiots that think you can
that much power out of a 667 without major
modifications.

And Peek-A-Boo is at most of them...

Keys at most of the ones he gets to attend, too.

I did my keydown thing 10 years ago. Sorry if it isn't up to <<prozac's>> standards. No, Prozac, you never heard of me winning a keydown.

I did have DC Sky a couple years at the Compton Golden Eagles under my belt, however, that break is gone.

For it's time, it was THE break to go to.

That was back in the day when white people didn't show their face at a keydown. My tag team pardner was guest of honor.

See... Some of us on this newsgroup have made a name for ourselves the old fashioned way. We built our amps, keyed against base stations and had a ball..... However, it was a long, hard climb to the keydowns of today.

So, next time you feel the need to whip out your credit card and tell everyone how bad you are, remember that their are those of us who sit back and laugh at the people today... Who think they are bad men because they can buy the technology that is their....

To quote myself and my old tag line:

"Remember... Technicians make it happen"...

What you buy today, we brought to life 10 or 15 years ago.

The 148 is 1 of the best CBs you can buy,SSB is used a lot on ch. 38
and I would not own a CB without it.Unfortunatly many used 148s have
been "improved".

2349. Re: CB Radio now dead?

Source record: 20198

I really doubt that! There are many operators out there that do not want higher frequencies. I do not for one. Even if I did, CB has many of my friends on it and I would not leave them. Besides, I have enjoyed CB for over 30 years and expect to continue enjoying it.

As for Hams, well there is the name isn't! They are a good group of fellows, don't get me wrong. Some of my friends are hams. Yet, the ham set has the same problems as the CB set. People there that do not belong on the radio. Sorry to say that, but you know as well as I do that there are individuals that abuse radio no matter what frequency is available.

During the daylight and early morning and evening hours you will hear a backdrop of horrible noise known as skip. This phenomenon is caused by solor flare activity which turn the upper atmosphere into a reflector of radio waves from lo-band VHF and lower, and allows one to hear dozens, and sometimes hundreds of transmissions at the same time. This most probably is the " white noise " you are hearing. Try out your radio at night...outside of your car, and you should be able to get out at least a mile or two, and hear all kinds of voice transmissions more clearly. I talked 11 miles on a Eagle Spitfire 454 10 meter handheld the other night on SSB.

You might try to mount it in the center console if you have the room!
It makes for a nice look and you dont see all the wires! I hate radio
shack, but they do sell a mounting kit for around $3.00 that comes
with several different mounts.

Yes it is a fairly common thing to get CW on a SSB rig by injecting a tone at the microphone input. This also makes for some very clean keying if you use a circuit that controls the attack and decay of the tone.

Boo the coils may very well be used to oppose any change in current but they
were used to cancel out the capacitance in short antennas long before the
KEY DOWN days. See ya bye.

>key the mike it just whistles and screams...so I try cutting back my
>mike gain but I have to turn it back so far to stop the whistle

>My galaxy has no problems at all, I can't tell you how to adjut the talkback
speaker, but I give you two other options that work for me:
1. Turn Echo off, killing talkback
2. Your Speaker is too close to the radio!! Back it away some and see what
happens<

Don't get a bad taste for all Galaxies because of that 73. You just so happened
to pick the only crap radio in the Galaxy line. 73's are VERY trouble prone.
The rest are usually very reliable.

FOR SALE, FT101EX YAESU, STILL HAS THE PLASTIC ON THE FACE. NO SCRATCHES OR DENTS, AND HAS A QUITE FAN, AND A SMOOTH VFO. WITH COPY OF MANUAL, NO MIC. D104'S WORK REALLY GREAT ON IT. FULL OUT PUT APPX 125 WATTS ON A DIAMOND SX-100 METER. 11 CRYSTALS INSTALLED. THIS RADIO HAS BEEN TAKEN CARE OF. IT LOOKS VERY GOOD AND IS VERY LOUD. USED MOSTLY ON SSB, BUT WILL DO WELL ON AM. I AM ASKING $275 AND YOU SHIP. THE REASON I AM SELLING IT,IS BECAUSE I AM WANTING SOME 2/440 AND SOME 6 METER GEAR. THANKS FOR READING.... 3'S

how many of you guys think that we will see a new breed of HF rig
appear soon ....one that will appeal to CBers that are going to
make the jump to low band rag chewing on 80,40 , 20 you know like
maybe a rig that will boast a 150 watts output instead of a hundread ,
a low cost built in atenna tuner ,so you can work 10 and 11 with same
antenna , good modulation pn AM instead of that lowl level modulation
crap. something you can turn up the ALC to get some audio ,,lots of
fancy lights big meters oh god those big chrome knobs.............i
bet yaseu will come up with a rig with all the features a cber will
want ....under 800.00 a new era rig is comming and watch
radio shack they ll make a hf rig to i bet.........easy mod to
11meters ....well lets get some input what kinda
features would yall like to see on new era Hf
rig.............BusDriver

Heh! Get out of here you turd burglar! I didnt ask for your silly
input! What brings you out here on this newsgroup?

And of all people, you should know that I only been in this shit hole
for only a year and a half! Oh, If you want to see what my old 667v
did, Go to RunningMans house and put your meter on it.
Silly little midnite high was pissed because he sold it to me and it
still walked all over him and his new 667v and Sigma 4 antenna 60 ft
in the air. Hehee! It only takes a little know how and a few friends
with good resources to make it exceed its specifications.

Oh, and thanks for your e-mail address. I been wanting to ask you
something and dont want it on the group postings. I'll e-mail you
later!

In case you dont remember talking to me in Sacramento, What lake was
that you were going to. Do you and Rambo still have booty sex in the
morning?

Hehee! Cya later ya silly fuck!

Hehee! I bet thats how you got yours in your truck, huh? Ya cheap
bastard. Just remember who the loudest and strongest signal came from
in Union City!!! And it wasnt Cobra Jet either or Silly Billy. I cant
believe I got that Silly Billy into radio. I built a monster out of
him.

Hahaa! I have to give you credit there! There wasnt anyone that could
get over that mobile in that city or Fremont!
You still run that setup?

Just to make sure there's no confusion about the meaning of my last
sentence, above, it was an attempt at facetious humor. I trust your
reply was in humor also.

Anyone is welcome to call me a whiner, if it makes them happy.
But first, et's make it clear who the "whiners" are.

I put forth the effort to attain certain priveledges and the FCC
taketh away and giveth to those who are unwilling to put forth the
effort. The FCC would not have done this on their own volition had
it not been for the "whiney" masses who wanted the priviledges and
didn't want to put forth the effort (Supported by equipment
manufacturers, with their own (Duhh!) agenda).

Back to Audio...... apologies for my rant.....................

Regards,
John, W4DRJ

I have seen these amps do this many times in the past, If all else fails, try putting a 5 watt 10ohm resistor between the driver section and the final output section, Make sure that the resistor is not wire wound. This is not a sure fix, the sure fix is too complicated to explain.

Yes I have had a couple CB that died on me, but I just fixed
them or replace them so I can stay on the 11 meter band the
rest of my like with out any saying I can't... that is and
will continue to be my only definition of of 'CB is dead'.
73's all,
John

>with a 1 to 4 spitter/combiner. I imagine other ratios would be pretty easy to
>come up with too. I used a 3db pad on the output of my radio while doing this
>to protect it from high SWR. The final setup was radio-pad- SWR meter-test
>circuit-dummyloads. You will see what is happening real fast and this is a good
>way to learn about combiners and splitters.
Yes, though I believe one very important thing about splitters/combiners
is having the leads of exactly equal length so as each pair of devices
are kept in phase.

I have Jerry Sevicks book but I wrote to him a while back suggesting
that one of his power ratings on a balun was kind of over rated.

I have a tapped balun at the feed point on one of my HF mobile antennas
and when I increased power past the 5-600w level the vswr started to
climb.

I replaced this balun with a tapped inductor and the vswr stayed stable.

Process of elimination said the ferrite core could not take the power.

He acknowledged this positively!

Anyhow, experimenting goes on.

I may bring an UN-completed 16-pill to the US later in the year for
Dennis or Toll to fine tune!

I wish my brain was 20 years younger.

Phil / UK

Although I think the mans Galaxy is overpriced your comparison doesn't
make much sense.The 29 doesn't even have SSB let alone a power supply so
there is a reason to spend more.
Also the 29 is WAY under $200,its under $100 maybe you made a typo.

coils and broadbanded,good luck!
I'm not sure what you mean by broadbanded but the CB band is less than
1/2 MHZ and easily covered by even a coil antenna.

2418. Re: Will this work?

What would be the best ideal wattage, input to drive a 350HDV?
I am referring to one of the newer styles, not the general 3-30mhz.
but one that had to be converted. If that makes any difference?

Chris

2428. Heathkit Signal Generator

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: Rick Sprader <rick1834@mailhost.det.ameritech.net>
Message-ID: <38824355.3FBEECCF@mailhost.det.ameritech.net>
Source record: 20277

Went to a swap today and bought a Heathkit Signal Generator 1G-72. As always happens to me at swaps, when I got it home it didn't work (doesn't work). Does anyone have a manual for this? I'd gladly pay for copying and shipping. Thanks.

RED wire is + positive 12v

Black is - minus or ground

green goes to mike jack Key radio line - disconnect the key line from the mike jack and put the green wire there

yellow wire is for the key radio line into the radio that you disconnected from the mike jack

white wire is the audio wire connected to the mike jack

orange wire(s) are a disable wired to a SPST switch.

>hello i need the wiring schematics for a workman 5 tone roger beep

Well, 3 people have come back and agreed with what I have said, Dwighty...

Of course, you can't reply to any of them... Because your wrong...
Again... As usual... Even a VEC has come and said that you where wrong.

Just like when you tried to tell people that it was impossible to shoot skip
on 11 meters outside the boundaries of the US.

Then, you told him in an email that YOU YOURSELF had done it.

Once again, Dwight the idiot from the NW Corner has things all fucked up,
doesn't read the entire post before he spews on, can't carry on a decent
discussion with anyone and will argue and fight until backed up into a
corner.

Sorry to have to (once again!!!) prove that your unnecessary, but if the
shoe fits....

Oh, Happy New Year, Dwight. I was kinda hoping that your resolution would
have been to stop inserting your foot into your mouth....

From your latest diatribe, I can see this wasn't / isn't the case!

haha

It will help harmonics if you use the compressor / processor to keep the audio below 100 percent.

If you use it to control overmodulation (like servo AM), you will increase overmod.

if you have it crammed between the seats make sure the heatsink in the back has some free room or you can over heat that radio and burn the finals. that also goes for any radio in the seat.

Good luck and best regards from Tim 082.

2462. amp design question

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: G SEVEN <superiorwavelength@prodigy.net>
Message-ID: <85snuc$aoto$1@newssvr03-int.news.prodigy.com>
Source record: 20311

I have a couple of questions regarding feeding the collectors current in a typical push pull class C design. If your so kind to help it is greatly appreciated.

Normally I tap into the rear (sounds kinda kinky) of the broad band transformer with a small wire, that will needle through a couple of # 64 ferrite beads. Standard method. Lately I have been tapping into the transformer at the same spot with no ferrite bead and larger gauge wire and have had no adverse effects. Noise,etc. Now my question is, does the ferrite on the broadband transformer act as a filter? since the current must pass through the ferrite tube to the collectors? Second, I would like to try feeding the collector strait with a heavy gauge wire but I can find a source for a larger I.D. ferrite bead. I don't want to go to Amidon and buy half a million of them either.

KRS

What can anyone tell me about this Box
I got it from a friend hwo said it was working fine
I would like to know what if any Mods can be done to it and what it will put out

a little info on it :
it has two switches on the bottom, both are to switch between 40, 20, and 15/10 meters
it says it is an F series Bi-Linear Amplifier
it has a remote switch box with a three way switch for off/AM/SSB and one for the Rcvr.

Will this be a good little helper to run behind a Ranger RCi2950?

Sorry for all the questions but I know nothing about this Box.

Thanks
-282- Dallas Tx.

Message-ID: <20000116122226.04495.00001052@ng-fc1.aol.com>
Source record: 20323

One of the easiest ways to do it is to build the phasing harness with coax connectors on the the ends of the 70 ohm connections and connect them together with a T. Then check the SWR at the T connection for each antenna. it should be about 2:1 or 3:1 at this point. Anything between these two numbers is pretty good as long as both antennas read about the same thing. Heck you will be doing pretty good as long as each antenna is in this range.

HomeBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $25.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM, intermittent VCO, comes out of lock easily, No time or interest for this project $30.00

Midland 79-290 Removeable face 40 channel SSB/AM mobile CB. A-F bands, Dual 2SC1969 final design $120.00

Palomar 225 Blue face amplifier in good condition, Set up class C $90.00

Penetrator 150 10-40 meter solid state mobile amplifier, with band switching and filtering, Class AB1 with removeable control head $200

Galaxy DX55 40 channel AM/FM/CW Export radio with extended coverage, Freq. counter, Connex Echo, 5 tone, Lots of swing at over 20 watts output $150.00 in great shape with original box.

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO

Hey Phil, long time no hear. A while back I was tinkering around with making a splitter to feed mutiple antennas, should apply to feeding multiple amps too.. I took a big BALUN kit and a hand full of 50 ohm resistors and began experimenting. I forget what the results were but it was pretty easy to come up with a 1 to 4 spitter/combiner. I imagine other ratios would be pretty easy to come up with too. I used a 3db pad on the output of my radio while doing this to protect it from high SWR. The final setup was radio-pad- SWR meter-test circuit-dummyloads. You will see what is happening real fast and this is a good way to learn about combiners and splitters.

2478. cobra 148GTL

Correction.............
...You're thinking of Dipoles here... center-fed antennas (essentially 2 quarter wave antennas, one tied to shield of coax, one to center conductor). A quarter wave antenna in ideal conditions represents close to a 50 ohm load, non-reactive (usually greater than 35 ohms), when resonant and needs no inductive loading (coil). The "other" half of the 'dipole' created by a quarter wave is your car's body, or if ground mounted, the earth.

CB radio dead, you must be joking. Here in the united kingdom it died
ten years ago. A combination of muppets and DJs on the channels, stupid
restrictions (some which have now been lifted) and over priced rigs and
antennea. I mean would any American citizen have paid $160 for an
Astatic base mike FIFTEEN years ago well we did.
When I look at some of the equipment that you guys can pick up in the
States for next to nothing I turn green with envy.

I eagerly await your comments
Mickey

I am considering making an antenna with coax and some TV wire and putting it under the molding around the front window of my vehicle (my wife doesn't want any unsightly antennas). I am not really interested in long range reception or transmissions. Just local stuff w/in a mile or so. Will this work?
Any suggestions are appreciated.

Many thanks in advance,
Paul

HEY YOU TWO

When talking about "MEETING" people, please use the correct terminology..

Your talking about "meating" each other... Something usually only reserved
for people on Polk St. in San Francisco!

Lighten up.

Prozac is a full of shit, doesn't know nothing yet little kid when it comes
to CB.

2508. Re: Stoner Radio Equipment

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: Sasquatch <Sasquatch-Trucking@worldnet.att.net>
Message-ID: <85tqdscln1@bgtnsc03.worldnet.att.net>
Source record: 20357
Cross-posted to: rec.audio.tubes,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.cb,rec.radio.swap

First off you conceited stiff assed hambo pricks , I thought it was totally rude but typical of the I'm fucking better mentality, to attempt to ridicule me , for at first attempting a common courtesy of saying 73's as I sign off , no. 2 also the attempt of slandering the way I described the receive , ears , every ham that I am aquatinted with uses that term , then the ten four good buddy bullshit , you see you make yourselves feel better that way, Now that your precious code is but a thing of the past, its to bad you cant take a clue and figure out that your holier than though attitude has had more to do with getting the code dropped and the overall disinterest in amateur radio!!! Amateur Radio is a good thing.it is and has been a source of enjoyment for me for years,both listening,starting as a boyscout,or to when I got my ticket in 87, yes I know , the worlds longest running Novice,my own fault , with my schedule, and the fact that I have a number of other hobbies,and a business to run it hasn't been a priority as an American citizen , your type is no better than myself or anybody else! Am I a bad guy because I had the balls and adversity to join no code, or to say things as I choose , or is it that I told the truth about Stoner Radio's, yup if I had paid 600 bucks for a new one way back the I wouldn't want to tell anyone I'd gotten screwed either . The truth of the matter is that the average Cobra or Uniden works better overall with less problems !But them Stoners are neat to look at and are a trophy to posses.As to what freq. that I run , well in my truck its good old channel 19,on my base its usually 33lsb or 36lsb, depending on what net I check into, when I do bother to turn the other radio on its 28,300 to 28.500, as far as wanting to be an extra no thank you , not that much interest in it , especially with the caliber of assholes that I've ran into ,you see gentlemen , it doesn't matter to you folks how many times one might try and provide help during emergency times , weather ,storms etc.,or how many times you fire up your own 4x4 to rescue someone stranded in the mountains around here,or hours you put in on an emergency radio watch , your still less than than human and sort of a piece of shit in most of your advanced and extra eyes!!! As to how this thread has went so long or gets posted in other groups , it wasn't me,all I did was attempt to give my 2 cents worth on Stoner radio's , after having been a once proud owner of one of them .The only up-grade that I have any interest in getting in the ham world is 2 meter , although I do admit it has been entertaining listening to the Nazi's and KKK, on 80 meters , along with the preachers , yep that's right they all have the right to be there too . What I will say ,and in the Seattle area there already is a movement starting is that we need more people on the bands , we all need to loose our attitudes , self included, and look upon this as a new beginning , to take radio into the new millennium, I mean can you just imagine what forms of technology will come about in the next 100 years or so ? with that its time to close this , oh yes you all may continue your crass little comments , or whatever

but don't expect a reply,
and once again 73's to all if you
don't like that then , FYS, you figure it out ,

No kidding.

I just picked up a 4CX5000A for 200 bux...

That ought to make a nice standby amp.. 100 watts in, 10,000 pep out!

Kenwood will drive that nicely, I suppose.

> Is Phoenix the nearest International Airport?

No, I would say that Little Rock is about the closest... Or Dallas / Fort Worth (DFW).

I don't know any of the heavy hitters well enough in the Little Rock area, so I would say that Peekaboo's offer is well taken... And, I will say that him and the rest of his gang are a good bunch of people.

I might be meeting up with them on the way to have someone to travel with..... Depending on how I get my vacation time this year.

Sorry for taking so long to reply..... Half the time I don't have the time to get this far down the newsgroup.

>
> Approximately how far from the airport?

It takes me about 6 to 7 hours to get their from here, doing a little over the speed-limit.

>
> I'd really like to bring a few guys out from the UK but they all run

Well, you would be able to show them a quarter of a million watts (combined) keying down when Ghostrider and Bluegill go to town...

And I don't know what Sludgehammer has!

Toll free IS such the man! And none of you explained & answered the man';s questions. This is want "Key downs" or "shoot outs" are, in my understanding:

They get some bros. & honkeys lined up in a line @ a park or somewhere at one end of the parking lot, and 1 receiver at the other end. They all "key down" to make the most amount of noise & blood over to see who WILL BE HEARD BY THE RECEIVER @ the other end of the splattered parking lot. This is the opposite of what Hambo's do. They do it in a field, and call it "field day." They use the lowest power to talk around the world then, or actually it's under emergency Y2K conditions that they do this. You see, Hambo's have had Y2K for years. And when it didn't happen, they did not get yelled at, like the false profits did! But getting back to my story, the bro. or honkey that get through all the heterodyne & QRM wins the key down or the shoot out! These guys ARE the BIG power boys of the CB ! Dey IS da BIG power Bros. of da 27 MC world. Now if I am wrong, please correct me! Dave!!!!!

I see that, as usual, amateur radio operators are doing a wonderful job at cannabalizing their own. Sasquatch, while you are obviously angry above (and probably rightly so--having dealt with some of these nitwits in the rrap NG myself) I agree with the meat of your message. Don't worry, these guys will be so full of hate and contempt it will take them forever to catch up with technology or what ham radio/CB radio is all about...

Make certain that the radio is well grounded to a point separate and apart from the house electrical system. Use a separate ground rod.

>>>What you have told him to do, while I agree with it, will put him in violation of NEC, and can enable the insurance companies to deny a claim in the case of an electrical fire.

It will not be a legal "little helper to run behind a Ranger RCi2950."
In fact, your Ranger RCi2950 is not legal to run on the CB bands. I'm
not judging...I am just informing in case you don't know. You have just
sat here on the internet and posted a message that can be read by anyone
who may be with the FCC. The FCC, Riley Hollingsworth, namely, has
increased its enforcement of rules. You'd do well to heed the caution.

Dave or Debby,
Is there much difference in the Cobra 29 and the Uniden PC-78? Is there
places that i could buy one amped up a bit? Right now i am looking at a Cobra
29LTD putting out 25 Watts for $140. Are there any places that can beat that
price?

Andy sit on the sideline if you don't understand the question being asked.

He is talking talking about getting V+ to the transistor, this is usually done with a wire with a few turns around a ferrite bead from your hotstrip(the point where your power is) to the back of the transformer, The ferrite bead is there to shield rf , you can try different locations they usually don't yield much differance.

2528. Why does everyone think cber will go ham

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: Deputy Dawg <deputy@aol.com>
Message-ID: <ERwg4.19$Sw2.1716@news3.voicenet.com>
Source record: 20377

Why does everyone think all cbers will be hams now ?

It is 5wpm to get a license now. That will not change. So To be able to talk on the HF bands like 15/20/40/80/160 you will still need to pass the 5 wpm, and the Tech Theory and the general theory. Pretty much the same as it is now. What is stopping them now from getting a license the Code?

Like I said...hope to wk you someday... I am also sorry that amateur radio operators have made so many defensive...I loathe the high and mighty attitudes that cause ham radio to get such a bad name...just as I loathe the CB operators who cause CB to get such a bad name...

You are right--we are all into the same stuff here, and those who keep it honest are the ones who usually end up doing the defending, eh?

2534. Need schematic for Messenger amp M4 (M650)

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: don@webheat.com
Message-ID: <388207D0.9B0F337D@webheat.com>
Source record: 20383

Anyone have a schematic for a messenger M4 (M650)? I picked one up and
it looks like it's missing a part.

Any help??

Thanks..Don.

2535. Re: Midland 75-810 and handheld CBs in general

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: Bendthelite@webtv.net
Message-ID: <28473-3882A2E7-1@storefull-114.iap.bryant.webtv.net>
Source record: 20384

By the book...27mhz thru 29mhz would be in the HF band. But, alot of people consider 11 meters to be included in the VHF Lo-Band.

As far as your options on the antennas for your handhelds...i think your best bet if long range is your number one priority would be a 4 foot or longer telescopic antenna with a center loaded coil. I have a Radio Shack TRC 236 handheld with this type of antenna, and i have talked over 8 miles with it running 2.5 watts on battery power. I have talked 15 miles on a Cobra HH45WX handheld connected to an A99 Antron base station antenna running 4 watts swinging to 9. This same radio on the 8 inch rubber duck antenna that came with the unit will cover 3 miles on the low power setting of 1 watt if received by a base staion antenna, or about a mile or so in good conditions to another walky talky with the same type of 8 inch antenna.

The point to this rant...is that the antenna is not everything, it is for the most part the only thing!! So...if your radios are working even halfway right, you can get the range you need by getting a couple of these center loaded telescopic antenns from Radio Shack. They are in the new catalog and cost $24.95. They are cumbersome...and people will laugh and small children will point at you and ask you why you have a talking brick tied to your fishing pole!!! But you will get #&%@# out. Hope this helps...So Long

2536. Cheap Deal on CB Books

Newsgroup: rec.radio.cb
Date: 2000-01-16 00:00:00 UTC
From: lou@cbcintl.com
Message-ID: <idb58s0s7qvgpl3rgaab5orrcfqohl7lcu@4ax.com>
Source record: 20385

We're selling our 3 most popular CB books as a special combo on EBAY. Here's your chance to save up to HALF the $80 list price. The books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios by Lou Franklin. List $22. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK by Lou Franklin. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS by Lou Franklin. List $38. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

You can see exactly what these books look like, plus all the specific, chapter-by-chapter details at our Web site:
www.cbcintl.com

Or go directly to the EBAY sale location at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=239682928

2540. Re: Mr coily antenna ?????

Newsgroup: rec.radio.cb
Date: 2000-01-17 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <3882715f.14631388@news.iserv.net>
Source record: 20389

Greetings!

It's a Rigid antenna, goes with a whip.

Needs a quad-mag mount or a *VERY* heavy duty ball mount.

Use a Backing plate on the sheet metal it's mounted to for
reinforcement to hold it in place.

Performance? Quite good. It's a heavy antenna, and has considerable
wind drag from the way it's designed. Which is why you need a GOOD
mount for it so it doesn't blow off.

My experience with the antenna? None for on-hand experience, except
for direct receiving end comparison reports from approximately 3
miles, open and flat terrain - and was compared to a 5-foot Firestik
II and 102" whip. With both vehicles, mine and theirs, using the roof.

Overall results? Adaquate. A bit better than the 5-foot Firestik
[using squelch on my radio with Firestik for original comparison], at
least was able to break open squelch level.

Between it and the 102" - too close to call.

If you want something, to say the least - unique, for your vehicle,
I'd say go for it. ;-)

A bit pricey, but similar performance to a 102" - it's your money.

Greetings!

If you're referring to Audio Systems in the Sonic Drags, then yes.

The strongest signal wins.

And you don't need to use Earplugs. But, you might want to bring along a pair, when the engines used to develop the power in the generator/Alternator setups, start screaming...;-)

Greetings!

Three things, two of these are used for Audio and Power tuning -
closest to the Final.

The third is for 50-54MHz [2-nd Harmonic filter] filter - it's the one
closes to the antenna connector.

A lot of times, people adjust the first two to get a little more
carrier and audio power ratio, with more audio than power - to help
the radio "sound" better - a little less carrier with a little more
audio.

The 2nd harmonic filter, if it's been played with, usually signifies
that either someone needed to re-tune the trap for one of two things,
more power, or re-tune to lower TVI/RFI [Interference] with neighbors.

"Stock" or Factory set radios usually have all the coils in place and
not played with. Since you've bought this one off the "net" at an
auction, you'll find radios adjusted like this to suit the former
owner.

Source record: 20396

Greetings!

The best advice I can give you is to listen to the conversations. To know what a "Bear" or "Smokey" is, think about Law Enforcement and speeding tickets...

"18-wheeler" - refers to a Semi - someone else has already counted all the wheels on the vehicle and has answered the question...

"Roger" [Just who is Roger anyways?] just simply means "I hope you understand what I'm talking about" - asked with an inflection or as a question, usually just is asking if you know what they're talking about or referring to.

The most important, just talk normally as if you were in a large cafe with all kinds of people around you. Act accordingly, you may be a stranger, but those with an open mind would be more than happy to show you the ropes.

As you travel into the different regions of America [Welcome - BTW] you'll find different "dialects" that are as diverse as those found in your own country.

Yes, we still butcher the Kings English, but bear with us...;-)

Greetings!

Well, I'm sure you've had the owners manual to the radio open at least a couple of times.

The "White noise" you're experiencing is due to an event called skip. It's a propagation event, that occurs when solar activity [sunspot count] is high. It's a periodic cycle that the sun goes thru and has a duration [maxima and minima] of about 11 years.

Unfortunately, your timing into trying out this hobby may not be the best. We are currently into a rise in the solar activity cycle that can make it, using a small radio like the one you have, difficult.

Skip occurs mostly during the daylight hours. It dissapates after the sun goes down.

Since you have a Hand Held, or WT or HH [as they're sometimes called] you do have a problem with getting the best performance out of it.

It may, or may not be worth holding onto this little radio - unless you have others that also have a CB and are able to hear your radio with the antenna you have now.

If you're more interested into this hobby, then Welcome. You have joined the ranks of others that share an interest like yours.

With the above said, you may need to upgrade the antenna, or get a better antenna for use with your vehicle or some type of home indoor/outdoor CB antenna to improve the reception of that radio so you can at least hear and talk to others around you.

I'm not trying to woosh over your head, it's trying to break this all down is not easy.

I do have a page or two to help people get to know what CB is all about...the URL is in my signature at the bottom of this message.

While Dancing with the Mouse on Sat, 15 Jan 2000 21:29:30 GMT, the Modem interrupted with an MNI from ""web-wolf" <tymbraREMOVE@home.com>", and the MotherBoard buffered this to Video RAM:

Greetings!

Well, the ferrite core itself is tuned to the windings needed to get
the output of the collectors - adding a wire with ferrite beads to
offer shielding/rf-retention, may have more adverse effects than
simply using the technique you're using now.

If it's stable, run with it. But remember that adding onto the
windings will change the impedance.

I was using a network analyzer I had borrowed and when I did my checks I did not see any real difference in phase from winding to winding but this may be due to my building practices. Everything was kept fairly semetrical. Normal constuction practices should keep the lengths within a few fractions of an inch anyway.

BTW Came by a novel way of tower mounting an amp.Novel for me anyway. I had a cooling problem when I tried to mount the amp in a box on the tower leg so I removed the heatsink and replaced it with an Aluminum plate. Coated the plate with heatsink compound and fastened it to the inside of the aluminum box then mounted the heatsink on the outside of the box. Works like a champ so far. I guess I will have to wait 'till summer to find out if it can really handle the heat.

I have a Penetrater HB-140 , ... had it since 1978 , very low power unit . The hb-140 is at its best 50 watts ! Thats it . Yours is probably just a little bit more . No mods that I'm aware of , the switches on the bottom are self explanitory ....10/15 meter would cover 11 meters (cb) but you already know that it's a no no to use on cb , so I'll end that right now , before some ham flames me . The other switches are also self explanitiory , am/ssb (duh) rcvr (duh) . As far as the 2950 goes , you should have went the extra distance and purchased the 2970 with the built in amp .

Using a magmount may be as bad as drilling a hole or worse. If you get ANY dirt underneath the magnet it will ruin the paint.
Talk with your dealer. I always thought that drilling a hole would depreciate the value of a car, found out it doesn't if its done neatly. Maybe the same is true of a lease.
Does it have the spare tire on the rear hatch? If so I have seen a lot of antennas mounted on the tire mount.

One of the better radios on the market. The audio is super loud, about 50
watts peak, turbo echo in it, and for all that enjoy talk back, its variable.
This is the newer designed board that has been out for a while now.

Actually, Radio Shack didn't create the FRS, they revived something
that has existed since 1947. In the old days, the FRS was called
"Class A Citizen's Band". It had kind of gone into a state of non-use
because darn near no one knew it even existed. Have to give Tandy and,
to a lesser extent, Motorola, for reviving it.

In case it is just the idea of an "unsightly" CB antenna. They DO sell antenna's that look like cellular phone antennas. Maybe then both of you will win. You get your antenna and she can give the appearance that she has a phone in her car.

paul and jacki wrote in message <38821FD5.58D7@gwis.com>...
|I am considering making an antenna with coax and some TV wire and
|putting it under the molding around the front window of my vehicle (my

You have several options. You can either run it direct to the battery (recommended) in which case you connect the red lead to the positive terminal and the black lead to the negative terminal or to ground. Alternatively you can connect to the fusebox, again red to positive and black to ground or the negative terminal. Doing it this way you can set it up so that you need to have the ignition on (stops the battery being flattened if you accidently leave the radio on), or you can set it up so that you connect to the power before it gets to the fuse box. Your choice.

Matt

Source record: 20434

Here is my two cents worth.

You will need an external antenna source to plug in the radio. It is not designed to be used inside. So, to make it usable inside plug it into an antenna other than the one that came with it.

It will work fine for a stock radio. If you like it then use it. If your not happy after the external antenna(tuned to the vehicle if you go that route) then move on into a bigger mobile or base station. The hand held CB's aren't really designed for anything except listening and using in the woods with your friends.

Good luck

I would try to find a local CB shop that has them. They are shipped in an oversize container. That will add up for just one. I only order them in when I order my base antenna's in. That way I can distribute the shipping cost out over more merchandise.

Good luck hunting.

I would suggest hooking it up to your battery directly since we dont
know the size of the linear. If the linear is real big you could risk
blowing fuses and if you replace with a heavier fuse you can cause an
electrical fire!

The G73 is inherantly the loudest talk back radio of the line. Now this won't show up unless you have it tuned up. Once it is tuned there is and can be problems.

1. You don't want TR32 removed!
2. Get a good Noise canx Mic
3. Get a good Speaker. Older speakers can cause problems. Cheap speaker (cheaply made) can cause more problems.
4. It is imperative that the SWR be in good order and now corrosion is showing up on the ground side. Make sure that the mount is clean if it is aluminum. (RF Grounds and Physical grounds are two different things and sometimes can fool you. Especially when you are sitting still)

Once you have determined that all is in order, then go to Galaxy's web site. They have some fixes and might address the problem with the 73's.

These are fun radio's. Neat features. But those who don't like it after using it, are usually judging the radio before they check out the other area's. I find more likely than not that the antenna system is causing a lot of problems.

Keep in mind that if the radio is properly tuned that you may turn your Mic gain down almost to 9 o-clock without affecting (boy my spelling) the Out put swing. It will just quiet down the mic and settle your talkback down some.

Hope that helps. These are practical solutions that I have found in the field of experience in working out these problems.

Here is another one you might try. If all the above is good. Take your excess speaker wire. Roll most of it up into a ball. Wire tie it or wrap it up in its self. Tuck this nice little ball up between your antenna lead and power plug. Thus creating an RF choke. This is a little secret that helps out 8 out of 10 people who experience feedback problems in most radio's that don't have other factors impeding their performance.

I do this for a living. Up to this point I have been successful 9 out of 10 times on this one. But the 73's can be very aggravating.
Good luck
God Bless

I am wanting to get my technician license and am looking for study material. I was wondering if any new tech's out there had any material they were wiling to share. Thanks for any help you could provide I am new to amateur radio and do not know alot about the subject. I downloaded the tech question pool but did not understand all the electronics questions. Plus, someone told me that these probably wont be the same questions anyway. Please Help!!

I am wanting to get my amateur radio license. I have been getting mixed reports on weather after April 15 a person will be able to get a licesne without knowing morse code. It seems to me that I read you still could but the president of a local ham club said you would not. Does anyone out there know the answer to this question?

I am new to ham radio and am wanting to get a license. I downloaded the technician question pool from ARRl and have been studying it this weekend. I was hoping to take a test next weekend. (They are having a ham convention about 45 minutes away where they are giving tests).

Someone late yesterday said it tis a waste to study these questions because they may not be the same questions asked on the exam. I thought they had to be the same. Anyone out there have some insight? I think I can memorize the questions but truthfully do not understand much of them. Thankas for your help!

people still have to get off there asses and take the test, they could take
the 5 wpm test now before the rules change, what is stopping them,
Personally the one's who will benefit the most are the tech +'s who have had
a license all along and didint want to try or couldnt pass the 13 wpm. The
best dx is still on 10/11 meters any schmoe who thinks he will go out get a
rig and act the same as he does on CB is wrong, This is one way for the FCC
to control what has happened to CB, sort of putting all the bad eggs in one
ring it is easier to watch you that way. Now you will be accountable, your
name is stamped on a license making enforcement easier

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

Hello from Texas,

I'm looking for 1950s and 1960s vintage Raytheon CB
radios and Walkie Talkies for my budding collection.
I'd prefer sets that are cosmetically nice, as they
will be on display. Working condition is not as
important, but working sets are preferred. I could
also use owner's manuals and shop manuals.

Whatcha got?

73,
Dean / K5DH / k5dh@raytheon.com

You don't. The wiring is not heavy enough. Run a 8 or 10
gauge wire directly from the battery with a breaker near the
battery of the appropriate current rating. It you want it to
turn on with ignition / accessory use an appropriate rated
rated relay and run the primary of the ignition / accessory
at the fuse box. A relay draws about 1/2 to 1 amp.
Cheers, John

I have never said anything on this newsgroup that was negative or derogative towards you. Although you may have pissed some people off, I just laughed at most of your posts. But a couple of days ago you put my name into some of your shit (for no good reason). You got on this newsgroup and insinuated that someone else is me. That is fine! I could care less about that. But you took information from Concrete man about me and placed it on the board. That is a very careless act. Since you choose me to have a problem with, I think it appropriate to make sure that we meet and talk very soon. You should ask Dennis if I am the type of person to be played with on this newsgroup. I AM NOT! There are some guys that you play with but they are either in Texas or even further. I am sure Dennis is going to have a talk with you but that is between you and him. You and I (Prozac) are going to have a talk as well.
Nuff said for now!

Let's still enjoy the jokes guys.... I hated to make this public but Prozac wrote some things on this board (NOT PRIVATE) so this is the response. Prozac you should indeed be more mindful when you discuss other people's personal property. You never know what they are going to do or how they are going to act. A handsome man decided he had the God-given responsibility to marry the perfect woman so that they could produce children beyond comparison. With that as his mission, he began searching for the perfect woman.

After a diligent, but fruitless, search up and down the East coast, he started to head West. Shortly thereafter, he met a farmer who had 3 stunning, gorgeous daughters that positively took his breath away. So he explained his mission to the farmer....asking for permission to marry one of them.

The farmer simply replied, "They're all looking to get married, so you came to the right place. Look them over and select the one you want."

The man dated the first daughter. The next day the farmer asked for the man's opinion. "Well", said the man, "She's just a weee bit, not that you can hardly notice.....but she's pigeon-toed."

The farmer nodded and suggest that the man date one of the other girls. So the man went out with the second daughter.

The next day, the farmer again asked how things went. "Well", said the man, "she's just a weeebit, not that you'd notice......well cross-eyed."

The farmer again nodded and suggested he date the third girl to see if things might be better. So he did.

The next morning the man rushed in exclaiming, "She's perfect.....just perfect! She's the one I want to marry!"

So they were wed right away. Months later, the baby was born. When the man visited the nursery, he was horrified. The baby was the ugliest, most pathetic human you can imagine. He rushed to his father-in-law and asked how such a thing could happen considering the parents.

"Well," explained the farmer, "she was just a weee bit, not that you'd notice.....pregnant when you met her."

The questions that you will be asked on the test are from a larger question pool where one or two questions from each theory will come from this larger selection of questions. example: pool size 350 questions, actual test 30 questions from that pool.

If you can get a relatively consistent high score on the practice exam, you should have no problem passing!

Go for it! There is no shame in failing, you can always take it again.

The question pool is 'reportedly' changing. If it changes just to be 'different', then there will be no issues with old vs new, if you actually
know the material. However, again 'reportedly', the 'coverage' of the questions is changing, in which case even previously passed test will no longer be valid for credit.

The best thing to do is watch some of the sites like the ARRL web page for information.

Close...

Right now to get JUST 10M, which is pretty much comparible to CB,
5wpm and a tech test gets you a Tech Plus license. All the other
voice privlidges are still VHF and above. Although 6M can be pretty
darn fun.

Under the new rules, come April 15th, a 5wpm test and various degree
of difficulty tech test gets you licenses that allow voice on a variety
of
HF bands, from 160M through 10M.

Mike

Deputy Dawg <deputy@aol.com> wrote in message
news:ERwg4.19$Sw2.1716@news3.voicenet.com...
Why does everyone think all cbers will be hams now ?

It is 5wpm to get a license now. That will not change. So To be able to
talk on the HF bands like 15/20/40/80/160 you will still need to pass
the 5 wpm, and the Tech Theory and the general theory. Pretty much the
same as it is now. What is stopping them now from getting a license the
Code?

The after-April-15th Technician license authorizes the same privileges as
the present No-Code Technician license (UHF/VHF only).... a code exam IS NOT
and WILL NOT be required for this class license.

If the question pool you downloaded is a recent one (no older than 2 years), then you are studying the correct material. Be aware, that to get a Codeless Technician License PRIOR to April 15th will require passing the Novice AND Technician written exams at a VE test session.

After April 15, the exams will change to some extent... but I would imagine that anyone who can pass the present exams will have no trouble with the new ones.

If you'd like to take the tests on-line, go to http://www.qrz.com and press the "exam" button.

You don't have to have a license to incur the wrath of the FCC, nor a
callsign.
(it'd be pretty foolish to identify yourself if you were operating illegally
in the amateur bands) The old days of the FCC creeping around
neighborhoods with a DF'ing truck looking for miscreants has long passed.
GPS, Computers, RF signature "fingerprinting" and advanced DF'ing gear make
enforcement much simpler today. Using the latest technology, it's possible
to pinpoint a source of RF to within a VERY small area (less than a city
block). In fact, there is at least one instance of a notorious
'bootlegger' on 40 meters being apprehended while mobile (I believe it was
in Nebraska on I-80). In reality though, The FCC isn't going to go out of
it's way to go after the occasional problem... It usually looks to bust and
make examples of notorious scofflaws, ones that are well known, to spook the
'wannabes'.

How about neither -- Ham Radio was in trouble until they started lifting the code requirements.

And be careful who you insult (referring to the "no code CB whiners") - after all, they could be at the other end of the conversation on HF, code or not and get you call sign, remember who you are, and conveniently forget to send the QSL...

After all, with talk like that, people might think you have a bad attitude!

what is the name of your local ham club?
I WANT TO JOIN!!!
regretably,after april 15, there will still be a 5 word per minute code test
for ALL classes of ham license. eventually, the old scab will completely fall
off and show a new skin that all can appreciate without the burdon of a
dinosaur like the code on our backs. there will also only be 3 classes of
license according to an ARRL news letter that i've read. equality is finally
begining to replace the caste system in amateur radio. watch, freedom is
comming.
good luck with getting your ticket.
jeff

That's correct!... and those bands offer FAR more in the way of both long-haul and short-haul communication at ANY time of day... night-time will no longer mean the end of 'skip'... Wanna' yak with Kentucky from New York at 3am?... Wanna' yak with California from Florida at 8am?...Wanna' talk to Japan or Russia from Ohio at 7pm?... How 'bout South America at 10pm?... Maybe South Africa or Israel at 10am? Possibly Ireland at midnight?...Pick the right band, NO PROBLEM!

Think all this is gonna cost a fortune?... There are some, who really should know better, that'll tell ya' that... It's not necessary to buy the $3000 rig or the $4000 antenna and tower to talk on the Ham bands... a $250-400 investment in used gear will make you "world-wide". Antennas can be cheaply built of wire and coax and still be very effective. You won't have to shout over the other 20 stations, all on the same channel, to work the DX... find a clear frequency and call CQ... it's that easy! With my first $200 rig and $20 antenna, I managed to make contacts with over 125 countries and every one of the 50 states as well as ships at sea and at least one private aircraft. Even with only a 2 meter HT, (using a handheld beam antenna) I've seen one fella talk to the Cosmonauts in the MIR spacestation and to the NASA Space-Shuttle Astronauts.

> Before you buy.

Local radio shack stores usually have study guides,or the ARRL if you
don't mind paying more for a better book.W5YI has a website where you
can get software,this is the fastest.

> Cheers, John

You can spend a little or a lot on CB(1 band) and you can spend a
little or a lot on ham(many bands and modes)CB equip seems to get more
expensive,ham gear gets cheaper and better.
If new stuff isn't cheap enough the used equip I see isn't bastardised
like the used CB junk(which somehow demands a higher price AFTER
somebody goofed it up).I helped a kid purchase a used multi-band HF rig
putting 350 watts on the air for $120,and that included antenna.
The local club here in this little Montana town has rigs for new guys
to borrow.
If you like what your doing and where your at stay there.

The questions and answers will be the same but the answers could be in
a different order so don't try to memorise "A" or "B".I suggest you get
a study guide and actually learn something,thats the whole idea.
Good luck.

You fail to realize that im NOT in fianancial despair like most who sell stuff on these N.G. and further more I do NOT sell garbage, If more people realized that places like copper often sell re-packed units their not getting any super deals, (you get what you pay for) in this world. plus! i was offering a demco elec microphone modulator (tube type) plus a new SE D104 for 475.00 and no-one replyed at ALL, as far as im concerned its payed for and its not costing me a cent to keep it so in essence its no skin off my ass. period! i can only imagine some of the pathetic shacks out there that are buying garbage stuff for dirt cheap, thats probably why i see so many postings for help needed for repairing brand new radios that were bought for "bargain prices" good health to you and best whishes. Frank in CT.

Just recently i tried for the very first time to sell an item on the rec radio c.b. NG and i sadly found out just what im dealing with. I guess some folks think that everybody who tries to sell stuff is in fianancial despair, i've collected radios of all types for over 25 years, i have never sold garbage, and never will, I originally posted the Galaxy Saturn in a package deal; (the saturn with a demco electronics microphone modulator, tube type,PLUS a NEW D-104 SE desk mic) all for 475.00 and NO-ONE replyed, so i figured id re-post it just the radio alone, well what a mistake! i got more responses saying its not worth it, its too expensive, i can get more for my money, (ham gear) i can buy a new one with a warranty. Well folks im here to tell ya that the old adadge of you get what you pay for applies perfectly in this situation, if these people want to buy a re-pack radio or a USED ham rig thats no longer serviceable with parts or enough people that know any-thing about these old rigs, than go right ahead and do so.Im just now beginning to realize why i see so many postings on this N.G. for help needed in fixing their almost new radios (too many bargains radios out there i guess) well i hope you all have a nice year and good health to you all, I say its not costing me a cent to keep any of my radios, and next time i will know better than to try and sell anything I have for "what its worth" Frank in CT.

What are you doing to honor "the great" Martin Luther King today?

1) Reading The Communist Manifesto

2) Comparing MLK to other known philanderers like Teddy Kennedy.

3) Wondering aloud why MLK's birthday is a paid national holiday while the birthdays of George Washington and Abraham Lincoln are not.

4) Sending a donation to the Sons of the Confederacy in South Carolina to keep radical black activists from removing the Stars & Bars atop the Statehouse.

5) Wondering why we can have "Black History Month", "Black Pride Week", "Black Spring Break", etc...but not "WHITE History Month", "WHITE Pride Week", or "WHITE Spring Break."

6) all of the above.

Note: this address does not accept unsolicited e-mail. Please contain all discussion regarding USENET posts to the appropriate newsgroup thread.

Agreed, Firesticks suck. The ones I remember had a lot of extra wire on them so they could call them 5/8ths. I call them dummy loads. Stay away from any antenna that claims to be a 5/8ths that is not 5/8th wavelength or close to it long.

Do some REAL experiments, that smoke or blow up in your face when you screw up, then you will really get a taste of the REAL electronics workbench, the software is REAL cool but come on, soft ware cannot tell you that relocating a piece of coax a 1/2" will keep a 5 pill from going into oscillation, or tell you that a 2879 will stay together for a little while at 25 volts. Most of my experiments don't involve half of my test equipment, which by the way is worth a hell of a lot more than what one test station at devry has set up on it....

I take it that you are not happy with Copper?

Personally, I have always had good luck with Copper Electronics (not that I think they are very good in their customer relations BUT--EACH and Every Single Time I do business via mail, I count myself lucky if I get what I want and pay for. Copper Electronics Hasn't screwed me over, but that's not to say they haven't other people--or that I may not be NEXT! I much prefer doing business eyeball to eyeball and then if it is a piece bat guana, I know RIGHT where to go, and who to talk to EYEBALL TO EYEBALL. I have sold all kinds of radios, and always did it that way. AND I told the buyers that if they did not like what they bought, they could have their money back, or whatever they wanted in exchange.

For example, one person brought me two Cobra 146's that some ham handed geek had tried to open the clarifier on and had screwed them both up so bad they would
not even work, and I did not have a schematic for them at the time--however I did have
a stone stock 146 that I used to reverse all the damage done, and with the help
of very nice ham operator got them both repaired and on frequency. And due to my
own somewhat dire straights at the time, I could not even afford the tiny diode that had
been cut in both cases--although I left the case off and showed him the diode--and told
him which diode needed replacing. He left as happy as could be, and he had enough
skill to replace a diode once it had been pointed out to him. Ah well, so sorry for a long
winded spiel, I would love to be able to afford to buy your radio, but I have been buying
OLD radios that no one else seemed to want on ebay--some complete and working
and some not. Those are the only kind I can afford at present

Have a good day and a better tomorrow

Source record: 20506

Ranger 3500 10 meter radio. This radio is in fair condition, it has a intermittent RX, other than that it works good. I have the mic, power cord, and moble bracket $ 50.00 pus shipping.

2658. FS: CB / HAM Radio Gear

Newsgroup: rec.radio.cb
Date: 2000-01-17 00:00:00 UTC
From: "Christopher W. Buckley" <cwbuckle@mtu.edu>
Message-ID: <86096geon1@campus3.mtu.edu>
Source record: 20507
Cross-posted to: rec.radio.cb,mtu.forsale,rec.radio.swap

I have the following equipment for sale:

RCI2950 10-meter amateur tranceiver. Modified radio covers
26Mhz-32Mhz (Including CB Band) 25W output on SSB, 10W output
on AM / FM / Morse Code. Also has PA feature. This radio also
comes with a Astatic Road Devil power microphone, an extra power
cable, and a non standard bracket. (I installed mine in my vehicle
without harming the vehicle, and had a machinist put this together
to do so.) I would like $200 Or Best Offer for this radio.

250W Linear Amplifier w/preamp. This is a high-drive amplifier
to match the above radio. It has a low, medium, and high power
level, as well as a receive amplifier (preamp) Works very good,
but will have no need for it if I sell the radio. I would also
like $200 or best offer for this.

2 - "Penetrator" style antennas. These are the longer (about 4')
high whips with a coil running externally around the lower 8" or
so. Each has a very heavy magnet mount, never been able to get it
to shake loose (and believe me, I have tried) in the 6 months I
have owned them. At present, one is tuned for the 10-meter amateur
band, and the other for the CB band. They can even be retuned and
used together to get some directivity out of the antennas. $30 / OBO

Radio Shack SWR/Field Strength Meter. Can be used to tune the antennas. - $30

I will be willing to part with the entire package for $400.

Buyer pays shipping, if shipping is necessary. Though this equipment is
very operable on the CB band, it is not legal to do so. The amplifier
output is over 20 times the legal power limit for the CB Band.

FS: PK-88 TNC / Digital Mailbox

This is a very common model, and I will include a power supply and manual
for $50 + shipping.

(The PK-88 is a Terminal Node Controller, meant for pursuing digital communications
over radio means. It communicates serially with a computer, and modulates audio
through the microphone jack on a radio transmitter. Cables are available for many
different radios, and can be easily constructed if a premade cable is not already
available for your particular model.)

You are correct, but it makes it a hellava lot easier if your name is in the FCC database, do you not think the guys on 80 and 20 are not identifying themselves, while they are having a raucous time .The Fcc can also come in and inspect your equipment with loss of license hanging over your head if your interference problem with the neighbor is the result of ypur equipment.

The old days of the FCC creeping around
> neighborhoods with a DF'ing truck looking for miscreants has long passed.

==========
My point exactly use the old gps get a lon/lat punch it in the amatuer database bingo you have your offenders name address callsign date of birth etc. Plus the Ham community is self policing It doesnt take all that fancy equipment to drive buy someones house check signal strength and look up a call sign at that location.

Nah, I only ran just a tiny old palomar, and I was using
RG8 which was plenty heavy for my purpose. At that
time it was rare for anyone to run more than 200 watts
mobile. NOT that it wasn't done, just "rare"

I use one for my receiver and it works quite well.

If you want a small beam, I would recommend it... However, for a few more dollars, you can get the shooting star, and that does get you more features.

The comment about a coil loaded whip being more efficient than a plain 102 inch
whip isn't true for frequencies near the natural quarterwave resonance of the whip. Adding a center loading coil to a short whip will lower the impedance of the part of the whip immediately above the feedpoint. That generally makes it easier to drive, and may provide more performance than trying to drive with the whip without the coil.

Using flat strip wound edge-wise entails fewer turns per inch so, for the same inductance, more turns are needed on a much longer coil. This results in greater parasitic-capacitance than before and lower Q.

Self-capacitance has the greatest effect in large inductors, with high values of reactance.

But the claim about mobile antennas, as written, is nonsense. It sounds like an advertisement written to sell snake oil

Using copper plates is the proper way to mount transistors to your heatsink, anyway.

I would replace the aluminum with copper, about an eigth inch thick.

The transistor in question is TR32 in a Galaxy 99. It's one of those little
black ones shaped like a D when looking at it from the top.
This is the modulation limiter on the above radio and I know that by
removing it, it can ruin the sideband modulation. However, I read somewhere
that you could put a switch between the emiter leg and where it goes into
the board allowing you to turn the limiter "on and off" when one wanted to.

I have model DF 2461 and I'm interesting how to measure power from CB radio station. I heard that is required to connect into SO 239 (where goes antenna) resistor of 50 ohms which can stand watts of CB. Is this ok or there are other possibilities on which way I can solve it. I understand procedure of measuring.

Thanks!

Good luck !!! some people on this N.G. think that just because its used, it should be given away, they can also tell you of 100 better deals they've had, so "why should they buy your stuff" if you have a price in mind stick to it and dont let any-one discourage you. good luck and best wishes. Frank in CT.

Guess how many WHITE people died to free the blacks? Blacks were
taking one another as slaves long before the US was even mapped
territory. You are mistaken if you think it's alright to "celebrate"
"black history" and not celebrate white history, especially given the
historical significance of the accomplishments of white people.
One more thing, Michael King was a plagarist. Much of the "work" he
did in college was plagarized word for word. What a fraud.

Paul

I never had very good luck with any fiberglass antenna,
unless I was trying to avoid some kind of particular noise,
or to fit a certain set of requirements. And even then,
when I was successful in getting rid of the
noise, I lost just as much in sensitivity.

The closeset I ever came was with a 102" --Francis I believe,
although I actually did have pretty good luck with the Firestiks
considering how much less capture area they had. The Firestiks
I have owned, did not equal many of the other antennas that I
have tried--However, they performed "adequately" compared to some.
I ran all of them Barefoot to compare.

They still never came close to the performance of my
102" steel whip.

I have had many friends that swore by their 3 element beams--price vs performance.
I hear that they work exceptionally well on the "flat side" for skip, I used to like to
click my PDL-II over to the flat side and talk through all kinds of interference.

But--as one very astute person asked, WHAT DO YOU EXPECT OUT OF IT?

Skip? Avoiding local interference? Longer range in the direction you are pointing?
or saying: Wait while I turn the HOUSE in your direction? Truth to tell, all good
reasons, but some are a little more utilitarian than others.

Untrue. While there will be 3 classes of license, the Technician class,
will be a NO CODE license, same as now. The remaining classes, General
and Extra, will have a 5 WPM code test. Eventually (hopefully!) when the
ITU treaty is changed and CW proficiency is de emphasized, the FCC will
be free to completely remove it.

Indeed.
>
>Look forward to seeing ya. I just got a letter from Sonny Day inviting me
>into his club... So, that means I HAVE to make the break next year! ;-)
Me too. I, together with a young man from Hawaii received the longest
distance travelled award.

The other guy should of had it. Hawaii is farther away from Detroit than
England:-)
>You get that email with the values of the Messenger?
I received the e-mail which mentioned the Messenger and TS but no
values.

If you have data on their output combining torroid it would save me
considerable time experimenting. I will use Type 43 ferrite.

Phil / UK

I have three NIB/NOS 6ME6 Final amp tubes for sale. I believe these are supposed to be a good replacement for 6LQ6's. If I'm wrong someone correct me. I will ship all (3) tubes priority mail for 75.00 in the US... Two of these are RCA's and the third one is a Raytheon.... Thanks and have a good one...Jeff

I do not recommend hooking up your linear to any fuse alredy present in your vehicle. I may get a lot of heat, but the way I had mine connected was that I used good coax, and hooked the shield to the ground, and the center conductor
to the positive, and grounded EVEYTHING--and when I say shield to ground=I mean the closest ground, however, when I say center conductor, I mean to the battery positive terminal.

This also works very well for the radio as well.

I would like to buy a crank up tower in very good condition within a state
or two of NC.
I will come pickup the tower. I would like a tower 40'or taller and capable
of 18sq/ft. wind load.
Please email me directly at blueglow@mindspring.com.

Thanks,
Mark

First off, most of us couldn't give a rats posterior about your opinion on cw(by the way, its not gone yet, just reduced to a lower level) or on a few less desirable types on 80. I'm not sure about the "73's" or terminology problem your having with others here, but your mouth is such a sewer. Obviously you have been "tormented" over these issues or you are losing the argument and have to resort to that kind of language to defend your position. Pity! Its a shame that you can't discuss this in a dignified manner without the foul mouth, but I suspect you've been getting quite a bit of "hate" e-mail and this is your way of retaliation.

This is right of the ARRL's web page

1)Technician desiring to gain Novice/Tech HF privileges: You may pass the 5 WPM code test at any time, before or after April 15, 2000.

"The primary difference is that the FCC will stop issuing new Novice and Advanced class licenses after April 15, 2000. Beyond that, current Technician and Technician Plus licensees will be lumped into a single Technician licensee FCC database. When renewed, current Technician Plus licenses will be stamped simply "Technician." Technicians who have passed Element 1, the 5 WPM Morse code examination, will enjoy current Tech Plus HF privileges, but the burden of proof of having passed Element 1 (5 WPM or any higher Morse code element) will be on the licensee. The current "no-code" Technician license will continue to be available after the new rules go into effect, however. It will continue to offer the present VHF/UHF privileges.

Wrong,the "stigma"of the name n0-code tech will be more politically
correct as "technician"(sounds profesional) but you only need the 5WPM
for general and extra. AB7RS-ARRL VE.

if you are refering to me . you are confused !!!!!!!if you mean
someone else forgive me ,, i dont know you are do i . on a
different note cookies wife came by today and dropped of a new 5
pill design for me to try, just got it today didnt have a chance to
run it yet but case looks improved ,more heatsink larger more
efficient fan ,better preamp design holes in copper board for
transistors are perfect two really nice covered relays large imput
and output combiners , 1 1/4 transformers on output all silver plated
connectors remote jack in back lights under toggle switches
overall looks great hope it runs as good i will take a picture
tommorow put on ng later BusDriver.

now this is only my opinun witch aint much i cant even spell opinun
but anyway after you cut out a certain cap it seems to seperate your
words much better , your audio becomes more articulate muffle free
each word seems to cut off sharper look at it on a o-scope you will
see a sharp cut off between peaks ....brass showed mme this
about 6 years ago done it to all my 2510's i will go look now for
the cap no# later BusDriver..........

>This is the newest version out. It has the 477 final in it. What exactly

I HAVE A W5YI-VEC certificate that states that i successfully passed
3B and that i have successfully passed all elements for the following
operator license class: Technician Plus HF, i cant find the
little white paper that stated that i passed the 5 word code they
gave us a seperate piece of paper to hold incase they needed to prove
beyond a shawdow of a doubt.... now the vec certif. is signed by 3
ve's now is this all i will need to prove i
am a tech plus , al i should have to do is pass a general written
test and upgrade right? if i do that i will not beable to use my
new priv until april 15 or can i start sooner BusDriver

> > "WHITE Spring Break."

That would be considered racist. There was an all black mayors
conference sometime back. What if there were an all white mayors
conference. There is a miss black america contest, think of what a stink
would be raised if they tried to hold a miss white america contest.

In article <38836f2c.447205598@news.mindspring.com>, Paul writes:

>You are mistaken if you think it's alright to "celebrate"
>"black history" and not celebrate white history, especially given the
>historical significance of the accomplishments of white people.

Correct. Every minority group in this country is encouraged to "celebrate
their heritage", except for those of Eurpoean (white) ancestry.

well after tearing my house apart i found arrl/vec certificate of
completion of element 1A 5 wpm code ....thank god i am
saved after looking at everthing all you tech plus guys better have
this small white paper thats the only proff you have of passing the
code ....that outher certificate i have is no good without this
paper............that outher paper is when i passed 3b witch is the
written general i lost that credit because it is over a year old
......well i feel better whew i was worried for a while
cause i bet they will want to see that paper even though i have been a
tech plus since 1992 ....BusDriver

good one! if youve been around watching so long whats your old email? i havent seen the deputy around for long. i stand by my statement that anything thats "like new" should be just that. like new. if its modded, regardless if its done correctly or not its not "like new", its a modded radio.

>he didnt say it
>was brand new, you can have some thing that is in Poor condition, bad
>condition, great condition, average condition, like new condition, almost
>like new condition, or like you a mental condition.

2755. FOR SALE

Newsgroup: rec.radio.cb
Date: 2000-01-18 00:00:00 UTC
From: Craig <moonman@telcomplus.net>
Message-ID: <3883D102.7A46AD7A@telcomplus.net>
Source record: 20604

I have several quality items for sale;

1. Galaxy Saturn Turbo, I am the original owner and this radio is in excellent cond. all receive and some transmit modifications have been done and this radio will not disappointed anyone, I have had some of the best reports on good clean signal. I have mainly used this rig on ssb, but have also have had excellent reports on AM but rarely used that mode. Radio puts out 175 watts pep ssb with rf power all the way up and 40 watts all the way down. on AM with the rf power turn all the way down keys 4 watts and will swing 150 watts, with power all the way up it will dead key 50 watts and swing 150 watts. Radio will ship with original box and stock mike. (I would recommend a turner + 3 for ssb and a D-104 for am). $550.00 + shipping.

2. RCI 2950, I am the original owner and this radio is in excellent condition. all receive and some transmit modifications have been done along with a LT-2 Echo board with dual controls. will ship in original box with stock mike, dc power cord, and mounting bracket. $175.00+ shipping.

3. Gizmotchy Beam Antenna with two power boosters for a total of Five Elements plus a antenna support kit. Boom length is about 17', Horizontal and Vertical Gamma Matches. I have all original paper work. $ 200.00 + shipping.

wouldnt Columbus Day be a white history day? after all, he took land from indians, enslaved carribeans, and started the african slave trade and pretty much annihilated and robbed every society he come into contact with because they werent european anglos. every history course i ever took in school studied white people and our societies with just one month a year talking about blacks.

Most Radios come out of the box at 4 watts. Thats the leagal rated wattage of RF carrier that a
CB radio sould put out. If you have a dummy load to connect up to the radio then put the watt
meter in line and see what wattage you get.

>"WHITE Spring Break."
>
>6) all of the above.
>

man, i guess i was wrong about you.
i thought you were a narrow minded idiot.
i have seen the error of my ways though.
i can see clearly now that you are a closed minded asshole.
i was always complaining in the past about you and some of the others about
pseudo-spamming peoples questions with un-solicited bullshit about FCC rules
and "because-i-said-so's" concerning their radio practices.
now you are spamming the whole fuckin' news group about your racial views that
don't even remotely resemble radio topics.
unless MLK had a cb or ham ticket.

it seems that you're upset that there isn't a white history month / day /
minute etc.
you sound like the dog that sat on a nail and was too lazy to get up so he sat
there and howled about it.
get up off your ass and start your own white history period of time.
you can start with yourself as being the first white asshole to shame our race
in the new millenium. you almost took first place in the last millinum for

embarassing the ham community. that prize was shared by several others though but you are off to a great start guy!!!
good luck on rebuilding your credibility. you have a long way to go. if you start now, you might get there by the year 3000. i hear by then that radio will be out-moded and telepathy will be the only form of communication. OOPS, i guess that leaves you out, one can't read an empty mind.
jeff

2778. Re: R.M.S what is IT?

Newsgroup: rec.radio.cb
Date: 2000-01-18 00:00:00 UTC

RMS(Root Mean Square) is a type of average. If you tried to average the voltage points on a sine wave it would always come out to be zero. This is because the positive and negative numbers cancel each other out.So to get rid of the negative values each sample is squared then all the samples are averaged then the square root of the average is taken.

Tram D201 in good condition, Unlocked VFO and manual $275

Johnson Messenger 250 Base, Astatic Golden Eagle D104 Mic like new condition in origianl box, $300.00

PDX400 eight tube 10 meter base amp, Brown with gold knobs and Browning Eagle on the front, looks very nice with a Browning. 700-1000 watts PeP, in good working order. $280.00 SOLD

Cobra CAM 88 Tube 23 channel base Working with a copy of the SAMS, no Mic but I have the hard to find mic connector. $70.00

Siltronics Model 90 -6 VFO, Good cosmetic and working condition $70.00

BBE 411 Rack mount Sonic Maximizer, Rack mount, 1/4" in and out, will work for voise or musical instruments $90.00

HomeBrew Meter, 20/200/2000 Watts. Reads forward and reverse wattage. Made from a
Goldline coupler and Large scale meter $25.00

ParaDynamics 3 Way, large scale meter, CB meter, switch between Power/Modulation and SWR. $40.00

Demco Modulator in good working condition with a Fentone Broadcast Style Dual crystal mic head mounted on a D104 G Stand. Works great, Nice smooth audio $200.00

Crown IC 150 Stereo Preamplifier, with paperwork $150.00

Motorola UHF Power amplifier Model N1275A 450-470 Mhz $50.00

Yaesu XF-32A SSB Crystal filter for the Yaesu FT101 $35.00

Bird 50-125 Mhz Slug, 5,000 Watt Peak/1,000W RMS $40.00

Bird 50-125 Mhz Slug, 10,000 Watt Peak/1,000W RMS $40.00

Realistic Navaho TRC 30A 23 Channel Base in good condition $40.00

Realistic cb Phone $25.00

HomeBrew 10 meter 3 tube amplifier, Uses 3 military 24 volt filiment versions of the
6146 tube (they are available from RF parts at a reasonable price) Fresh tubes ,
adjustable bias, adjustable input SWR tuning, Load/Plate/ SSB/AM 150 Watts + $150.00

Yaesu FTdx 560 10-80 meter SSB/CW transceiver, Excellent condition, Plastic still on the face, All tubes in excellent condition, Very Clean, with copy of manual $250.00

Gonset GSB 101 amplifier, uses four 811 tubes, Good condition, No internal TX/RX switching, Must be done externally using a Dow Key relay. Works excellent with copy of manual. Pick up only in So. Ca. $300.00

Icom IC230, 2 meter mobile transceiver 146-148 Mhz FM, intermittent VCO, comes out of lock easily, No time or interest for this project $30.00

Midland 79-290 Removeable face 40 channel SSB/AM mobile CB. A-F bands, Dual 2SC1969 final design $120.00

Palomar 225 Blue face amplifier in good condition, Set up class C $90.00

Penetrator 150 10-40 meter solid state mobile amplifier, with band switching and filtering, Class AB1 with removeable control head $175

Galaxy DX55 40 channel AM/FM/CW Export radio with extended coverage, Freq. counter, Connex Echo, 5 tone, Lots of swing at over 20 watts output $150.00 in great shape with original box.

Pics available for all items, Prices do not include shipping.
Items ship UPS ground after receipt of MO

>
>Why do you automatically think someone is out to throw salt in his game 3
>seperate people have posted thier displeasure with him can they all be wrong?
>These people said they have also done business with him before so they may
>have
>a point. people like him because he sells them thier cb stuff when he
>screws
>them over they will be on here complaining too.
>
>
i have never dealt with exports are us but just from what i've read here, it appears there is some basis for the questions raised and steve has tried to answer them and is willing to present proof. like the guy that dealt with them and something wasn't delivered. steve had offered the box as proof that the item was un-deliverable. this generally denotes an inaccurate or un-readable return address which could be due to in-accurate information or even possibly damage done to the address label in transit.
the one who used a credit card for a purchase who says he didn't receive it. it's a simple cure to call the credit card company and do a stop payment on the purchase. the credit card co. will just do a charge back and take it off from the guy's bill. no sweat.
although the problems mentioned may seem large to the alleged victims, if there were only 3 out of what sounds like a booming business, that really isn't too bad. no business is absolutely problem free and i have seen far worse from larger, nation wide companies than exports are us.
the three people who have the problems may have a valid point but remember, there are two sides to every story.
there have been times that i have felt that i've been done wrong by a business and, for me, all it took was a little calm communication to straighten it out. sometimes it also took a lot of noise-making to get their attention. i've also seen people who would bring their problems upon themselves in one way or another and were dissatisfied with their results and tried to blame the business for it just to avoid or minimize their own losses. i can't say one way or the other what the case is here. it might be no ones fault and just a mis-communication like the un-deliverable item mentened above.
it seems that there's some noise making going on here. just as i can't say here that exports are us is 100% right in all cases here, you can't automatically assume that just because three people had some kind of problem that they are 100% right either.
as i said before, there are two sides to every story and the complaints, as

they are listed in this thread, are way too short to give ALL of the circumstances surrounding each issue.
this is not to say that the three are dishonest or are trying to hide anything, what i am saying is that, for the sake of keeping things short and to the point, i'm sure that not every detail has been posted and if they were, it my put a new light on just exactly what the problem was.

for the record, i have never dealt with exports are us nor do i know anyone who is connected with them.
i am baseing my observation solely on what i've read in this thread and the fact that i haven't seen anything negative posted about them to this news group before in the past year that i've been reading here.
have a good day.
jeff

Hi John:

Although I agree that the SWR changes can be subtle, it still has an effect on the WHOLE systems Standing Wave Ratio. And subtle changes can go to much worse very quickly. After all, why do they think you need to impedance match your system in the first place.

I am in total agreement with you and amazed that there are so many people out there that believe that it has no affect. Instead of twisting their arms to get them to give in, let 'em learn it the hard way.

We tried!

Bill:

Without getting into a pissing contest about this. And not claiming to be a know-all about every aspect of radio propogation, I have worked pretty extensively with coax to achieve maximum power advantage.

Is the feedline NOT an integral part of the output's entire load?

Why must the feedline be at 50 Ohms vs. say 100 Ohms or 300 Ohms if the feedline doesn't matter?

Since Voltage Standing Wave Ratio is the measurement of forward vs. reflected output, or actually a measure of ratio of heat or absorbed loss versus the radiated output, then Why bother to use only 50 Ohm coax? Surely you would be able to re-tune your antenna to overcome this impedance mismatch?

In fact, Why is it that lengths of coax less than 2 feet are unadvisable? Who would care if the impedance factor drops to 10-30 Ohms at these short lengths depending on frequency?

I can say without a doubt that the balance of your feedline (coax) will very definitely have an outcome on your total emitted output power, signal integrity, and can be a major factor in attaining minimum ACTUAL VSWR (vs. measured) and maximum radiated output power.

Also remembering that a minimum SWR does not necessarily mean that WHOLE system is radiating maximum power since you could have a low SWR and significantly less than the final amplifiers output through the filters, if you have an impedance difference in you final output stage, filters and antenna system, which includes your coax.

Just my opinion for posterity sake!

May be in the US bur here in Canada even a Cobra 148 GTL
sells new for $450 plus 14% tax. For a good second hand one
it is still over $200 stock. For a decent rig second hand
Ham rig it is around $600. New are well over $1000 plus 14%
tax. Too rich for a person on a disability pension!!!:-(((
Cheers,
John

Yep! the ol' "double standard". If you celebrate your heritage, and
you're a member of a "recognized minority", it's considered "expressing
your pride". If you are in the "white majority", and you celebrate your
heritage, it's considered "racism".

It's no wonder the politically correct are only loved by other oblivious
politically correct people.....

I thought it was the green, red and yellow wire? then you had to
connect the red to the green the other green to the yellow and the other
red to the yellow?

>... do you not think the guys on 80 and 20 are not identifying
>themselves, while they are having a raucous time..

It's not illegal to have a "raucous time" on HF... the ones who jam and consistently use profanity would be just plain stupid to ID... and they don't. (I'm on 20 & 80 meters regularly so I know...are you?)

>The Fcc can also come in
>and inspect your equipment with loss of license hanging over your head if
>your interference problem with the neighbor is the result of ypur
equipment.

...You think they can't come in and inspect an 'unlicensed' station?... They can inspect anytime, anywhere... go to this FCC site and see for yourself... http://www.fcc.gov/eb/inspect.html . Most any ham, running unmodified modern gear (or older gear, properly tuned), will not have FCC problems due to nieghbors. As long as your signal is harmonic-free (or within specs) and running under legal power limits (1500w), the FCC will have little to say.

>>The old days of the FCC creeping around
>>neighborhoods with a DF'ing truck looking for miscreants has long passed.
>>GPS, Computers, RF signature "fingerprinting" and advanced DF'ing gear
>>makeenforcement much simpler today. Using the latest technology, it's

>etc. Plus the Ham community is self policing It doesnt take all that fancy
>equipment to drive buy someones house check signal strength and look up a
>call sign at that location.

If you're afraid of the self-policing slant of Ham radio, stay on CB. Real FCC enforcement on the Ham bands has never been aimed at the on-in-a-while offender, or the fella who forgot to ID. They look for deliberate and consistent offenders to make examples of.

If you think your unlicensed status somehow makes you invisible to the Feds, you're dead wrong! If they had a good reason to find you, they would. You're livin' in a fantasy world if you believe otherwise.

Well, to be really pedantic, with the apostrophe it surely means it is
possessive and not plural. Therefore, 73's would mean "belonging to
best wishes". Quite nonscencical.

They occasionally have them on ebay, but they are WAY OVERPRICED THERE.
Depends on how bad you want one as to how much you are willing to pay.
While I admit that the radio has it's points, I have had many that were much
better
albeit, not as cool looking--or impressive looking. unfortunately for me
the first thing
I did was pull the cover and look at the schematic. Kind of ruined it for
me.

I have wrestled with this for years, and still have problems with it--
and truth to tell, it does make me feel better finding out that others
debate this unto death. I am no expert and as far as I can, I try to
learn as much as possible in the time I have. To me one huge problem
is in your definitions, ie; VSWR=Antenna or Antenna system? Where
is the point of measurement? EXAMPLE: swr meter connected to
Antenna, I changed the length radically=no change in reading. Meter at
the tx end and change length=various changes in reading. Do not get
me wrong, I am NOT trying to put gasoline on a fire, merely learn.

Sounds like pedantic semantics.... I understand the message, but shall *we*
all start griping about how *we* communicate now? Anyone get all hung up when
someone refers their single self as *we*? :) If you understand the intended
meaning of 73, 73s, 70 3rds, 73's, whatever, does the way someone says it
really matter?

I must take exception, I have a DSL connection, 56k connection, FREE 56k connection, AND a cable modem.

I know, I know--ADDICTION!!!!!!!!!!!!

The cable is FAST, the DSL is "somewhat fast" (spoiled!) and BOTH 56k are SLOW!

HOWEVER!! The cable is up then down up, then down. The DSL is ALWAYS UP!

Still, I haven't been able to decide between SPEED and FAST w/reliability!

BD,

I have had mine up for about 2 years now. It went through some heavy snow last year and went vertical and one of the elements bent. But everything is back to normal and I get reports of 20dB over from Europe with it!

It is a great size for my little house and on the flat side looks like a big TV antenna from below... you won't be disappointed with it!

good DX...

Your posting is "nonscencical", whatever that is. An apostrophe is
used to pluralize certain things, like figures - like 73.

From Webster's: "apostrophe - a mark used to indicate the omission
of letters or figures, the possessive case, or THE PLURAL OF LETTERS
OR FIGURES." (emphasis mine)

Worse than that, Kim. He's absolutely wrong. 73's is the absolute
correct way to pluralize 73. To believe otherwise is to be illiterate.

2822. Re: coax question again

Newsgroup: rec.radio.cb
Date: 2000-01-18 00:00:00 UTC
From: Stalking Ghost <pmetcalf@nbase-xyplex.com>
Message-ID: <862kflpch1@nnrp1.deja.com>
Source record: 20671

I referred to VSWR in the entire system. Each component of the system
must be balanced for VSWR to be minumum at the desired frequency.
And YES! The characteristic impedance of the system will change
as the frequency changes.

In an earlier post of mine:

In order to insure closest proximity to a perfect radiating
system, all of the elements must be balanced for optimum
output power and least loss.

This can only be done by making sure that all of the elemnets are
equally matched in characteristic impedance. Any differences
will be seen as a loss (reflected power lost as heat or absorbed into
othere circuits).

A 1:1 match being the theoretical perfect condition would require
that the output at the radio's connector to be exactly 50.0000 ohms,
the feedline to have a characteristic impedance of 50.0000 ohms at
the outputted frequency, and the antenna to have a characteristic
impedance of 50.0000 ohms at the outputted frequency.

In this case, you would have as close to a perfect match as possible.

Now! You can check you radio's output impedance using an impedance
bridge to insure that it is balanced right at 50 ohms (Tough to do
though for the average guy). Then check the coax using the same bridge
and a calibrated waveform generator, again looking for a perfect 50
ohms at your frequency of interest. If not, you can trim the coax to a
close proximation of odd 1/4 wavelengths until the coax is the closest
to 50 ohms as possible.
Next connect the antenna and use either a field strength meter
and tweak the antenna length until the field strength is the highest
reading.

Viola! You may not have a perfect 1:1 match, but you will have the
maximum output with the minimum loss.

Sorry it's so long but there is no simpler way to put it.

So VERY true, although the days of the White Van are pretty much history, they don't need that any more. I knew several that got busted years ago by the White Vans, and although they did not loose their license, they had to pay a hefty fine. They were busted not for jamming and causing hate and discontent, but for running power on out of band freqs.

If you can, please try to get a copy of a book tittled Seizing The Airwaves by Ron Sakolsky and Stephen Dunifer. You can order this book from http://www.AKPRESS.COM

In it you will find an indept interview of Napoleon Williams of Black Liberation Radio, Decatur Illinois.

You can also read about Mr. Williams in a chapter from a upcoming book tittled, Rising Up: Class Warfare In America From The Streets To The Airwaves. Read that chapter at: http://www.slip.net/~dove/book.html

Could you please tell me how all this talk of civil rights, children's rights, could be going on and no one has heard of this man, who fought for years to get the people of Decatur Illinois to stand up. What about the Rights of Napoleon Williams and his family?

Maybe someone should get a copy of SEIZING THE AIRWAVES and give it to Mr. Jackson. I can understand why the powers that be in Decatur Illinois wont mention Napoleon Williams, but I and others are at a lost as to why Black People who are saying that they are fighting to better things for us wont mention him. They should hang their heads in shame.

You are right you are no lawyer CB antennas do not have any Federal laws regarding height. It is called PRB-1 which is public law it is there to help the amatuers but no where does it say a town must let you have an antenna no matter if you are a ham or not .It is called reasonable accomodation, they must make an attempt to accomodate you.

> running under legal power limits (1500w), the FCC will have little to say.

You live in a fantasy land, I never said they could nt inspect your station
if you didnt have a license but if you have a license You must make it
available or lose the license, with out a license you can tell them to pound
sand If I have no license to lose . Ill wait for the sherrif to come with
his warrant You tell me that is anytime anywhere I don't think it is . There
are thousnads and thousands of cases where legal stations interfere with
neighbors equipment, it is usually the faulty equipment not the amatuer.
yes the FCC usualy has little to say been there done that

>

I figure I'm setting myself up for all kinds
of abuse, but this group seemed like a good
place to ask what seems like a valid question.
I browsed a FAQ but I'm hoping someone can
address my question directly.

Is a CB a viable alternative to a cell phone/PCS
when the only goal is to be able to contact
someone if my car breaks down? I'm tired of
paying a high monthly fee for a phone that
should only be used in emergencies. I assume
that a CB would require a one-time purchase fee
and absolutely no cost for any use.

If so, can anyone recommend models that would
serve this purpose?

Are the antennas or other equipment "dangerous"
to one's health in any way when they're not in
use?

OK, stop laughing now.

Message-ID: <Xr4h4.251$pC.13472@news.uswest.net>
Source record: 20687

Question: what about the 60' rule, of course I ignored it if it exists by putting
my antenna up in the top of a tree--100' of rg8 and maybe 2' of extra from window to CB. And then there was the PDL-II up about 70' but I have read on this ng that there is an ablsolute limit--which I ignored as I figured that the radio was
only as good as the antenna. Not that would stop me even now as I always ran
a barefoot base, but with the height, I could talk to almost anyone.

I had a Penetrator up in the top of a tree and the power company came and took it down as they had built a substation right under it later. They brought
in the biggest cherrypicker I had ever seen to do it too.

That is what I thought, I have a signal generator that is listed at twice
that, don't use it, I use the $200 generator, but it is still worth a lot,
Not to mention the spectrum analyzer and signal analyzer..All HP.

My bad, what i meant was cb antennas have no federal laws in there favor like PRB-1 , the max height is 60' for CB antennas, that is unless your towns zoning laws says otherwise. Amatuers have PRB-1 and a public law signed by Old billy Clinton to fall back on and this still does not guarantee you any specific height if your town can prove otherwise.

2850. Pinout for Mic Plug

Newsgroup: rec.radio.cb
Date: 2000-01-18 00:00:00 UTC
From: rtodd@midgard.threefoot.com
Message-ID: <slrn889ufe.5s3.rtodd@midgard.threefoot.com>
Source record: 20699

I am looking for the pinouts for the Uniden HR2510 and and Cobra 4-pin radios. Reason I am asking for the HR2510 pinout is because I want to replace the 4-pin plug on my D104 with a 5-pin plug so that I can use the microphone on my HR2510 which I use as a base rig.

If anyone can help me with this information, please reply in email asap.

Thanks in advance!

73s de KRT-218!
Robert

Oh go to hell.

I bought a Kenwood for just slightly more than you are selling that pile-o-junk for (I know.. I have 2 Galaxies, and I don't like either one!) and it is only a couple years old....

WAY NEWER TECHNOLOGY than Uniden had in the 80s!

Just think, that "new" radio you have / are trying to sell, is based upon the old Uniden AM / SSB chassis of the mid 80s.

Bet that turns ya on, huh.. It is known to drift on SSB, destroy televisions when the AMC circuit is opened up to 100 percent modulation and ONLY goes from 25 to 28 megs...

A FAR better deal than a Kenwood, I agree! haha

Toll Free

Where talking antennas and you spout off about EWB?

Boy, I have been using EWB since it's inception, and even farther back when it was entirely text based... A bunch of scripts called SPICE.

Antennas use NEC.. You knew that, though.

And EWB is NOT accurate at RF frequencies at high power.... Even the manufacturer will tell you that.

Message-ID: <ZM6h4.60$oc4.1140@insync>
Source record: 20711

Sometimes it is just too simple.

The "green wire" goes from the input of the AUX (10 meter) position to a RC filter to ground.

The LC filter is a bandpass filter for 12 meters on up... Effectively shorting it to ground.

Remove that wire, and it is all good.

This mod works on all but the AL80.... That amp you have to order the input board, however, it is free for the asking (with a valid ticket, of course).

Take it with a grain of salt, but I hear Copper(among others) are being leaned on and feeling pressure from the Feds., either directly or indirectly through their suppliers over concern of easily modifiable 10 meter radios. From what I understand, Copper themselves do not know when, or IF, these supposed shipments will arrive. Everyone is basically taking a "wait-and-see" attitude concerning Holingsworth's next maneuver.

I find this very hard to believe.

Charley and I go back quite a few years, and although he is somewhat strange
at times, he is:

A. Not black.
B. Not racist
C. In love with the dollar... He doesn't turn away a sale unless your a
dick or have screwed him in the past

So, better look in the mirror before you say anything again, because their
are people on the newsgroup who WILL put you in check.

And Diane follows the same guidelines as above.

You men provide a fine example of the typical piss ingorant CBer. The same mud duck cracker heads who show up on the bowl with 250 watts calling skip land. When the brothers won't talk to your silly white ass you start that Mark Furman bullshit. In this new century i hope you all collectively stick your ragged as radios in your ass.

The last time i had the unpleasant experience of so many stupid white bastards was a recent Saturday evening when i stumbled across an ALL WHITE CB BREAK in my home town. These were some of the most unclean foul mouthed cocksuckers i have ever laied eyes on. You could not scare up a full set of teeth among the whole bunch. As i set down in a booth near this group of loosers one they called Double Clutch was having a big laugh over bleeding on the local church PA System. He claimed he was gonna whip the ass of the pastor if one more complaint was filed with FCC. Oh these yellow toothed crackers were rolling in the floor. This group spoke of dead keys on the local REACT group who monitored CH.9. A real wonderful group of white CBers. Have you peckerwoods ever listened to the black people who operate in your area? not once have i heard them dead keying each other. You won't hear them threating to whip the ass of the pastor and you don't hear them playing those stupid sound modules of a donkey farting. Do you white bastards have any idea how ingorant you sound on the air? if you did you would never key another mic. I will be at Hot Springs this year. One thing you will notice at the superbowl functions (you white boys let this burn in real good) A MUCH HIGHER CLASS OF PEOPLE. I went last year and was welcomed with open arms. No one was digging there draws out there ass, i observed no one passing gas as i observed at the truck stop break. I refuse to talk to another toothless white bastard on 11 meters. You cocksuckers can kiss my entire white ass.

I am a ham operator...but I think I still spend more time on the cb band
than the ham bands....most of the time I'd just rather talk with the locals
on the radio than get involved in some dx contest....I'm a general class,
and the bands I use the most are 2 meters and 11 meters.....Now why did I
bother with that code? I could have done just fine with a tech class....Tom

Then you should know what you are demonstrating YOURSELF is prejudice, generalization and stereotypical commenting.

This could go on and on forever and ever. I could call you a murderer (or whatever they are saying) just because you are Black (assumption). Then you could call me prejudice for either this entire post or that comment, just because I am white. Give it up. The past is the past. The past sucks, and those who fought for freedom of blacks should not be forgotten, not to mention those WHITES that helped during the underground railroad era. It goes to show that ASSHOLES/BIGOTS are ASSHOLES/BIGOTS, and everyone else is just a person. Do you get it?

Judging by your use of the English language you are either a troll or you're really just the pot calling the kettle black.
I want you to reread your post and you tell me just how ignorant you sounded in portraying those that you portend as ignorant and foul mouthed.
As far as "a higher class of people" are concerned, I guess you haven't been around long enough to realize there are, in every race, a few that deserve the moniker of Nigger/White trash. That goes for all the rest of the skin colors as well.
Let's go to the choices of words you objected to. I guess you haven't hung out on a street corner or been in a situation where men...or women.... have congregated and resort to the use of certain words when not in mixed company. I do it, black people do it, yellow and red people do it. Who really gives a shit? They are, after all, just words. It's how you use or don't use them that presents who you are. You present yourself, in my opinion, as being just like the people you found ignorant and foul mouthed.
Have a good life. BobC

I have been told that there is a SSB handheld available for CB, but have not seen
one. If so, and IF it is a reasonably good radio, that is what I would buy. In fact,
I might just check into this further as I go elk hunting almost every year and we
get quite aways apart and in some pretty rugged terrain, and I know that barring
my getting a ticket along with my friend, (who has no interest in radios) the only
way to go is SSB. I know, a lot of people are believers in FRS, but I have used
them and they do not have nearly the range of a regular CB handheld with a
good antenna--not a "rubber ducky."

Just a thought, but I would use an external SWR meter rather than a light
on the radio itself--they have been known to be WAY wrong. If the built-in
meter only measures and checks for a certain maximum reflected power,
when you upped the output, you also upped the amount of reflected power
while not changing the ratio.

Just a thought, and I could be totally wrong--that is why I suggested using
an external meter.

Source record: 20763

Back last year when I installed my radio and amp(400 watt) in my truck I lost my alternator with in 6 months. I replaced it with a Bosch reman. Now, 5 months later it just went again. What happens is the pully and fan strip out on the shaft. I guess as I am driving along and key up it jerks on the pully and fan until it strips.

Truck is a 1994 Chevy turbo diesel with a 100 amp CS-130 with dual Optima's. Any one have a suggestion for a SUPER DUTY alternator that I can install with out making custom brakets and wire harness?

Anyone have success with the alternators made by Premier Power Welder?

thanks.

The center tap of the transformer is at a voltage minima point, therefore, it <<really>> isn't necessary to put any feedback.

However, if you fall out of balance, it will send GOBS of RF through the entire amp, out the power leads and straight into the car!

I have a couple of questions regarding feeding the collectors current in a typical push pull class C design. If your so kind to help it is greatly appreciated.

Normally I tap into the rear (sounds kinda kinky) of the broad band transformer with a small wire, that will needle through a couple of # 64 ferrite beads. Standard method. Lately I have been tapping into the transformer at the same spot with no ferrite bead and larger gauge wire and have had no adverse effects. Noise,etc. Now my question is, does the ferrite on the broadband transformer act as a filter? since the current must pass through the ferrite tube to the collectors? Second, I would like to try feeding the collector strait with a heavy gauge wire but I can find a source for a larger I.D. ferrite bead. I don't want to go to Amidon and buy half a million of them either.

> post might have been helpful if you hadn't typed the last 4.

The poster was trying to make humor-The first two lines illustrate the
logic of why you might want to investigate further the elimination of
the CB/cell phone idea. Good points.

And why does the good sense of the first two lines are negated by the
stupid humor of the next four lines? Are you you not capable of
seeing the humor/satire and then dismissing such? Take the Wheat and
seperate the chaff or else ignore the post and replace the Cellphone
with the CB.

> References to smoking, drinking and chasing women really
> only help to tarnish the reputation of the stereotypical
> CB user.

Explain "Stereotypical" and if it means the same thing as listening
to Channel 19 and coming to conclusion without facts?

All that was missing was a "yee-haw" at the end.

Sumising that a Yee-Haw should be at the end is pre-judging
and "stereotypical" Don't you think?

Besides, in LaJolla, doesn't everybody have a cell phone?
Oh, my, I am being "stereotyping" so I must watch out for the
PC Police.

If you have an analog VOM then you can find out the EBC pins by making
some tests. A 2SC transistor is a NPN transistor. Use the VOM OHMx1 range
to test any pairs and expect to see behaviors like diodes. The base pin
can be identified because it will appear as a "P" vs. the other two pins.
That leaves the other two to be identified as collector and emitter.

In the case of a NPN transistor, the collector is always connected to "+"
supply (Vcc) via some components (may be an RC, R, etc.). The emitter on
the other hand is always connected to ground via some components (RC, R, etc.).
If you measure the voltage of these two pins, the Collector should be
at a higher voltage than the emitter.

In the case of an PNP transistor then the above are reversed. The base pin will
be a N and collector/emitter being P. The voltage of Collector will be more
negative than that of the emitter.

2925. Re: Why does everyone think cber will go ham

Newsgroup: rec.radio.cb
Date: 2000-01-19 00:00:00 UTC
From: AB7RS <tglenn@imt.net>
Message-ID: <38863863.13C3@imt.net>

Most of the HF ham freqs are lower than CB so coax is not a big
factor,not much loss even with RG8 @7MHZ.Plus CBers seem to be too
worried about SWR.

This Saturn I have has a malaysia board in it and a Turbo power supply (
transformer) in it, SO drop dead you fuckin RETARD NO-BODY, YOUR probably a
fuckin RE-PACK and your mother is just too ashamed to tell
you!!!
!!

So, what your saying is that your Saturn can't possibly be a new radio,
since it comes with a configuration that doesn't exist coming out of JP's
factory, right?

Don't try to fuck around here... I know the people that bring the Galaxy
Saturn into the country....

As well as the people who bring the DX series in.

You got ripped off by a snake oil salesman in Ct., and he should be shot.
He (I hope to fucking God) bought that radio at retail price, or he damn
near doubled his money when he sold it to you.

Their is a sucker born every minute, and at this point, with your foul
language and idiotic behavior, you have proven that YOUR the idiot in this
thread.

No go sit in the corner. When you ready to come out and play like a nice
boy, and get off the "I got it for this price, so nobody else can get it
cheaper, or THEY got screwed" soapbox, people might like you.

Until then, fuck you.

Cut the green wire.

All Ameritron's (READ MY POST YESTERDAY ABOUT AMERITRON LINEARS!) have a green wire on the bandswitch that you cut. Sans the AL-80. That one you have to either get the input transformer from Ameritron or build one.

Any will work fine because price doesn't mean acuracy for
SWR(Wattmeters are another story)plus an SWR meter doesn't need to be
very acurate,if your not shorted and in the ballpark null wise-good
enough.

2 meter ham beats them both by a few miles without repeaters and if
you use repeater networks(why not use the other guys gear for free?) you
beat them by hundreds or thousands of miles.I don't think that much of 2
m but for what you want its the best.

Another poster also mentioned the sarcasm/insults and
wondered why some people must include them in their
responses.

I was just looking for some technical advice, not a
lesson on how to save money.

> Explain "Stereotypical" and if it means the same thing as listening
> to Channel 19 and coming to conclusion without facts

Stereotypical, meaning that the references to smoking,
drinking, and chasing women might cause a negative
opinion.

At any rate, I cancelled the message soon after posting.

There's nothing positive that can come from further
replies to this thread.

2946. restructuring FAQ

Newsgroup: rec.radio.cb
Date: 2000-01-19 00:00:00 UTC
From: AB7RS <tglenn@imt.net>
Message-ID: <38865C26.27F0@imt.net>
Source record: 20795

I know this is a CB group but the restructuring is discussed a lot and a lot of questions might be avoided by this FAQ>

Generalï¿½Info ï¿½ï¿½FCCï¿½Reportï¿½&ï¿½Orderï¿½(PDF) ï¿½ï¿½Aï¿½Summaryï¿½ofï¿½Restructuringï¿½Upgradeï¿½Possibilities

1. Will anyone lose any Amateur Radio operating privileges after April 15, 2000?

No! All current license classes and privileges will remain the same, and all licensees will be able to renew their licenses indefinitely.
(The sole exception is for those who obtained a Technician license or exam credit prior to March 21, 1987--see question 4, below.)
The primary difference is that the FCC will stop issuing new Novice and Advanced class licenses after April 15, 2000. Beyond that, current Technician and Technician Plus licensees will be lumped into a single Technician licensee FCC database. When renewed, current Technician Plus licenses will be stamped simply "Technician." Technicians who have passed Element 1, the 5 WPM Morse code examination, will enjoy current Tech Plus HF privileges, but the burden of proof of having passed Element 1 (5 WPM or any higher Morse code element) will be on the licensee. The current "no-code" Technician license will continue to be available after the new rules go into effect, however. It will continue to offer the present VHF/UHF privileges.

2. I currently hold a Tech Plus license. Can I take the current General class written examination (Element 3B) right now, then apply for an upgrade to General after April 15, 2000? I'm a little confused on this point.

Yes. The FCC has told the League that current Tech Plus licensees holding a Certificate of Successful Completion of Examination (CSCE) for Element 3B on April 15, 2000, may apply for a General class upgrade. The present Element 3B examination has 30 questions; the new Element 3 test will have 35, so the advantage to test before April 15, 2000, is slight. CSCE holders

must attend a
Volunteer Examiner session, complete Form 605,
attach a valid CSCE, and pay the required application fee ($6.65 for the
ARRL-VEC), if the VEC you use charges a fee. To be
valid on April 15, 2000, your CSCE will have to be dated on or after
April
17, 1999. A CSCE is only good for 365 days. (See
also A Summary of Restructuring Upgrade Possibilities.)

3. I hold an Advanced class license. Can I take
the current Amateur Extra class written examination
(Element 4B) right now, then apply for an upgrade
to Extra after April 15, 2000?

Yes. The FCC has told the League that current
Advanced licensees holding a CSCE for Element 4B on April 15, 2000, may
apply
for an Amateur Extra class upgrade. See question
2, above. The advantage here is that the current Advanced licensee will
face a
slightly shorter 40-question examination under the
current licensing regime to get a CSCE for the current Element 4B. The
new
Extra class Element 4 will contain 50 questions
(and is expected to contain many of the present Advanced class question
pool
technical questions). To be valid on April 15,
2000, your CSCE will have to be dated on or after April 17, 1999. A CSCE
is only
good for 365 days. (See also A Summary of
Restructuring Upgrade Possibilities.)

4. I got my Technician license under the old
system prior to March 21, 1987, and I now hold a Tech Plus
license as a result. I understand that I'm now
eligible to upgrade to General without having to take an
additional examination. Is this correct?

Yes. Holders of a pre-March 21, 1987, Technician
class license (or a CSCE) may claim credit for a new General class
license after
April 15, 2000. This is because under the old
system, the written examination for Technician and General class was
identical; the
only difference was that Technicians had to pass a
5 WPM Morse code test, while Generals had to pass a 13 WPM Morse code
test.
The upgrade is not automatic, however. You will
have to apply through a Volunteer Examiner test session, complete Form
605,
attach documentary proof of having completed the

requirements for a Technician license prior to March 21, 1987, and pay an
application fee, if any, to the VEC involved.

5. What do I need for "documentary proof" of
having held my Technician license before March 21, 1987?

Obviously, if you have an original or a copy of
your Technician license issued anytime prior to March 21, 1987, that would suffice.
Other documentary evidence could include an
original CSCE for Element 3 issued prior to that date; an FCC verification letter of
having held a Technician license prior to March
21, 1987; a document from the FCC's contractor, ITS Inc; or possibly a Callbook
listing dated prior to March 21, 1987, indicating
your license class as Technician.

6. I've lost my old license and didn't keep any
copies. How do I get verification from the FCC that I held a
Technician license prior to March 21, 1987?

You can write the FCC, Wireless Telecommunications
Bureau, 1270 Fairfield Rd, Gettysburg, PA 17325. Provide the FCC with your name, address, and current call sign as well
as all details of your licensing. The FCC may be able to verify in writing that you
held a Technician license prior to March 21, 1987.
You also may contact ITS Inc (visit http://www.itsdocs.com/). For a fee, ITS
will research prior licensing records and should
be able to provide you with the necessary documentary proof.

7. I've got an Advanced ticket now. Someone told
me that I'll revert to General on April 15, 2000. Is this
true?

Absolutely not, although this rumor has been
making the rounds on the Internet and on-air discussion groups. You will continue to
be an Advanced class licensee and have Advanced
class privileges after April 15. Again, no one loses any privileges, and all license
classes stay the same.

8. How can I find out where there's a Volunteer
Examiner session so I can apply for an upgrade or take an
examination element?

A session search engine is available on ARRLWeb at
http://www.arrl.org/arrlvec/examsearch.phtml. Also, feel free to contact local

VEs or ask local clubs for information on testing sessions in your area.

9. I now hold a General class ticket. Since there won't be any more Advanced tickets issued after April 15, 2000, can't I just take the current Amateur Extra written examination (Element 4B) and use the CSCE to get my Amateur Extra when the new rules become effective?

Nice try, but, the answer is no. If you're going to take your examination before April 15, 2000, you must complete both Element 4A (instant upgrade to Advanced) and Element 4B, then take your CSCE for Element 4B to a VE session on or after April 15 to apply for your Amateur Extra ticket (this means filling out Form 605 and paying the application fee, if any, to the VEC). And yes, in this example, it means you would need to appear at two test sessions. You also could just wait until April 15 and take the single 50-question Extra class written test. (See also A Summary of Restructuring Upgrade Possibilities.)

10. I've got my Advanced now and want to take Element 4B before April 15, 2000. What license manual should I study?

The new question pool has not been developed yet for the post-April 15, 2000, tests. Use the current Extra Class License Manual, available from the ARRL. New study guides will be developed to reflect the new testing regime. Likewise, those wanting to take Element 3B to upgrade from Tech Plus to General should study the current General Class License Manual, available from the ARRL.

11. Can I use my valid Element 4B credit CSCE for the Extra written examination element to upgrade before April 15, 2000?

Only if you also pass the 20 WPM Morse code examination. Otherwise, you'll have to apply after April 15, 2000, when the new rules become effective. Remember, your Element 4B CSCE must be dated on or after April 17, 1999, in order to be valid on April 15, 2000. A CSCE is only valid for 365 days. (See also A Summary of Restructuring Upgrade Possibilities.)

12. I'd heard that Novices and Tech Pluses would
be getting an automatic upgrade to General when the new
rules go into effect. Is this true?

Unfortunately, no. In its comments to the FCC, the
ARRL had proposed that the FCC upgrade all holders of Novice and Tech
Plus
licenses to General class as a one-time action to
permit "refarming" current Novice/Tech Plus HF subbands for higher-class
licensees. The FCC did not adopt this
recommendation in its Report and Order of December 30, 1999, however.

A Summary of Restructuring Upgrade Possibilities

We emphasize that no one will lose any current
Amateur Radio privileges as a result of the FCC's "restructuring" order
of
December 30, 1999. There is no need to upgrade
if you are happy with your current privileges, and no one's license
class will
be "downgraded" if that individual chooses not
to upgrade now or later. Also note that there are no automatic upgrades.
All who claim prior test element credit (eg,
with a Certificate of Successful Completion of Examination or CSCE) must
present
their credit(s) to a VE team at an exam session
and pay the appropriate processing/application fee, if required.

Below is a summary of some of the upgrading
possibilities afforded by the FCC's Report and Order of December 30,
1999.

Upgrading to Amateur Extra Class Without 13 or
20 WPM Morse Code Testing

Advanced: With no further code testing, to be
ready to upgrade to Extra on/after April 15, you must pass Element 4B
now
and present your Element 4B credit to a VE team
on/after April 15. Or, take Element 4 on/after April 15.

General: With no further code testing, to be
ready to upgrade to Extra on/after April 15 you must pass Elements 4A
and 4B
now, thus getting your Advanced upgrade before
April 15. Then, take your Advanced upgrade and your Element 4B credit to
a
VE session on/after April 15. You also can take
both Element 4A and 4B credit to a VE session on/after April 15. You
also may
pass Element 4 after April 15 (Element 4A cannot
be bypassed; if Element 4B is not passed in this scenario before April
15,

on/after April 15 the Element 4A credit
previously earned would have no value toward any future upgrade under
the new
system).

Technician Plus or Technician with 5 WPM or
higher Morse code credit: To be ready to upgrade to Extra
on/after April 15 with no further code testing
you must pass Elements 3B, 4A and 4B before April 15, then take this
credit to a
VE session on/after April 15. Or, you must pass
Elements 3 and 4 on/after April 15. (Technicians able to document
passing the
Technician/General written examination before
March 21, 1987, can present this proof as credit for Element 3B before
April
15, or as credit for Element 3 on/after April
15).

Technician (no Morse code credit): To be ready
to upgrade to Extra on/after April 15 you must pass Element 1A, the 5
WPM Morse code test, and you must pass Elements
3B, 4A and 4B before April 15, then take this credit to a VE session
on/after April 15. Or, you must pass Elements 1
(the 5 WPM Morse code test), 3 and 4 on/after April 15, to qualify under
the
new system.

Novice: To be ready to upgrade to Extra on/after
April 15, you must pass Elements 3A, 3B, 4A and 4B before April 15, then
take this credit to a VE session on/after April
15. Or, you must pass Elements 2, 3 and 4 on/after April 15.

Other Upgrade Examples

Technician Plus or Technician with 5 WPM or
higher Morse code credit desiring to upgrade to General:
With no further code testing, you must pass
Element 3B before April 15, then take this credit to a VE session
on/after April 15.
Or, you must pass Elements 3 on/after April 15.
Grandfather credit is also acceptable, per above.

Technician desiring to gain Novice/Tech HF
privileges: You may pass the 5 WPM code test at any time, before or
after April 15, 2000.

Novice desiring to upgrade to General: You must
pass Elements 3A and 3B before April 15, then take this credit to a
VE session on/after April 15. Or, you must pass
Elements 2 and 3 on/after April 15.

Novice desiring to upgrade to Technician with HF
privileges: You must pass Element 3A before April 15, or pass
Element 2 on/after April 15.

Buy a cheap CB, tune it to Channel 19, and listen. Listen real well.
Would you trust your life, or the welfare of your family, to Channel 19?
Buy cheaper gas, quit smoking, don't drink, and quit chasing women. This
should save enough so you can afford the cell phone. Imagine that your
16 year old daughter is stranded on a lonely highway, and all she has is
the CB.

You are the ignorant one! My company gets them new not refurbished and they sell for $379.99 Saturn Turbo's are $529.99. ALL NEW from the mfgr. You best be worried, cuz by your statement, you are saying that Saturns are getting returned left and right cuz more companies sell them cheaper than what you got yours for. So whats that tell you?

On 18 Jan 2000 21:41:47 GMT, jj475171@aol.com (JJ475171) wrote:

In my opinion, any decent VSWR bridge (meter) is accurate. You are measuring a voltage ratio, no magic here. Contrary to popular belief, the Bird model 43 is not the most accurate instrument around. It's misleading measurements of AM modulated power are legendary among the CB set. :->

>Is a CB a viable alternative to a cell phone/PCS
>when the only goal is to be able to contact
>someone if my car breaks down?

I don't know why a**holes can't answer questions without sarcasm or insults.

The CB could at times be effective for emergencies, but definately not a reliable source for help. If you're broken down in a rural area, likelyhood of getting help on the CB is slim to none. For the nominal $18 for a cell phone per month, it is reliable help in an emergency.

Change the Impedence of the coax and or the box and make them match and the problem will go away. Problem is that the impedence of the box is not the same as the coax.

Get real and grow up! In fact there are several Black users of
11meters in my area that throw carriers and have sound toys in there
radios. Maybe you dont live in Oakland. May not be a donkey fart but
sounds similar to a chain saw (Run-nigga-nigga-niga). Post a message
like this in this newsgroup, expect to be throttled. People like you
are the ones that seem to keep the act of racism alive. Get a life and
job and when you put in your time as a citizen, then and only then
will you have room to complain about your hate breed. Try to stay off
welfare and take your little radio shack CB back to the candy store
and buy some more. I bet they call you Toby back there in Cob County
Georgia. Do they mock you by saying Squeal Like A Pig? Heh!

Try putting it on a bigger piece of metal, Like a car.
Make sure there is nothing in between the magnet and the body of the
car. If you allready have it on a car, then try and adjust the whip on
the antenna. if that is not the case then you may have a shorted
antenna, coax or perhaps your coax is broken inside the cable
somewhere.

Go FRS or get a ham license and go with a UHF/VHF radio. Better
clarity and less interference on these bands.

Yes, There is a set screw in the shaft that will allow you to do this.
Shorten or lengthen. Also try an external SWR meter and check it. If
this dont work, Get a multi meter and check for continuity. You may
have a shorted or broken coax or blown antenna. Put one of the test
probes on the center conductor of the connector and the other probe on
the outer edge of the connector. If the Meter beeps at you, you got a
short some where. If the meter doest do anything, Take the top portion
off the mount and check end to end of your connections.

pound
>sand If I have no license to lose...

True... you might stand to lose your license if you refuse the FCC inspector entrance to your shack.. you may also incur a fine. If unlicensed though, little changes.... sure, if you don't have a license, you won't lose one (duhhhhh!), but you'll still incur the fine if you refuse them entry. Obviously you didn't check out the FCC Enforcement Bureau webpage I posted.

>Ill wait for the sherrif to come with
>his warrant You tell me that is anytime anywhere I don't think it is...

What you think hardly matters to the feds... you go ahead and refuse the FCC entry and you'll incur the fine... They won't bother waiting for the Sheriff, they don't need his authority or a warrant... they're not there to search your house, just inspect your radio. If you refuse them entry to inspect your station (licensed or not) they'll politely go away... but you'll be presumed guilty and fined or ticketed as they see fit. .. (once again, check the Website, or maybe you'd rather continue in your fantasy?). http://www.fcc.gov/eb/inspect.html

>I have been a ham for 21 years why should I be afraid Now of self policing.
>If you havent noticed Riley is changing the enforcement end as well.

Hollingsworth was the best thing to happen to Ham radio till restructuring came along... he's made a huge difference in a very short time frame.

Well, a fellow ham.... and for 21 years, yet. ....And I suppose your callsign is Deputy Dawg? You know, of course, that your Ham license would be on the line if the FCC came to YOUR door to look at your unlicensed CB station and you refused them entry.. the fact that you're a ham gives you a bit more to lose.

I suppose I could put my callsign here, but Naaaaahhhh..... you first! (besides... what difference would it make? Bein' an Extra don't necessarily make you a genius any more than bein' a Cb'r makes you stupid.) Suffice it to say, yeah, I'm a ham, yeah I'm a CB'r, and yep, I'm also Commercially licensed (several actually)... BIG DEAL!

2991. Big Alternators.

Newsgroup: rec.radio.cb
Date: 2000-01-19 00:00:00 UTC
From: phil <phil@invest.fsbusiness.co.uk>
Message-ID: <AtGepIAuuYh4EwSw@invest.fsbusiness.co.uk>
Source record: 20840

Toll,

I knew you'd read the title.

I finally cracked the 'illusive' Mitsubishi alternator saga.

Here it is from the horse's mouth:

Alternator in question used a proprietary mount and pulley for Ford. (I know you knew this) Used from about 1994 1/2-1997 or 98. 12 Volts 210 Amps, brushless design with a two wire plug-in to the Ford harness. Retail for just over $1000 US dollars rebuilt.

Incredibly difficult to get parts for. In my opinion, I would stay away from this unit and install a Leece-Neville, perhaps something in the 4800 series.

Hope this helps.

Scott Fureman

For those who may be newbies to the group, let us introduce you to the lunar theory of trolling. Simply put, it says that every 28 to 30 days, somebody pops in here with a wildly inflamatory post designed to gather as many responses as possible. The troll is successful if his post begins a long thread of in-fighting among participants. The troll generally posts only once and then sits back and laughs as he reads the responses.

Why every 28 to 30 days? Some say it has to do with the full moon. Others have pointed out another 28 day cycle in nature (use your imagination--or ask your girlfriend).

We generally say it's best to ignore these posters. But I have to confess in this case I got a good laugh from the person who, after the long, crude post, simply said, "Okay."

>> when the only goal is to be able to contact
>> someone if my car breaks down? I'm tired of
>> paying a high monthly fee for a phone that
>> should only be used in emergencies.

If you discontinue your cell phone service, the phone still can be used for calling 911 almost anywhere in the USA. Check with your local cellular provider for confirmation.

But remember to keep the phone battery charged! Yes, you can use the cigarette lighter adapter--unless your highway emergency is a dead automobile battery. And that's a real possibility. Many brands (such as Interstate) appear to be maintenance free, but actually require the addition of water once or twice a year. If the liquid level drops, the plates short. This kills the engine and renders a built-in cell phone useless.

My stepdaughter keeps one of my old analog phones in her car in a small Totes bag which also contains one spare battery. About every 60 days, I swap the batteries with ones that are freshly charged. If you follow this plan, write the battery swap date on your calendar. Two months goes by faster than you think.

Best regards,
QRM

Message-ID: <388511d8.8182991@news.thegrid.net>
Source record: 20849

If you paid $525.00 you got RIPPED OFF!!!! My shop gets them directly from the mfgr. and they sell for $389.99 Brand New with warranty. Not refurbished either!!! However for the Saturn Turbo, Sells at $529.99.

Now I will ask you this, Out of all the Saturns built and sold at these prices, you are saying that the 100 plus a yr we sell and the other hundreds of companies that sell even more are selling refurbished equipment as new? That would mean that every single saturn made even yours is refurbished! Also note that a company will not sell an Item as new when it is refurbished or they would be in court for FRAUD!

Randy.

Justin,

I just asked my supplier about those radio's the other day. They told me that cobra stopped making them. They were a very big bust at my shop. Could get one out of three to work. I sent two back and the third one hasn't come back. That was two years ago.

If you can find a working 2000 go for it. Keep in mind that there are no parts available for this radio as far as meters and support.

Washington bases are still made and a good mobile on a power supply will work great too.

Bogus argument, and one easily debunked. The reason you study about
white people is because of the historical significance of their
accomplishments. The reason you study blacks for "black history"
month, is because of the particular race of people.

>How much drive will a2SC2879 take at 14.5 volts dc?

My estimation is 4w carrier and 50w pep per transistor

>What is the 2SD1446 watts output, I can't find it in my ECG replacmen
>guide?

With an input of 2w carrier and 25w pep a pair of 1446's will have around 80w carrier and 275 pep. these are low drive transistors like the 455, but respond to minimal drive with more output than the 455, close to the output of a 2290, just less drive required to get it. each single transistor I'd estimate a max input of 1w carrier and 20w pep.

I guess most "frugal" hams are just too concerned with having enough money to feed and clothe their families, pay the mortgage, and all the other bills. In many cases, there just isn't enough "disposable income" to spend on new radio "stuff". Besides, like you said, many hams are more than capable of making and repairing their own stuff, and prefer to pick up a good "deal' at a hamfest and coaxing it back to life. At least, for me, that is alot of the fun, getting an old, dead rig and making it like new again. And why would you spend top dollar for accessories like pre-packaged coax jumpers, when you can make your own at a fraction of the cost? If you like wasting your money, that's fine, but I'm brutally aware of just how much I have (or don't have), and tend to make it stretch as far as I can.

You might be a CBer if.....

Your children all walk barefoot so that you can buy the latest "belchfire 500" amplifier and matching echo mike........

> entire white ass.

You are as racist and as bad as the white people that you claim to
detest so vehemently. It's all there, stereotyping, generallizing, you
name it. It works both ways. You are no better than the white people
that lock their car doors when passing through a black neighborhood, or
walk to the other side of the street if they see a group of blacks up
ahead.

Until you can distinguish an individual act or personality trait from
the actions of a racial group, you will be forever caught in a racist
loop. Your racist actions will casue white people to retaliate with
their racism, and the cycle will never end.

You want to end racism? You have to be willing to meet in the
middle.....

I cannot say that I have. Copper has always been nice to me. No problems with personnel on the phone, on E mail, on line orders or through the catalog. Maybe some others have had problems.

If so, they need to call the customer service department and complain.

Thanks, this has helped a lot.
Truth to tell, at the end just before I got out cb years ago, I just put the swr meter in line to get it close and then used a field strength meter to get the highest output and called it good.

The accepted convention for plurality of initials is now to leave the
apostrophe off, so you would have the following:

CDs
IDs

It is probably defined in any secretarial handbook...

Kim W5TIT

There are also examples of banal arguments and I think this is one of them.

The Blonde and the Cute Sheep

Once upon a time, a blonde became so sick of hearing blonde
jokes that she had her hair cut and dyed brown. A few days later,
as she was out driving around the countryside, she stopped her car
to let a flock of sheep pass.
Admiring the cute wooly creatures, she said to the shepherd,
"If I can guess how many sheep you have, can I take one?"
The shepherd, always the gentleman, said, "Sure!"
The blonde thought for a moment and, for no discernible reason, said, "352."
This being the correct number, the shepherd was, understandably,
totally amazed, and exclaimed, "You're right! O.K., I'll keep to my end of
the deal.
Take your pick of my flock."
The blonde carefully considered the entire flock and finally picked the one
that was by far cuter and more playful than any of the others.
When she was done, the shepherd turned to her and said,
"O.K., now I have a proposition for you. If I can guess your true hair
color, can I have my dog back?"

A blind guy on a bar stool shouts to the bartender
"Wanna hear a blonde joke?"

In a hushed voice, the guy next to him says,
"Before you tell that joke, you should know something.
Our bartender is blond, the
bouncer is blond. I'm a 6' tall, 200 lb black belt.

The guy sitting next to me is 6'2,weighs 225 and he's a rugby
player.

The fella to your right is 6'5" pushing 300 and he's a wrestler.

Each one of US is blond.

Think about it, Mister. You still wanna tell that joke?"

The blind guy says,

"Nah, not if I'm gonna have to explain it five times."

Golden Arches
A guy gets worried about his age and decides to get plastic surgeryto look younger. He spends $5,000 and feels really good about the result.On his way home he stops at a newstand and buys a paper. before leaving he saysto the sales clerk,"I hope you don't mind me asking, but how old do youthink Iam?"
- "About 35," was the reply.
- "I'm actually 47!" the man says, feeling really happy.
After that he goes into McDonalds for lunch, and asks the ordertaker the same question, to which the reply is, "Oh you look about 29."
- "I am actually 47!" This makes him feel really good.
While standing at the bus stop he asks an old woman the samequestion.
She replies, "I am 85 years old and my eyesight is going. But when I was young there was a sure way of telling a man's age. If I put my hand downyour pants and play with your balls and penis for ten minutes I will be ableto tell your age."
As there was no one around, the man thought what the hell and lether slip her hand down his pants. Ten minutes later the old lady says, "Ok,it's done. You are 47."
Stunned the man says, "That was Brilliant! How did you do that?"
The old lady replies, "I was behind you in McDonalds."

The trouble with the cable connection is that they are always working on it trying to keep up with the demand. Consequently, the connection is not very reliable--and that would really suck if it was my only internet connection.
There are very few on my node as I live in a downtown area that doesn't have all that many residences, and so when the connection is working it is FAST!

I don't want to ruffle too many feathers, (here it comes) after I got out of
the
Army--many years ago--a guy told me "vulgar language shows lack of
intelligence
and by that I mean that you could not think of anything else to say."
He sure hit nerve, and to this day I try and use what brain cells I have
left to make
my point without using vulgar terms.

That's really nice, C.H., really nice. Did this guy also tell you, years ago, that being an informed commenter would also lend credence to your intelligence? I have just said, in an intelligent way, the same thing I could have said thusly: You are an idiot for not knowing what it is you are commenting on.

The *way* I said it makes no reflection on how intelligent I am, probably more how *emotional* I am about what I am saying.

By the way...the topic here WAS that Aaron thinks my callsign, W5TIT, is vulgar. So, you see? I don't think there was ever even any vulgar language in this thread... Maybe, for once, Aaron will even agree with me on that one....probably not....

Kim W5TIT

Actually, _Convoy_ was written and performed by CW McCall,
not Jerry Reed. (Jerry just played a truck driver in the Burt Reynolds
movie based, loosely, on that song.)

Yep, it is all the fault of that old devil CW.

He might not want to deal with you if you won't provide him with either a reference and or a tax ID number. Keep in mind that he IS wholesale or close to it. Charlie and I have been doing business for years and he has always treated me well. Just don't catch him on one of his low blood sugar days.....he CAN get a little edgy ! !

like new Galaxy Saturn base radio
6 bands,variable power,roger beep,echo,+khz switch
frequency counter,fine/coarse clarifier
tone control,swr meter
In addition a speech processor and channel guard bleed over filter were
installed,also the power supply was beefed up to support the 50W output.

I have the original box and mic.
$375 plus shipping

And, lets not forget that slavery was not banned throughout Africa until the middle of the 1900's - a hundred years after slavery was banned in the United States.

African-Americans are not the sweet, innocent, victims that they present themselves to be. Like some white Americans, their ancestors probably held slaves in Africa (most Africans did). Because of war, or some other circumstance, their ancestors eventually became slaves and were sold to slave traders.

On the other hand, most whites in this country do not have ancestors who owned slaves. In the height of the slave period in this country, less than ten percent of Americans owned slaves.

Another important point to make is that many, if not most, African-Americans today are not decendents of white-owned slaves. The majority of African-Americans living in the United States today entered this country long after slavery was banned. Makes you wonder why these people deserve special treatment, when no other group ever received that level of help from the government (certainly no Europeans ever did).

I realise that some people are not going to like the above. But, those are the facts - look them up for yourself.

Dwight Stewart

Like many others using this newsgroup, I enjoy helping new comers where and when I can. Children and young individuals as well as women and peoples of all faiths and races use this as a means to send information to one another. Slang, bigot remarks, racist innuendoes and abusive language do not belong on the group. No only does it offend others, it causes distrust and loss of customers to the web site. Such actions are also a violation of State and Federal statutes. The freedom of speech clause does not apply here. This type of behavior is not free speech but abuse of free speech.

3067. restructuring FAQ

Newsgroup: rec.radio.cb
Date: 2000-01-19 00:00:00 UTC
From: AB7RS <tglenn@imt.net>
Message-ID: <38866E79.53A@imt.net>
Source record: 20916

I know this is a CB group but this should answer a lot of questions
being asked here.

Generalï¿½Info ï¿½ï¿½FCCï¿½Reportï¿½&ï¿½Orderï¿½(PDF)
ï¿½ï¿½Aï¿½Summaryï¿½ofï¿½Restructuringï¿½Upgradeï¿½Possibilities

1. Will anyone lose any Amateur Radio operating
privileges after April 15, 2000?

No! All current license classes and privileges
will remain the same, and all licensees will be able to renew their
licenses indefinitely.
(The sole exception is for those who obtained a
Technician license or exam credit prior to March 21, 1987--see question
4, below.)
The primary difference is that the FCC will stop
issuing new Novice and Advanced class licenses after April 15, 2000.
Beyond that,
current Technician and Technician Plus licensees
will be lumped into a single Technician licensee FCC database. When
renewed,
current Technician Plus licenses will be stamped
simply "Technician." Technicians who have passed Element 1, the 5 WPM
Morse
code examination, will enjoy current Tech Plus HF
privileges, but the burden of proof of having passed Element 1 (5 WPM or
any
higher Morse code element) will be on the
licensee. The current "no-code" Technician license will continue to be
available after the
new rules go into effect, however. It will
continue to offer the present VHF/UHF privileges.

2. I currently hold a Tech Plus license. Can I
take the current General class written examination (Element
3B) right now, then apply for an upgrade to
General after April 15, 2000? I'm a little confused on this
point.

Yes. The FCC has told the League that current Tech
Plus licensees holding a Certificate of Successful Completion of
Examination
(CSCE) for Element 3B on April 15, 2000, may apply
for a General class upgrade. The present Element 3B examination has 30
questions; the new Element 3 test will have 35, so
the advantage to test before April 15, 2000, is slight. CSCE holders

must attend a
Volunteer Examiner session, complete Form 605,
attach a valid CSCE, and pay the required application fee ($6.65 for the
ARRL-VEC), if the VEC you use charges a fee. To be
valid on April 15, 2000, your CSCE will have to be dated on or after
April
17, 1999. A CSCE is only good for 365 days. (See
also A Summary of Restructuring Upgrade Possibilities.)

3. I hold an Advanced class license. Can I take
the current Amateur Extra class written examination
(Element 4B) right now, then apply for an upgrade
to Extra after April 15, 2000?

Yes. The FCC has told the League that current
Advanced licensees holding a CSCE for Element 4B on April 15, 2000, may
apply
for an Amateur Extra class upgrade. See question
2, above. The advantage here is that the current Advanced licensee will
face a
slightly shorter 40-question examination under the
current licensing regime to get a CSCE for the current Element 4B. The
new
Extra class Element 4 will contain 50 questions
(and is expected to contain many of the present Advanced class question
pool
technical questions). To be valid on April 15,
2000, your CSCE will have to be dated on or after April 17, 1999. A CSCE
is only
good for 365 days. (See also A Summary of
Restructuring Upgrade Possibilities.)

4. I got my Technician license under the old
system prior to March 21, 1987, and I now hold a Tech Plus
license as a result. I understand that I'm now
eligible to upgrade to General without having to take an
additional examination. Is this correct?

Yes. Holders of a pre-March 21, 1987, Technician
class license (or a CSCE) may claim credit for a new General class
license after
April 15, 2000. This is because under the old
system, the written examination for Technician and General class was
identical; the
only difference was that Technicians had to pass a
5 WPM Morse code test, while Generals had to pass a 13 WPM Morse code
test.
The upgrade is not automatic, however. You will
have to apply through a Volunteer Examiner test session, complete Form
605,
attach documentary proof of having completed the

requirements for a Technician license prior to March 21, 1987, and pay an
application fee, if any, to the VEC involved.

5. What do I need for "documentary proof" of
having held my Technician license before March 21, 1987?

Obviously, if you have an original or a copy of
your Technician license issued anytime prior to March 21, 1987, that would suffice.
Other documentary evidence could include an
original CSCE for Element 3 issued prior to that date; an FCC verification letter of
having held a Technician license prior to March
21, 1987; a document from the FCC's contractor, ITS Inc; or possibly a Callbook
listing dated prior to March 21, 1987, indicating
your license class as Technician.

6. I've lost my old license and didn't keep any
copies. How do I get verification from the FCC that I held a
Technician license prior to March 21, 1987?

You can write the FCC, Wireless Telecommunications
Bureau, 1270 Fairfield Rd, Gettysburg, PA 17325. Provide the FCC with your name, address, and current call sign as well
as all details of your licensing. The FCC may be able to verify in writing that you
held a Technician license prior to March 21, 1987.
You also may contact ITS Inc (visit http://www.itsdocs.com/). For a fee, ITS
will research prior licensing records and should
be able to provide you with the necessary documentary proof.

7. I've got an Advanced ticket now. Someone told
me that I'll revert to General on April 15, 2000. Is this
true?

Absolutely not, although this rumor has been
making the rounds on the Internet and on-air discussion groups. You will continue to
be an Advanced class licensee and have Advanced
class privileges after April 15. Again, no one loses any privileges, and all license
classes stay the same.

8. How can I find out where there's a Volunteer
Examiner session so I can apply for an upgrade or take an
examination element?

A session search engine is available on ARRLWeb at
http://www.arrl.org/arrlvec/examsearch.phtml. Also, feel free to contact local

VEs or ask local clubs for information on testing sessions in your area.

9. I now hold a General class ticket. Since there won't be any more Advanced tickets issued after April 15, 2000, can't I just take the current Amateur Extra written examination (Element 4B) and use the CSCE to get my Amateur Extra when the new rules become effective?

Nice try, but, the answer is no. If you're going to take your examination before April 15, 2000, you must complete both Element 4A (instant upgrade to Advanced) and Element 4B, then take your CSCE for Element 4B to a VE session on or after April 15 to apply for your Amateur Extra ticket (this means filling out Form 605 and paying the application fee, if any, to the VEC). And yes, in this example, it means you would need to appear at two test sessions. You also could just wait until April 15 and take the single 50-question Extra class written test. (See also A Summary of Restructuring Upgrade Possibilities.)

10. I've got my Advanced now and want to take Element 4B before April 15, 2000. What license manual should I study?

The new question pool has not been developed yet for the post-April 15, 2000, tests. Use the current Extra Class License Manual, available from the ARRL. New study guides will be developed to reflect the new testing regime. Likewise, those wanting to take Element 3B to upgrade from Tech Plus to General should study the current General Class License Manual, available from the ARRL.

11. Can I use my valid Element 4B credit CSCE for the Extra written examination element to upgrade before April 15, 2000?

Only if you also pass the 20 WPM Morse code examination. Otherwise, you'll have to apply after April 15, 2000, when the new rules become effective. Remember, your Element 4B CSCE must be dated on or after April 17, 1999, in order to be valid on April 15, 2000. A CSCE is only valid for 365 days. (See also A Summary of Restructuring Upgrade Possibilities.)

12. I'd heard that Novices and Tech Pluses would
be getting an automatic upgrade to General when the new
rules go into effect. Is this true?

Unfortunately, no. In its comments to the FCC, the
ARRL had proposed that the FCC upgrade all holders of Novice and Tech
Plus
licenses to General class as a one-time action to
permit "refarming" current Novice/Tech Plus HF subbands for higher-class
licensees. The FCC did not adopt this
recommendation in its Report and Order of December 30, 1999, however.

A Summary of Restructuring Upgrade Possibilities

We emphasize that no one will lose any current
Amateur Radio privileges as a result of the FCC's "restructuring" order
of
December 30, 1999. There is no need to upgrade
if you are happy with your current privileges, and no one's license
class will
be "downgraded" if that individual chooses not
to upgrade now or later. Also note that there are no automatic upgrades.
All who claim prior test element credit (eg,
with a Certificate of Successful Completion of Examination or CSCE) must
present
their credit(s) to a VE team at an exam session
and pay the appropriate processing/application fee, if required.

Below is a summary of some of the upgrading
possibilities afforded by the FCC's Report and Order of December 30,
1999.

Upgrading to Amateur Extra Class Without 13 or
20 WPM Morse Code Testing

Advanced: With no further code testing, to be
ready to upgrade to Extra on/after April 15, you must pass Element 4B
now
and present your Element 4B credit to a VE team
on/after April 15. Or, take Element 4 on/after April 15.

General: With no further code testing, to be
ready to upgrade to Extra on/after April 15 you must pass Elements 4A
and 4B
now, thus getting your Advanced upgrade before
April 15. Then, take your Advanced upgrade and your Element 4B credit to
a
VE session on/after April 15. You also can take
both Element 4A and 4B credit to a VE session on/after April 15. You
also may
pass Element 4 after April 15 (Element 4A cannot
be bypassed; if Element 4B is not passed in this scenario before April
15,

on/after April 15 the Element 4A credit
previously earned would have no value toward any future upgrade under
the new
system).

Technician Plus or Technician with 5 WPM or
higher Morse code credit: To be ready to upgrade to Extra
on/after April 15 with no further code testing
you must pass Elements 3B, 4A and 4B before April 15, then take this
credit to a
VE session on/after April 15. Or, you must pass
Elements 3 and 4 on/after April 15. (Technicians able to document
passing the
Technician/General written examination before
March 21, 1987, can present this proof as credit for Element 3B before
April
15, or as credit for Element 3 on/after April
15).

Technician (no Morse code credit): To be ready
to upgrade to Extra on/after April 15 you must pass Element 1A, the 5
WPM Morse code test, and you must pass Elements
3B, 4A and 4B before April 15, then take this credit to a VE session
on/after April 15. Or, you must pass Elements 1
(the 5 WPM Morse code test), 3 and 4 on/after April 15, to qualify under
the
new system.

Novice: To be ready to upgrade to Extra on/after
April 15, you must pass Elements 3A, 3B, 4A and 4B before April 15, then
take this credit to a VE session on/after April
15. Or, you must pass Elements 2, 3 and 4 on/after April 15.

Other Upgrade Examples

Technician Plus or Technician with 5 WPM or
higher Morse code credit desiring to upgrade to General:
With no further code testing, you must pass
Element 3B before April 15, then take this credit to a VE session
on/after April 15.
Or, you must pass Elements 3 on/after April 15.
Grandfather credit is also acceptable, per above.

Technician desiring to gain Novice/Tech HF
privileges: You may pass the 5 WPM code test at any time, before or
after April 15, 2000.

Novice desiring to upgrade to General: You must
pass Elements 3A and 3B before April 15, then take this credit to a
VE session on/after April 15. Or, you must pass
Elements 2 and 3 on/after April 15.

Novice desiring to upgrade to Technician with HF
privileges: You must pass Element 3A before April 15, or pass
Element 2 on/after April 15.

3068. FS-Pyramid Power Supply

Newsgroup: rec.radio.cb

FS-Pyramid Power Supply Gold Series model number PS-26k. In Very Good condition. I used it to power my galaxy77 mobile as a base station when I was heavy into cb radios. I have since gotten out of the hobby and forgotten it was in storage. Its output range is 6-15 volts DC, it has volt and amp meter with green backlights,has overload protection,overvoltage protection,overload precaution devices, thermal protection, and is good up to 25 amps. It operates on 115 volts AC. I am asking $65.00 and buyer PAYS and chooses delivery method. Money order preferred but I will accept a personal check but I will have to wait for the check to clear before I ship. If interested my email is doc_holiday03@hotmail.com.

Lestek, Powerline,Vital(Stinger) and a few others are made right here in my hometown, These alternators are all about the same, all the guys at each place have worked together at one time or another. From listening to the guys that do this for a living and watching each alternator on a bench I believe that in some cases these brands mentioned are better, I know they will generally hold the volts a little better at higher current, But the leeces distribute the heat better, just dont over load them for hours at a time like an ambulance or fire truck would.
If this was not true you would see more of these for sale as "pulls". Most of these alternators use either a large Ford case or a large Leece case. They usually go inside, beef up the stator and rotor wire and most importantly, they add more and beefier diodes, There is nothing wrong with the leece's I really like the case on the large case, I just dont like the onboard diodes that Leece use's. If used with external diode bank then these babys are as good as they come, But keep in mind that they have one of the heaviest rotors out there and if you try turning two of these while traveling down the road you will see a huge decrease in gas mileage. I believe if you "overbuild" your own diode bridge for these it really works well.

The biggest Lestek I have seen was a 250A warm case.

About a thousand dollars (maybe more, today) for it.

Similiar to the Powerline technology.

If you have Leece-Neville, no need to spend the money on a Lestek...

However, Lestek does make some nice alternators that will do big amps in
stock cases for people with toyotas and nissans, etc.

They are primarily designed for car audio... Meaning, short duration, high
current bursts... I have not seen one burn up on 11 meters, though.

This post is to ask for responses to an earlier question. Previously I asked for opinions on whether the Cobra Soundtracker radios are actually as bad as some have said. I only got one response. I am in the market to buy, and need advice to decide between a 29LTD and a Uniden. It seems I've heard only positive remarks about the Unidens. Thanks for your help.

Hope to have a (good) radio soon to actually talk to some of you! Goodbye Radio Shack cheapo!

Mickey

Greetings!

Just a note to let you know, that when a radio has been peaked, and
you have an AWI ir other type of antenna warning light, the higher
power the radio does put out, can cause the detector to light up.

It may be nothing serious, just check the SWR when this occurs, if
it's below 1:1.7 - and the AWI comes on, don't worry. This is normal.

The detector on the AWI circuit is doing it's job, but extra power
makes the AWI come on more often for a lower SWR - simply because the
detector is set for a given range of power. A simple resistor change
that the tech can do, will take care of the problem.

3080. Re: Accurate SWR meter

Newsgroup: rec.radio.cb
Date: 2000-01-20 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <38864900.266478491@news.iserv.net>
Source record: 20929

Greetings!

Remember = IMHO

I look for a good quality unit not necessarily by size, but by known references.

A good SWR meter, when tested against an unknown brand, both should show the same SWR - best results are obtained in determining this with an antenna that offers an SWR between 1:1.7 to 1:1.5.

Some meters of the same brand, do vary, but little in regards to tolerance.

Now, the true test would be able to take it apart and view the "innards".

A good SWR meter shows short, direct runs from the antenna and transmitter terminals right to the detector.

Some meters used a foil trace snaked thru two "islands" of components with the foil traces acting like the RF detector antenna.

While others use a series of rods with plastic non-conductive spacers along the length to keep the rods at a consistent distance for the length of the run the center lead rod passes thru between the antenna and transmitter coax connections.

Both techniques work, and work well - but offer limitations of inherent bandwidth and ability to be sensitive enough to detect currents that can fall below the diode detectors own inherent voltage drop.

Poor SWR meter designs - don't use an RF bypass cap to keep RF out of the jeweled meter movement - which can introduce an error in the display, usually to your favor by not properly shielding the meter itself from stray RF currents, and wreaks havoc with the meter movement, showing a higher SWR than it should be.

As the antenna is tuned for a lower SWR, these stray currents lessen their effect on the meter movement and the accuracy becomes better.

Pretty much all the SWR meters for CB radios fall into the above catagories.

What to look for?

All metal casings. And the use of screws versus rivets. This helps confine RF current to the meter and touching the meter by your hand

should not change the reflection readings.

Plastic casings offer little to no shielding. Not
a good idea if you use power. What may be a good reading
at a low power level may not always work to the best on
higher levels.

I've seen and have, plastic cased SWR meters that if you
place your finger on the jeweled meter face or the knob
you change the SWR reading.

Screws versus rivets, due to the rivets used can loosen over the life
on the unit. Also drilled holes for rivets can enlongate and ruin the
connection of the case clamshells, increasing the ability of the case
to interact with your body, and increase the error of the SWR reading.

Screws can be tightened and or replaced if necessary.
Rivets corrode and can shorten the life of the meter,
they can become flimsy or offer poor connections.

Mounting of the SO-239 connectors, should be bolted [preferred] or
screwed using a flange type of surface mounting. Simple "pass thru"
type SO-239 connectors can loosen and need to be re-tightened on a
regular basis.

If you own a "Pass-thru" SO-239 type of meter, the outer
lockring and nut can loosen, or worse - move. Which can
increase the error, make a poor shield connection, or
in a worse case scenario, can break internal connections
and you have a useless meter.

Switches, should have a solid feel. Although a slide switch works in a
pinch, I know of SWR meters that use a grommet over the switch to keep
out dust and dirt and increase reliability.

To keep accuracy, store the SWR meter in its box or a re-sealable
plastic bag to keep moisture and dirt from ruining the contacts.

Look for ease of use, ability to keep the SO-239 contacts clean. The
use of chrome plated connectors are better than zinc steel
combinations at keeping good contact and easier to keep clean.

I told you the above, on what to look for. Any small metal cased meter
will offer better accuracy and less likely to introduce an error in
the way it's built.

Antenna connectors arranged in Axial, Side or Rear mounting, use what
feels comfortable to you.

Aries, PDC, Diesel, Radio Shack - offer good analog meter movements at
a pretty good price. There are many more, but I find that any
SWR-meter meeting the above criteria work well.

Electonic types are also good, but have problems with "sampling" the
signal properly - the method used is similar to polling, sense then
detect. The switching time delay may give you a false reading. Which
is why I prefer analog versus digital in this realm of RF - at least
analog meters are damped and offer instantaneous results.

Hope this helps.

Greetings!

I'd be more concerned about the pulleys' own dog clutches on the crankshaft - this can get expensive real quick. Replacing a crankshaft due to worn dog clutch in the harmonic balancer and crankshaft notch can get expensive. Excessive or sudden loads with a loose belt can ruin it quick. Excessive freeplay, or clanking when the alternator bears more of a load on the vehcile? Take it in to see if the harmonic balancer is loose or out of round.

I'd look into ways of possilbly adding an extra alternator to help reduce the load left to one. This way you're not tearing up a belt on the pulley just to turn an alternator.

Also, check the alignment of the alternator housing and the pulley, make sure they are in plumb or parallel to each other as they rotate on their respective axis. A slightly skewed [off axis] alternator and/or a wobbly harmonic balancer can tear up a belt in a hurry.

Got an oil leak in the front seal? This can get on the belt and pulley and wham - slip and friction and a broken belt. Even diesel fuel can contaminate the belt real quick.

Uh huh. Kind of like when David Duke formed the National Association for the Advancement of White People. That's just horribly racist, of course. But "Black Power" marches where the participants are openly encouraged to "Make Whitey Pay!" are accepted and encouraged.

Well put Silver Eagle!

This is also the reason I no longer keep my CB on when traveling. My daughter is only 11 and there have been time I have had to turn the radio off or key it up to keep her from hearing some pretty foul language on the air.

I know there are those who will say "so what... don't like what you hear, don't listen." Remember, you have mothers, wives and daughters too. Think of them before you speak.... or as in the case here, write.

Silvereagle wrote:

You know I really do know what the limits are. I have a little FRS pair which works great if your in line of sight(4 or 5 miles). I would like something better than that. What are the limits of hand helds? I saw one post that asked how long an antennae I could tolerate. I guess I am an entry level user that needs to learn about what's out there. Do you have any suggestions? How do I get the FAQ? 73's partner, Richard

I have a 148 and have modified it for a suppressed AM modulation, I run a D104-M6SE, and I get
complimented quite often on how it sounds. I run it 5 watts with a p.e.p. of 10 watts. I run the
Microphone an 1/8th of a turn up. Problem is that alot of people like to run these and most other
radios full bore. Thats why they sound bad, and cause so much adjacent channel interference.

The 100 amp rating is fine for what I have(100 amp fuse used), it's just that the pulley and fan will strip loose and spin separate from the shaft. It's almost as if the nut didn't hold the pulley tight enough. I may look into a way of keeping that nut tight. Anyone know of a shop here in Houston that could fix this?

Has this happened to anyone else using a GM CS-130 or similar alternator? I find it hard to believe my truck is unique, but will check tomorrow to see if something is out of alignment.

BTW. The noise that this makes while driving down the highway is horrific and can't be described. I was close to home when it happened both times, the looks I got while driving through my neighborhood were quite amusing. The high-pitched squeal/grind noise makes dogs howel.

If you do find that your SWR is "OK" but the Indicator light still lights up, you can open up the radio, find "VR-6" and adjust that til the light goes off. You'll have to do this in the car so that you can have the antenna plugged in or otherwise the "AWI" won't be set to warn you of a SWR that's become worse than what you have. But like others have said, check the SWR first. If it's ok, then adjust vr6. If it's not, then you'll have to find the cause. Other people have posted ideas as to what the problem could be. The main thing is this, if you do find a problem, there usually pretty simple to fix. If it turns out the problem is a bad antenna, do yourself a favor and spend a little extra and buy a good quality antenna. You got a peaked up radio so don't choke it by using a cheap antenna.

Geez Tim, lighten up. He's probably refering to the physical condition when he says "like new"... obviously if it's been "modded and tuned up", it's not in the same condition as when it was new. You've gotta admit you were just trying to stir up some people here.

Andy, 2LD751

Hi

This will probably never get to the person who does this on channel 19 in Denver.
Someone for the last 3 nights just plays the tv or radio over the cb for hours. Sunday we got treated to Andy Griffith ::(I leave work and I turn on the cb and sometimes I just turn it back off.

In the half week I have been back out there I learned two things:

CB hasn't changed much....
My cb friends are still out there!

Anna

Try www.bills2way.com excellent prices, service, and selection. As far as the watt meter, I was swayed from a Dosy and towards the Cherokee TM-3000 by list members and others. So that's what I got. I like it, easy to use, heavy construction, it's illuminated, and comes with a bracket for mobile installations.

Just to cut through the crud and acually answer the question:

As a ham all you do is throw out your call. "Break" is usually reserved just to break into a ongoing conversation for an emergency. If you wanted to join the conversation ,then simply throw in your call. There might be a few people say different , as I am sure there will be in this newsgroup. But I can gaurentee you that if you use this procedure, you won't have any one correcting you or giving you a sermon on proper procedure while talking on the radio.

Hope this helps , Woody

And my post just weeded out the "true" trouble makers. What goes around comes around. How well I planned huh?

Why make trouble? Is your initial post going to bring peace or make things better....? Probably not, it will only make you in some cases (as those see it) a "N" lover, etc, etc. Remember, the past is the past. Build a better future with good words, not bad. NO ONE, no matter what the topic likes being called names...

Source record: 20975

I'm looking for a small, plain, mobile mount CB for traveling. Radio Shack has one on sale for $39.00. Is it any good? Any others that would be better? I don't need anything fancy but I do want one of the smaller units so it matches the size of my 2-meter and scanner.

Also, are there any decent NMO mount antennas that are 2 feet or less for mounting on top of the Suburban?

Thanks for any opinions or ideas.

Hutch

Proper protocol for breaking in on an emergency is "Break Break." The only reason I bring this up is that it is a "prosign" and has proper usage. We have this debate around here because people who are unaware of the "debate" here will invariably key up on the "RACES" repeater and say "break" to get into a conversation. They are always immediately reprimanded by people who don't understand what the heck they are talking about and tell them they were wrong to say "break" because it means an emergency. Break is a request or signal that you wish to join (or even interrupt) a conversation. You could also achieve the same goal by just giving your callsign.

Smiley glossary

8-) Uses Glasses

o c 8 Nerd

(c: Iï¿½m pretty

=o) Hi!

:-o Wow!

:-c Real unhappy

:-| Grim

:-C Just totally unbelieving

:= | Baboon

:-B Drooling

:-v Speaking

:-, Smirk

:-V Shout

:-|| Anger

:-w Speak with forked tongue

:-) Smiling

:-r Sticking tongue out

:-(Frowning

:-* Oops!

'-) Win

:-T Keeping a straight face

;-) Sardonic Incredulity

:-D Said with a smile

%- Drunk with laughter

:-x Kiss kiss

:-" Pursing lips

:-[Pouting

:-# My lips are sealed

:-X A big wet kiss!

:-P Tongue hanging out in anticipation

:-Y A quiet aside

8-| Eyes wide with surprise

>-< Absolutely livid!!

&-/ Tearful

|-{ Good Grief!" (Charlie Brown?)

:-} Thish wine tashted pretty good"

8-] wow, maaan"

8-O Omigod!!" (done after "rm -rf *" ?)

:-, Hmmmm."

|~(Someone just busted my nose".

:^D Great! I like it!"

B-D Serves you right, dummy!!"

:-) Your basic smiley. This smilie is used to inflect a
sarcastic or joking
statement since we can't hear voice
inflection over Unix.

;-) Winky smiley. User just made a flirtatious and/or
sarcastic remark.
More of a "don't hit me for what I just
said" smiley.

:-(Frowning smiley. User did not like that last
statement or is upset or
depressed about something.

:-I Indifferent smiley. Better than a Frowning smilie
but not quite as good
as a happy smiley

:-> User just made a really biting sarcastic remark.
Worse than a :-).

>:-> User just made a really devilish remark.

>;-> Winky and devil combined. A very lewd remark was
just made.

Those are the basic ones...Here are some somewhat less
common ones:

(-: User is left handed

%-) User has been staring at a green screen for 15
hours straight.

:*) User is drunk

[:] User is a robot

8-) User is wearing sunglasses

B:-) Sunglasses on head

::-) User wears normal glasses

B-) User wears horn-rimmed glasses

8:-) User is a little girl

:-)-8 User is a Big girl (-_-) Tired

:-{) User has a mustache

:-{} User wears lipstick

{:-) User wears a toupee

}:-(Toupee in an updraft

:-[User is a Vampire

:-E Bucktoothed vampire

:-F Bucktoothed vampire with one tooth missing

:-7 User just made a wry statement

:-* User just ate something sour

;-(User is crying

;-) User is so happy, s/he is crying

:-@ User is screaming

:-# User wears braces

:^) User has a broken nose v :<) User is from an Ivy League School

:-& User is tongue tied.

+-:-) User is the Pope or holds some other religious office

`:-) User shaved one of his eyebrows off this morning

,:-) Same thing...other side

|-I User is asleep

|-O User is yawning/snoring

:-Q User is a smoker

:-? User smokes a pipe

O-) Megaton Man On Patrol! (or else, user is a scuba diver)

O :-) User is an angel (at heart, at least)

:-P Nyahhhh!

:-S User just made an incoherent statement

:-D User is laughing (at you!)

:-X User's lips are sealed

:-C User is really bummed

<|-) User is Chinese

<|-(User is Chinese and doesn't like these kind of jokes

:-/ User is skeptical

C=:-) User is a chef

@= User is pro-nuclear war

*<:-) User is wearing a Santa Claus Hat

:-o Uh oh!

(8-o It's Mr. Bill!

*:o) And Bozo the Clown!

3:] Pet smiley

3:[Mean Pet smiley

d8= Your pet beaver is wearing goggles and a hard hat.

E-:-) User is a Ham radio operator

:-9 User is licking his/her lips

%-6 User is braindead

[:-) User is wearing a walkman

(:I User is an egghead

<:-I User is a dunce

K:P User is a little kid with a propeller beenie

@:-) User is wearing a turban

:-0 No Yelling! (Quiet Lab)

:-: Mutant Smiley

The invisible smiley

.-) User only has one eye

,-) Ditto...but he's winking

X-(User just died

%\v Picasso

C=}>;*{O) Mega-Smiley... A drunk, devilish chap with a
toupee in an
updraft, a mustache, and a double chin

Note: A lot of these can be typed without noses to make
midget smileys.

:] - Gleep...a friendly midget smiley who will gladly
be your friend

:) - Happy

:> - hmm, let me think...

:D - Laughter

:I - Hmmm, not funny!

:(- Sad

:[- Real Downer

:< - what pretences!

:{ - oh boy, the headmaster!...

:O - Yelling

;(- Crying

[] - Hugs and

:* - Kisses

:-` smiley spitting out its chewing tobacco

:-1 smiley bland face

:-! "

:-$ smiley face with it's mouth wired shut

:-6 smiley after eating something sour

8-) smiley swimmer

:-* smiley after eating something bitter

:-& smiley which is tongue-tied

:-0 smiley orator

(:-(unsmiley frowning

=:-) smiley punk-rocker

=:-((real punk rockers don't smile)

+-:-) smiley priest

:-o smiley singing national anthem

:-p smiley sticking its tongue out (at you!)

That is a poor analogy. During Skip CB can ce heard all over
the world as same as here on the Internet. This is a poor
representation of your country and of the N/G. Have some
dignity and respect yourself and for others.
Cheers, John

This is not exclusive to the Internet but rather, reflective of our deteoriating American society as a whole. Did you listen to the FRS frequencies on Christmas when "the little angels" received Talkabouts and Free-Talks in their stockings? I routinely heard kids not much out of kindergarten using language that would make a sailor blush. Where are their parents when this is going on? Answer: out lobbying the politicians for more "feel-good" legislation to "protect the children."

The Cherokee is a nice looking meter. I had one that worked well until some real power was sent in it. Then it became kind of easy to peg. After checking the output of a decent 16 transistor unit for a week or so, it loosened up to the point that My Tx800 was reading 1400 peak when it showed 900 peak on my pdl 7000. Its fine for 1000 watts or so, as for an inline meter long term, it may not hold up.

W5TIT/Kim wrote in message ...
>Proper protocol for breaking in on an emergency is "Break Break." The only
>reason I bring this up is that it is a "prosign" and has proper usage.

Procedural siganls (pro-signs) do not include "Break" or "Break, Break".
Pro-signs are meant for use in CW, such as "BT" (da dit dit dit da) which
actually signals a "break in text" (very commonly used as a period by many
hams)

>We have will invariably key up on the "RACES" repeater and say "break" to
>get into aconversation. They are always immediately reprimanded by people
>who don't understand what the heck they are talking about and tell them
they
>were wrong to say "break" because it means an emergency. Break is a
>request or signal that you wish to join (or even interrupt) a conversation.
You >could also achieve the same goal by just giving your callsign.

"Break" or "Contact" is used on HF SSB in some cases to break into a QSO or
a net (again... as you said, just your call-sign will do as well)

In our area (Detroit), using "break" or "break break" on most area repeaters
would earn you the same scolding you speak of. On almost all the 2m/440
repeaters here, "break" means you need the frequency NOW. Around here, to
get into a QSO, the best way is to just toss in your callsign at the
"tail-end" of someone's transmission. I'd say listen for a while or ask in
your area as to what proper practice is... it differs considerably across
the US.

I was merely making a comment on an earlier post, not on the original post.
The question of your callsign's vugarity or lack thereof is not what I was
posting to.
I happen to think it is not, but my original post stands--

Listen, I don't have to justify, or explain why I post anything to you. I've NEVER in my entire life of 41 years EVER had to sell ANYTHING because of hardships, lack of money, or any other desperate reasons, so like I said in one of my earlier posts it's not costing me a dime to keep it ! Furthermore, It's not (per say) me being right all the time, and everybody else being wrong, it's a matter of principal, I originally put the posting up in a package deal, the radio, and a Demco Electronics Microphone Modulator, AND a new D-104 SE mic, it was posted for 475.00 TOTAL, I had more people e-mailing me crying about how expensive it was, and telling me that they could find so many other things cheaper, (im not here to get into a pissing contest) with anybody, if they dont want it then dont send me e-mails about how nuts I am, or how it's so overly priced, im not begging anybody to buy it from me, as far as the "jesus christ i can't give it away" post, it was originally posted as a humorous post that got way out of hand by a bunch of idiots that just love to instigate hate posts, and perpetual arguments, I totally regret ever trying to sell anything on this N.G. judging from the majority of responses I got, (im dealing with a bunch of A-Holes) Im totally satisfied keeping the radio, I'd probably regret selling it if it did sell, because it's NOT your average Galaxy Saturn, It has a unique power supply, (a Turbo power supply) and a unique main board in it, (a malaysia) board, so the only thing I would like to do at this point is to forget I ever posted it, and never make the same mistake again, (sell anything on this N.G.) these people don't deserve to own anything I have.....PERIOD !!! So with this being said, I hope I can put this whole issue to rest..... it's long over due. I wish I could say it's been a pleasure, but it has'nt, Frank in CT.

You wouldn't!! My old license said Tech. When I renewed last year the
new one said Tech +. I'm not sure exactly when the FCC started marking
licenses Tech +. If someone holds a Tech license issued before no-code
it would still show just Tech. The issue date should in this case clear
up as to whether or not the 5 wpm was completed. Did the FCC
immediately start marking licenses Tech + following the implementation
of the no-code Tech? If not,in this case, someone may need a CSCE to
document the 5 wpm.

I would like to start this post off with thanking those who have answered my questions in the past. Aside from a few boneheads this is a good NG.

I recently purchased a Cobra 29 LTD ST with a power mic for $40. (Great Deal!!) I have been bouncing around the net and this NG looking for what type of antenna I should buy. It seems as though the best option is to buy a 102" steel whip. I have looked around and cannot find a place online that sells these. My questions are as follows:

1. Is 102" steel whip the best antenna to get?
2. Where can I purchase a 102" steel whip?
3. Is a Radio Shack 102" Steel whip any good?
3. Where should I mount the antenna on my Ford Ranger, and what type of mount should I use?

Thank you in advance to those of you who reply to my questions.

>I believe that in some cases these brands mentioned are better, I know
>they will generally hold the volts a little better at higher current, But
>the leeces distribute the heat better, just dont over load them for hours
>at a time like an ambulance or fire truck would.
It would be an interesting exercise to put a sample of the above against several others, such as Leece, Electrodyne and especially Niehoff.

I feel there are other equally important parameters to sort out the men from the boys. Efficiency, power drain V's power out probably being one of the most important that the shooters would be interested in.

Toll has previously made a point about the quality and rise time of the diodes. Also you have brushes and brushless alternators.

Then there's Claw-Pole and Lundel rotor designs! Don't ask me to explain the difference, just that one manufacturer claims one type is 25% more efficient than the other.

I've seen this mentioned somewhere in my literature library but it alludes me at present.

I feel there are people out there that are unawares of the suggested pulley ratio's when running extra or high output alternators to get the best from their hard earned dollars and that they're either under or over driving their units.

What you say?

Phil / UK

Greetings!

Found mine to be noisier iwth the NB/ANL on, and totally agree to the channel rejection figure.

Looking at the Circuit borad design, novel feature for the RF front end, but needs not be so sensitive.

Kinda expensive for a radio that offers comparable performance for a lot less...

... like a Cobra 19+ with Turbo Echo stuffed into it...

;-)

If there are SSB users, this radio doesn't cut the mustard when it comes to receive performance - does better on AM or FM but just trying to use the NB/ANL feature, using SSB, in noisy [Read:electrical interference] environments brings in everything.

Makes a nice night light...

But just not the best for mobiles...

Greetings!

I've found SoundTrackers to be ok, not the best when it comes to performance, you really need to work another station that also has Sound Tracker to really hear a difference.

In mobiles, it's just like another radio, with a little less punch unless you're close, or have low noise levels and the other station is hitting you with at least S7 on the meter.

If you're in an area surrounded by Unidens, you really won't notice any difference while using ST.

Why pay more for it?

While Dancing with the Mouse on Wed, 19 Jan 2000 22:17:56 -0700, the Modem interrupted with an MNI from ""Skimickey" <skimickey@bewellnet.com>", and the MotherBoard buffered this to Video RAM:

It sure is easier to say "break" than
Dou-ble-U-dou-ble-U-se-ven-dou-ble-U-dou-ble-U-dou-ble-U :-)

> In our area (Detroit), using "break" or "break break" on most area repeaters
> would earn you the same scolding you speak of.

I've always used "break" over a repeater. One ham told me that, "We don't
do that", and asked how long I had been licensed. I said, "48 years, and
'we' indeed *do* do that." :-)

3168. FOR SALE: 10-METER MOBILE AMP

Newsgroup: rec.radio.cb
Date: 2000-01-20 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <20000120141759.03573.00000485@ng-cj1.aol.com>
Source record: 21017

Selling an older solid-state mobile amplifier. 4-Watts in produces
100 Watts output. Has switchable receiver preamp built-in. Works
AM/SSB. Used and well-worn but works OK. Used it with my
Uniden 2600 in my mobile and worked the world on 10-Meters.
Reason for selling: Sold the Uniden and bought a new Icom, now
must sell amplifier. PRICE: $75.00 shipped in 48-States.

This 10-Meter amplifier would be illegal to use on 11-Meters Citizens
Band.

3169. TRAM, BROWNING service & owners manuals

Newsgroup: rec.radio.cb
Date: 2000-01-20 00:00:00 UTC
From: tubecntral@aol.com
Message-ID: <20000120142324.02641.00000956@ng-ch1.aol.com>
Source record: 21018

Hello, I have the following laser reproductions of
the OWNERS OPERATING manuals for TRAMS D-201, and D-201A.

Also the SERVICE manuals for the TRAM D-201A,
and BROWNING GOLDEN EAGLE Mk IV.

These are bound just like the originals, and include a full-size (huge),
easy-to-read schematic. All of the lettering and
detail is very crisp and easy to read, unlike regular photocopies.

Whatever color the original manuals had, so do these.
Also included are clear acetate covers over them, to keep them nice.

Pricing INCLUDES delivery in the 48 state USA, others by actual cost
over domestic USA rate.

****

FULL-SIZE Schematic for TRAMS 201, 201A, separate from manual, 10.00

TRAMS 201, 201A Manual without schematic, 15.00

TRAMS 201, 201A Manual with schematic and acetate covers,
(best value) 22.00

These are very in-depth, and include even alignment instructions !

SAM's PHOTOFACT service manual for the TRAM D-201A only,
has the Sam's index included, nice repro, 128 pages... 19.00

BROWNING GOLDEN EAGLE Mk IV service manual, very in-depth, 19.00

Please respond privately if interested.

Regards,
Joe Pratt, Tubecntral@aol.com

Folks,

[Silvereagle <gene4947@worldnet.att.net> wrote
in article <865tuahon1@bgtnsc03.worldnet.att.net>...]

> Like many others using this newsgroup, I enjoy helping
> new comers where and when I can.

Good! Yes, it's always nice to have people share their
knowledge. I've picked up a lot from various NGs, and
try to give back some occasionally.

> Children and young individuals as well as women and peoples
> of all faiths and races use this as a means to send information
> to one another. Slang, bigot remarks, racist innuendoes and
> abusive language do not belong on the group.

Correct; it *is* supposed to be about CB & related matters...
other comments of any nature, polite or otherwise, don't
belong here.

> Not only does it offend others, it causes distrust and loss
> of customers to the web site.

Well, while it may be offensive indeed, there are NO 'customers'
or 'web sites' involved here. This is an unmoderated internet
(Usenet) newsgroup, which essentially no one owns or controls.
Thus no one but the individuals who post items here are responsible
for said items' content.

From your reference to 'customers' and 'web site' I am inferring
you may be viewing this group through a web-enabled service such
as DejaNews, which merely packages internet newsgroups and puts
a search engine along with a fancy graphical wrapper, with their
own advertising, on top of the newsgroups. Most people read
newsgroups through a 'newsreader' program that is often part of
their net browser program; newsgroup content is distributed to all
ISPs (internet service providers) periodically.

This newsgroup, along w/many of the 50000+ other newsgroups, operate
entirely independently of any organization, corporation or gov't.
DejaNews essentially 'steals' public content and rewraps/repackages
it with advertising. Their value-added is their search & archiving
ability - that is, if you need to hunt down something that was posted,
say, 3 years ago.

> Such actions are also a violation of State and Federal statutes.
> The freedom of speech clause does not apply here.

Sorry, that's just plain *PURE UNADULTERATED HOGWASH*. There are NO state/federal statutes being violated or that are even tangentially relevant to the postings here. These are not FCC-ruled airwaves. If there were any such 'statutes, half the people in this and many other newsgroups would be fined or in the cooler (and not for linears). As long as the written speech is not fraudulent or kiddie porn or part of a conspiracy or yelling "Fire!" within a crowded theatre, it's open season, baby.

Unfounded individual statements by one individual regarding another may be covered under civil libel/slander law. I might have some legal problems if I post, "Joe Blow is a damned thief and a liar," or "Joe Blow stole my car" when poor ol' Joe did nothing like that. But that is an individual-vs.-individual situation that is brought by the aggrieved party to a civil court - there are no charges brought by the gov't (at least not yet... Big Brother is getting bigger by the minute, though).

> This type of behavior is not free speech but abuse of free speech.

It *IS* free speech, and with the exception of the above items, it is generally protected by the 1st Amendment - and, yes. it is in bad taste and impolite. It is often even an abuse of the readership here. But we don't throw people in the cooler for bad table manners.

The beauty of America is I can call anyone an a**hole - including the President ;-) - and not be locked up. The moment we lose this freedom, however slightly it is initially reduced - is the moment that we become 'just another country.' For all our warts, we're still the good ol' USA, and people come *here* in droves from other countries, not the other way around, not just for the $$, but for freedom.

No matter how noble anyone's goal of restricting certain types of speech, their practical implementation and interpretation by lawyers, etc. will have an overall chilling effect. Let's not run down the slippery slope of reduced freedoms - we've gone far enough downhill as it is, with our government having trashed big portions of the Bill of Rights already. Any government capable of an effective 50% income tax rate, a retroactive tax increase, or the Ruby Ridge or Waco fiascos does NOT need *ANY* more power, nor should we - in the name of *ANYTHING* - give up any more of our rights.

A year or so ago - somewhere near Oakland, CA - some special housing for troubled (drinking/drug halfway house, I believe) individuals was going to be set up in a nice residential community. When the future neighbors spoke out and wrote letters to various planning commisions, etc. about possible problems, HUD (Housing & Urban Development) officials brought legal action against these people, saying they were using intimidation to stop 'handicapped' people from moving in. It took a long time for this issue to go away, and the aggrieved neighbors finally got

their attorney's fees ($50K) paid. This shows how far Big Gov't has gone - perverting protection of basic civil rights into a whimsical interpretation of any law they want.

Let's keep America free.

go with a big case ford externally rectified. Get a

alt core casing $30.00
200 amp stator and rotor $100.00
6 300amp jumbo diodes $125.00
build a box for rectifier $15.00
adj, voltage regulator $ 60.00

$330.00 bones later & some change and you have a alt that will out perform Leece all day long. Taking the heat from the diodes out of the alt case is the biggest factor.

Break is what I was taught to say years ago, or your call sign , saying contact seems to be more acceptable now days , I think it is more pressure not to sound like 11 meters , like saying 73's , or anything faintly that resembles CB,I would imagine that on 2 meters ,maybe a lot of folks that scold about it have never been on HF, my apologies about the language , but normally I am not to tolerant of verbal abuse and the logger tends to come out !

The radio receives and transmits perfectly, but there is a problem with the display. Display is perfect when radio is first powered up. However, when power is disconnected and then restored, frequency returns to 26.0000. Sometimes it displays 26.0000, sometimes the display is blank, and sometimes all the LCD segments are displayed. This occurs whether the radio is simply turned off or if the power is disconnected entirely. In ALL cases, if the radio is again turned off or the power disconnected upon receipt of the erratic display, kept off for a few seconds, and then restored, the frequency returns to 26.0000 with a full display. The display is full brightness with no missing segments, so it's not an LCD issue. Anyone know whats wrong with it? Thanks.

I can Fart code at 5 WPM. Anyone who can't pass five wpm isn't trying to pass. You losers got your free government handout radio license and now you complain ham radio isn't Dumbed down enough for you. I guess you all want to get licensed as easy as you get your welfare checks. Why don't you whiners get together with your CB buddy's and suck up to the ARRL. Maybe they can fix things for you.

Extra class, killed in action.

Sounds to me like the battery needs to be replaced, if memory serves me, I
believe it to be a 3 volt pill type battery.
Although some of the newer models don't have a memory battery.
Hope this helps...

It needs a new battery. A 3 volt lithium on the processor board died.
Go to RipShack, get a battery holder and the battery that fits it,
use 2 pieces of wire to attach battery holder to circuit board. Tape
up battery and holder, and stuff behind/under something. Radio fixed.

From: http://www.iea.com/~donf/pan/POGqsigs.html

Abbreviations, Prosigns, Prowords
CW--Phone (meaning or purpose)

BK--Break; break me; break-in (interrupt transmission on cw. Quick check
onphone).

I was mistaken to use the term "prosign." The term I should have used
is "proword." Break Break must be a local use term.

There are repeater directories both online and off but the best way is
to get on 146.52 and ask.If you tell me where you are I will e-mail you
a list of "open" repeaters in your area,you could listen with a scanner
for a while and see what you think.

Check the commercial suppliers like Max Rad and motorola for an NMO
mount antenna.They have them but the one I had was 48".

OOPS, my apologies to KF6FOZ. I misread the tag and 'flamed' him for the "Mr. Cold Shower" comment about farting 5 wpm.

For all we know... the anonymous "Cold Shower" might not even hold a license.

Stay away from radio shacks ball mount, They are ok but tend to strip out
if abused. If this is the only choice you have then use it. It should last
you long enough to get your moneys worth. Make sure you use the spring,
this has to do with the overall length of the antenna, it will work
without the spring but will not truly be the length it needs to be @ 11
meters. Mounting it on the top of the bed rail will perform a little
better than mounting it on the bumper, but will also make the antenna
smack more trees. If you decide to mount it on the bed rail keep in mind
that when mounted up against the back window it is possible for the cab to
interfere with the antenna, most of the time it will not. It will work
best on the back of a toolbox across the bed of the truck.
Good Luck,
-=PEAKABOO=-

Are we referring to a RF amplifier? If so the only thing that should draw current would be the LED and fan if applicable. If it only has a LED on it, I would just leave it on. A LED would last for burn forever on a car battery. If this amp is drawing current while not keyed it would not last very long.

I agree to the pulley sizing to some extent, on DC alts I believe that it is possible that there may be a "sweet spot" to run the alts at (Rpm's). When you start talking about Electrodyne and Niehoff, you are getting into a whole new field because of price. The brushless alternators are a hell of a lot more efficient because they turn the stator not the rotor, which weighs a hell of a lot less, plus there is no brushes to wear out or fail under a load. Keep in mind that most of the time its a money thing when it comes to choosing from the brands above.
The majority of the alts I have seen use a claw-pole rotor, These particular alternators I use did not impress me until I tried them and checked them under a load with a DC shunt and a voltmeter.

My large Fords are just the opposite Toll, built these are not rebuilds, every part is handwound and the diodes are all Motorola. My 270's use dual sets of brushes. This is something I did after the fact, I am afraid that big DC while play in DX will fry my brushes......Breaker Breaker...

Not that this is terribly relevant, but when I moved to
Texarkana, in 1980, The first time my wife and I went to the movies
we were stunned to see that Smokey and the Bandit was showing. I
asked the manager of the theatre, and he told me with some pride,
that Smokey and teh Bandit was still in its original run at Joys
Cinema 7 and soon they were going to be adding 6 more rooms so they
can put it on 2 SCREENS!
Longest year and a half of my career.

I would also try to tighten the nut with an impact, this is the only true
way to get an alternator pulley without a keyway tight.

Source record: 21136

Yes...but you would have to be calling a another radio that is within 5 miles or so during the day if you are barefoot, (stock 4 watt output) due to skip interference, and about 10 miles or so at night. Set up a base station with a trusted friend...or a relative, and within the limits of range you will have a monthly fee free (except for house current on the base) emergency communications system.

i have found test after test after test that radioshack
center-load antennsa work the best for me
I am at this time using ther trucker ll it is 58"
you mount it on the bed real using there mirror mount upside down to
pinch the lip of the bed
that will put the center-load above the cab af the truck
I alwase get a good 15 miles +++ with this setup
an the radio sounds good

We could be talking apples and oranges when it comes to 1G large frame Fords, because we are all using different manufactures. There's are to many variables between are applications. Really the only Ideal way to check them are side by side. Set each alt at predetermined RPM and load condition and do some measurements. Take some amp,volts and heat readings. Use a thermocouple or a infrared heat reader and see which alt start overheating, which alt loses more volts. etc.
I have been meaning to set up a test bench for testing alts at different RPM,s vs. amperage output.

what's the cost on the Leece's? I believe for $200.00 one can get a 165a right? As far as being cost sufficient I guess Leece would be the way to go but, in my opinion and observation they cant hold up to a big case Ford if built right.

In a word, no. My guess is that anyone who had the slightest inclination to go over to 2 meters and the repeater system has done so during the past 9 years of codeless technician licenses. The freebanders do it for entirely different reasons--the suspense of illegality being high on the list. Also up there is the strong desire to be anonymous--something which a license would negatively impact, and finally, many people are totally unwilling to invest any time and effort whatsoever into gaining a license, regardless of its benefits. If you are interested in licensing, that's great, but I suspect that CB attracts a very different group of personalities than does amateur, and up until now, there were 2 very distinct types of amateurs--electronics hobbyists, and appliance operators. After April, I guess I will wait and see how many of the applicance operators migrate to HF.

Give Jerry's Electronics a call. He does great work. I don't have his number handy but they are in the book. Take 59N and exit Parker. They are on Haywood.

As you now know, stay FAR, FAR away from 4 G's. A few people will recomend them, but they don't hear what their radio sound like on the air.

3252. BILL CHEEK NEEDS HELP

Newsgroup: rec.radio.cb
Date: 2000-01-21 00:00:00 UTC
From: pllo2a@aol.com
Message-ID: <20000121001912.02613.00001336@ng-cg1.aol.com>
Source record: 21061

I FOUND THIS IN THE MONITORING TIMES. DO WHAT YOU CAN.
THANKS
JEFF

HTTP://WWW.GROVE-ENT.COM/MTAPPEAL.HTML

An appeal to Monitoring Times readers
and friends of Bill Cheek:

For much more on the legal case and an interview with Bill Cheek, link to the article, "Bill Cheek's Last Stand," in the San Diego Reader at http://www.sdreader.com/ed/city/arch/C102199.STM

Bill Cheek, editor of the "Experimenters Workshop" column in Monitoring Times and author of a series of books on scanner modifications was just diagnosed with incurable lung cancer at the end of September. If treatment is not begun aggressively and rapidly, doctors give him about 3-4 months.

Bill says, "research on lung cancers is ever on-going ... My doctor said that even a year ago, my case would not have been treatable at all. Now they can offer me a 4-6 months extension." The problem is, Bill does not have medical insurance. He is self-employed at Comtronics and has two daughters in college. Furthermore, charges brought against him in a New York federal court last spring -- related to his scanner business -- are currently being heard before the Grand Jury.

Bill intends to fight the cancer, but he could use your help. Bill welcomes your prayers on behalf of him and his family. If you have knowledge or feedback on the latest cancer research and developments, Bill would appreciate hearing from you. Expressions of concern are welcome, but he'll have little energy for personal replies.

You can also help with your contributions. A trust fund has been set up by friends and family to which you may contribute toward medical expenses. Here are the details:

Contributions for Bill Cheek can be made through Union Bank of CA. Checks can be made out to either:
> Bill or Cindy Cheek
> Cynthia Cheek trustee for William D. Cheek, Sr.

Funds should be sent to:

Union Bank of California
Acct# 0771354719
8359 Mira Mesa Blvd
San Diego, CA 92126
Attn: Rhonda or Kevin Smith (619) 230-3800

OR

Bill and Cindy Cheek
PO Box 262478
San Diego, CA 92196

Though always a controversial figure, there is no disputing the fact that Bill has devoted his life to the love of radio and technology. We at Monitoring Times ask that you give this appeal the widest circulation among your radio friends. As fellow hobbyists, let's show our appreciation by giving generously.

3253. Schematics Needed for Colt Midnite Special

Newsgroup: rec.radio.cb

Source record: 21062

Hi all. I'm in need of schematics (or better yet, service manual) for my Colt Midnite Special model 800 base station. This is a 40 Channel synthesized AM only vacuum tube unit. Yes, that's right, 40 channel synthesized tube radio. I believe that the radio is very similar to the Robyn T123B, Gemtronics PowerMate & GTX-2300 and the Kris 23+

Any leads appreciated - I'd like to get my baby working properly again.

if it were mine, i would check the pin jumpers and pins that were moved for the mod. a jumper may have come loose or one of the pins that the jumpers are on may have a cold solder joint and is making intermitant contact.
one set of the pins used in the mod controls what the display reads. if it is intermitant, it may confuse the processor.

if your radio is a newer model and doesn't have a battery, it probably has a .5 or 1 farad @ 5V memory cap that are growing more and more popular with microprocessor makers.
if this is the case, rad shack sells these too. they don't cost much and take up less horizontal board space than a quarter sized 3 V button battery.
depending on the age of the radio, if it has one, it is either defective, loose or worn out. check for a cold solder joint first. if this is the case, resolder it and power up the radio, put it through some of it's display paces and leave it on for a few minutes to let it charge. a cap that size will take a short time to charge.
good luck.

>
>thanks.

You blow alternators with a 400W Amp? I run a 450W amp with a 60 Amp alternator and a single
battery. I also have a 1000W Car stereo system that this set up. Now I never run the car amp,
and CB amp at the same time, And I've only gone through one alternator. Second from my car audio
background, the only thing dual batteries are good for is when the car is off. The reason you
may be eating alternators is this. If you do alot of talking with the vehicle and drain down the
battery. Now lets say you now have a 20 amp. draw on the alternator for each battery (40 Amps)
cause they are now low. You flick on the amp. (worst case scinario) you now draw 30 amps now
your drawing 70 amps. If you start running your heater, or AC, lights that jut compounds the
problem.

I would suggest doing a full load On test. Turn evey thing on Including your amp and radio Key
it up. And find out how much amperage you are actually using. The cheap way to do this is go to
your local auto parts store and do an alternator load test.

When is this CRAP going to stop??? The new test requirements are
not welfare, you still have to study to pass the tests. Remember
welfare is a hand out. For Amateur Radio license to be a hand out it
would mean no testing at all and no charge for the license.

The Code War is over so stop fighting it! If you think the FCC is
going to rase the code speeds up again forget it, it's not going to
happen. The return of the 13 and 20wpm requirement has a snowball's
chance in Hell of coming back.

You better re-read the message! Extra Class was said by Mr Cold Shower!! Anything else Mr. Im better because I am Dennis B. Walton-Tech+? You are supporting the Arguement that other coded hams are denying.

I am a no-code technician not by choice. It may have taken me a while to go for my code due to owning my own business, but at least I am still going to do my upgrade. So keep your browser open and check QRZ from time to time. Until then I work my ass off trying to improve my life instead of furthering my hobby and when I got the time from work, I'll do my code.

>current on the base) emergency communications system.
>
>

With all due respect, this probably is not practical. The person at the base station cannot stay "glued" to the radio all day. They work around the house, run errands, and even go to the bathroom. (Remote speaker mike at the throne?)

Moreover, the constant chatter on the channel--even if it is just squelch breaks from distant stations, will annoy anyone after a short time. (Ask those who monitor Channel 9. Even though the traffic on 9 is light, there is constant noise from other channels. The bleed over from the power mikes--especially the roger beeps--will discourage anyone).

Much as we like to use our radio equipment ("See, Honey. All this money I spend on equipment helps the family...."), a cell phone makes the most sense for allowing a family member to make an emergency call. Remember that your wife or daughter may not be too excited about talking into a microphone. Most folks are shy about this. It's very likely that they will sit on the road for several hours, or attempt walking, rather than use the CB to call for help. (see below)**

QRM

**This may come as a shock, but some of you have wives and children who HATE your radio. The first thing you do when you get in the car is turn on the CB. They want to talk with you, but they won't do it over the noise. Besides, they cannot tell when it would be interrupting something you wanted to hear. I know.....you just leave it on in the background and you can listen to the radio and to them at the same time. But I promise you, your family does not see it that way. Without intending to, you give the impression that the radio is more important than they are.

The same thing goes for leaving the CB running all the time at the house. (And ham ops, all this applies equally to you!)

I once wrote a book called "How Radio Operators Can Improve The Sex Lives." It was one sentence long:

TURN OFF THE RADIO AND LISTEN TO YOUR WIFE.

Ever been curious why some guys come to work several mornings a week with a grin on their face? Read the book. It works! Give it a try!

It is illegal for you to possess if you do not hold a valid amateur radio
license of the proper class.

If the theory test wasn't such a handout we might be able to take pride in holding a ham radio license.

I agree that 5wpm isn't much of a requirement, but just the same, I would
love to hear you fart at 5wpm!

Well, I agree, 5WPM isn't a real test. You can basically just memorize
the characters and do a 'mental lookup' and pass the 5WPM.

But that's not the point. The point is CW should go, period. It's
outlived
it's prime. If you like it, use it, but don't force it on everybody.
ESPECIALLY
not as a fake qualifier of technical superiority for the 'so called
Extra' class.

With a linear or with out you take chance of damaging your "killer 148"
unless you invest in a SWR meter. This will assure you have a good match
between antenna and radio. After you do that then you can throw the linear
in line with out worry.

KRS

What's the difference between women at ages of 8, 18 , 28, 38 and 48???
The answer is :
08 - You take her to bed and tell her a story
18 - You tell her a story and take her to bed
28 - You don't need to tell her any story and take her to bed
38 - She tells you a story and takes you to bed
48 - You tell her a story to avoid going to bed

I have not used CS-130 but I know there are 105 amp stator and rotors commercially for them. What I need to find out is, where are the amps being produced. Sole from the stator? from the rotor? or both? if that the case a 105 amp stator+105 amp rotor would yield 210 amps. But I think it primarily the stator.

I don't remember pride being a Part 97 requirement. Anyone whose
self-esteem depends on an arbitrary governmental license should
see a psychologist. The value of a ham license is simply the
privileges granted.

If space is a problem, then install a two meter radio, or multiband
vhf/uhf. In most cities, one can have a pleasant drive time experience
with such a mobile. Besides it is hard to fill a log with a new hf
contact while driving. Better to work the locals and get road
conditions and such.

3315. Re: will a liner hurt my radio

Newsgroup: rec.radio.cb
Date: 2000-01-21 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <86a50gjhj1@mark.ucdavis.edu>
Source record: 21164

There is a slight possibility that most amplifiers can damage a
transmitter output section (final) when they switch from the rx to
tx mode. For a very brief period of time, there is an improper load
provided to the transmitter while the relay changes over. This is known as
"hot-switching".

Even though it's bad, most transmitters dont fail because of it,
though it often places a nice little glitch on the air.

The fix can be a few things:

Hard key the amplifier with an interface from the radio direct and make
sure the amplifier is t/r'd in circuit before the transmitter section keys
up. Often requires high speed relays (switching) in the amplifier.

Even though hams have been using this method for years, there's still a
possibility a slow switch relay will hotswitch.

Use pin diode switching... (relay-less)

Delay the transmit power a short time while a slow transmit/receive "t/r"
sequence does it's thing.
A company in Southern, CA. makes a neat box for SSB use that delays the
voice for a very short time while it keys the amplifier into operation.

cheers
skipp

I don't know, Cecil, I am proud of some of my accomplishments in ham radio, and the value to me is in what those priveleges have allowed me to do. I am even proud of passing the tests, but that is not at the top of my list of lifetime accomplishements. :-)

Getting back to what Mr Fiebig wrote, I think that today's testing is less of a handout for full amateur priveleges than was the test I took to get same back in '63. I bet lots of people today would love to take a test they could pass after studying 16 pages of study-guide material. That is what it took to pass the General in 63, and for that I got all amateur priveleges at the legal power limit.

Gee little Porta Johnny waa waa Thought I was kill filed dickweed.
Maybe you should name yourself. Any person who slanders fellow club
members ina public forum needs to be on a list like this. This is a
truth that I read from your posting, I wrote to several of your club
members that I personally know to advise them that you basically are a
lower form of plant life. I provided copies of your post to them as
proof

Therefore, I did read the truth (as you wrote it) I did write the
truth (unless you lied about the whole thing) I did think that the
truth should be spread amoungst that you insulted and I am telling the
truth now. I did all those truths and would do it again, because I
know it pisses you off.

Maybe you wanna send popgun shooter 1 at me again. Yes Johnny rides
the cotton pony, we all know you have a dejanews address and post
messages back and forth to yourself. Best you stay near that big bad
radio station you set up. Never will know when Ares will need you to
rescue someone caught in the ice flows of the Niagara.

Tata prattle brained fool. Go back to teaching your pet poodle morse
code. I'm sure it would be a better operator than the likes of you

Don't forget to killfile me again

It was only 10 pages in the 1957 ARRL License Manual and probably less
than that in 1952 when I passed Conditional and acquired *all* amateur
operating privileges. There were no solid-state device questions at all
on my 1952 exam. :-)

I have a uniden washington model 1002 and the final went out so i replaced the final and driver. And still nothing. At first the unit werked well then the thing just died. The audio recieve and transmit went out meter still responding but the transmit with mic keyed will not work. It looks like the unit is recieving but i get no audio. I noticed that when i try to key down the needle seems to go backwards a little, But it does not Key Forward in either band, the PA still accepts audio when mic is keyed. this is something i never encountered before. Any insight would be greatly helpful. Could this be an audio chip problem or a swithing transistor?? If so which one.

And the answer is still the same. Their is a lot of ammeter's on this group as well as cber's. But you know the real reason, and responding to the guy trying to sale it did nothing but make the person interested in purchasing the amp more secretive, which in turn makes it harder for you to be the "RFEnforcer". See sometimes it is best to keep your flap shut and wait to ambush someone as opposed to jumping right in the middle of someone's business and whining to them..... Silence is golden!!!!

Bull Crap. So I guess it is illegal for me to buy a ten meter amp for my brother (as a gift) who just passed his general class exam. Also what a bout the Kenwood 440 I bought at a garage sale for $25? is it illegal for me to possess this as well? If so I guess I better get rid of the 2K ARRL radio handbook and all of the other literature that has to do with the amateur radio hobby. it must be illegal to possess the study books that teach me how to operate this type of equipment in the proper manner.

Well, I was talking about accomplishments within Amateur Radio, and it kind of hard to disassociate those from my license. I didn't think anyone wanted to hear the horror stories of how I keep my old beaters on the road well past their expected dates of demise. (No one except Carl; the lobster bet does require that the loser drives, so I am going to pick him up in my Jeep. Seeing his fearful expression and white knuckles will be worth the whole trip!)

In my case, it is not possible to disassociate my professional accomplishements from my license, either. :-)

Are you telling me that ham radio has been dumbed down since 1957? And to think, the newcomer today gets to look at the few hundred pages in Now You're Talking study guide and be thankful he didn't have to study those 10 pages to pass today's dumbed down exam.

It is really amazing how fast a 200 amp load will heat up an alternator
rated at 200 amps, 90% of them out there will lose voltage when you apply
this amount of current.

This is fairly simply to do. I have heard people make claims of needing a HUGE electric motor to do this, true you need a big motor, but not something that would require more than a 20 amp circuit in your garage. A DC shunt (or fluke DC clamp). You could use the same meter to read voltage drop and current draw, but probably better if you can watch them both simultaneously, Now the thermometer is where it would get tricky, it would have to give instant readings, so infrared would be just about the only choice, I personally think using you hand would do fine as voltage drop as per load would be a critical test to me than heat, not that heat is bad for these but I mean that being able to tell if it is hot or warm would suffice. For current measurements you would need an active load that was variable, I have done this and have the schematics I made for it around here somewhere, I did mine with 50 amp transistors like you see in the motor mauls. I will dig up that schematic for you KRS and try to get it to you, the only part you really need a schematic for is the variable current adjust, it is real easy to do, I even have a milliamp meter attached to one of the transistors to read current, I just used a resistor to calibrate the current meter and it is real accurate.

>brother (as a gift) who just passed his general class exam.

Possession of a linear amplifier which is capable of use on the 11-meter
citizens band is considered "de-facto evidence" of it's use by non-licensed
individuals. In other words, if the FCC has reason to suspect you of running
illegal power on 27Mhz AND finds an amplifier on your property, you are assumed
to have used the amplifier and will be charged accordingly. Whether or not it
is hooked up at the time makes no difference.

> Also what a
>bout the Kenwood 440 I bought at a garage sale for $25? is it illegal for
>me to possess this as well?

No. Possession of amateur radio transceivers by unlicensed individuals IS
legal. This is an apples and oranges comparison. FCC rules are different for
amateur transceivers vs external power amplifiers.

>If so I guess I better get rid of the 2K ARRL
>radio handbook and all of the other literature that has to do with the
>amateur radio hobby. it must be illegal to possess the study books that
>teach me how to operate this type of equipment in the proper manner.

Now you're just being ridiculous. I'm merely explaining the law to you. Don't
like it? Take it up with the FCC. I'm just the messenger.

Hey Toll I agree on the most part, but most of your motor mauls out there are way underbuilt and way under heatsinked. properly built the parts alone for a 16 pill motor maul would cost around $150 surplus, this would include 24 transistors rated @ 50 amps each, which the more load you put across them the more sag on volts you would see, If you overbuild these things you will never have a bad one come back, also it is critical to have some sort of crowbar circuit in the thing, it would be very hard to build a standard crow bar capable of blowing a line fuse in the case of extra high voltage. So you use a overvoltage sensing circuit that detects high voltage and kills the control circuit feeding the base of the pass transistors.
And the heatsink needs to be about 12x20 with a set of REAL fans keeping it cool. The one I did for my wives bronco has the whole control panel that mounts up front, voltage set switch, volt meter, keyed, unkeyed LED's, variable voltage adjust knob and a LED to tell you if the voltage exceeds 21 volts, it will shut down if this happens. It also has a REAL relay to " series-parallel" switch the batteries, this particular motor maul runs off of an factory alternator with a large relay to bypass the charging system when keyed up. The mil spec plug has 14 pins in it and is bullet proof.
I am not arguing with you by any means. But most of the motor mauls I have seen would not last me a day the way I run my stuff.

That would ensure the lowest SWR which is typically, but not necessarily,
"best."

> Sometimes this can only be observed when the feedline is at

Nonsense. The length of the feedline changes neither its characteristic
impedance nor the antenna feedpoint impedance.

Well here's a new post for all the experts to ponder over, in my 1978 Kenworth I installed new coax [think it might be the problem ,its the Grey foam lined stuff from the local truckstop], new heavy duty mounting studs [mirror mounted ,] external ground wires , the radio is wired direct with no. 10 hypolon wire, have coa phased 4' Francis whips with a swr reading of 1.2, now when I run my 148, an older good one it works fine , but when I choose to install my president Jackson , it squeals all of the time if I put my road devil mic on it it partially goes away , if I use the rk56 or the Asiatic non amplified noise canceller it cannot be gotten rid of ,kind of backwards from what I'd expect, if I install my 2950, no matter where its set at gain wise just reach up and key and unkey the mic and it lets out a squeal , one suggestion was to go back to one antenna with very good quality coax and see if it still persists, the other is that its bouncing off my very tall stacks,other guys I know are running Galaxies coa phased without such problems ,any input would be appreciated

If you did, the problem wasn't the wound up coax; the problem
was common mode currents flowing on the outside of the coax.
You have a different problem which should be addressed accordingly --
not by diddling with the coax.

Coiling a coax will not affect the normal, desirable signals flowing
inside of it.

Have you heard of Prime Panel Meters? (216) 651 0400

They of course will not offer a variable load but make a real
inexpensive way of measuring current. They have some inexpensive
'inductive' ammeters scaled 0-200A with 5% accuracy.

Check the mic cord. Sounds to me like ya have a couple of broken wires. The radio will not hear if the RX wire is broken. I would check that out first then go from there. Change out the mics and see. It could be that the wire on pin 3 is broken.
Good Luck

Greetings!

It's a 12 volt grain of wheat bulb.

You can find polarity and then change this to an LED.

But, you'll need a dropping resistor...

AND a word of warning, you need to get an LED with a high diffusion
lens, otherwise it'll "Spotlight" the center of the display.

500mcd brightness is about the minimum I'd go for brightness.

While Dancing with the Mouse on Fri, 21 Jan 2000 03:32:19 GMT, the

Do not run more then 4 watts into the 667. The 667 has a driver section in it.
You will also burn out the variable faster with a higher drive. I never fed
mine more then 2 watts. I get full front end power and better modulation with
that set up rather then with a higher key wattage.

I do not think that all of those who will pass a 5 wpm test and get on HF are necessarily "code haters," Dick. And I am certain that not all of them have been following the thousands of threads and tens of thousands of posts on RRAP. For some, the ONLY practical exposure they will get to the potential worth and fun of manual OOK CW is going to be from old time CW ops like you and me. For you to have determined, without even having met these people, that you would be overfilled with rancor to even try indicates to me that your goal is not to promote Morse code use at all.

I hope that some of these newcomers come to understand that there are people willing to offer encouragement in whatever they decide they want to do with ham radio if they come on board. If that includes Morse code, I will certainly do my best to help; if that includes some other mode, I will do my best to help with that, too, maybe at the price of a few minutes of explaining why I like OOK CW, but without any prejudgement about them if all they do with that explanation is nod their heads politely and thank me for helping them decide what antenna is best.

Greetings!

Is the bracket of the radio mounted to the frame of the cab?

There's a couple of problems with this setup.

You say you use external grounds - what kind of wire are you using?

For good grounds, try an automotive braided ground strap. Can be found
in almost any Auto Parts dealer, like NAPA.

Use the Braid to connect the metal of the door frame to the
cab frame - regular wire just don't cut it. But a quick fix
is to use old coax - strip off cover jacket and inner
insulation to expose the center and the outer braid
- twist the two wires together - on each end -
and solder a ring lug to fit the bolt of the door frame.
Do the same on the other end and use it to ensure that the
mirror brackets are also grounded.

It sounds like the coax itself is acting like the ground counterpoise
for the set up, leaving you with a lot of RF right at the radios own
antenna terminal - and if it's not grounded, well - you can have the
kind of fun you're having now...

Greetings!

If it doesn't the those 80M antennas would be a lot more problems than
they are now...

IF you encounter problems with coiled coax, and then uncoiling it
makes it go away, there are a few factors to look at...

Antenna mount - making contact with the frame or counterpoise, and the
coax is making good connections to the mount at this point?

Using a Mag-mount antenna? Relocating the antenna to a better spot
closer to the top of the vehicle make more sense. Also verifying that
both the shield and center leads are making contact on both ends of
the coax - at the mount and the radio.

Mag mount antennas, are like any other antenna - but are
fussy with the amount of metal they want. Large flat
surfaces are far better than close confines and trunk lids.

If the above can't quite fit the criteria, then look at the coax
itself and the possibility that the coax has a kink or short in it, or
broken center lead - causing intermittent problems. These
"intermittent" problems can be frustrating. If not sure, replace the
coax.

If you have the MB8719 PLL chip, Replace the Voltage divider "MB3756"
which is usually located along the side of the chassis looks like an
audio chip. If your audio chip went out then you wouldn't have a PA.

If Im not mistaken, The 99v is a PLL controlled radio and if it is changing frequencies on its own, Sounds like the PLL came Unlocked. I cant really say anything about price, but if the PLL was the problem, I would give $150 or so depending on the rest of its condition.

I wish they had to. For sure they'd have to learn
SOMETHING, unlike todays question pools.

> That is what it took to pass the General in 63, and for that I got all
> amateur priveleges at the legal power limit.

And as you tested, FCC was preparing to recant on those
"full priveleges", obviously realizing what a mistake that
ruling had been.
Now today's new and improved FCC just trash-canned all the
progress that has been gained over the past 32 years, all
the bitching aside. We advance even further to the rear, to
where any CB/FBer who wants to memorize enough code to copy
dots and dashes, and do the necessary study of
question/answer pairing can quickly and easily, without
learning, grab everything ham radio has to offer. It has all
been made essentially worthless. Next stop, useless.

And then? Some slow, inexorable and continuous, but
definite conversion of amateur spectrum to commercial use.
Just as the frog in warm water sits placidly, fat dumb and
comfortable, while the temperature is slowly turned up.

Just wait-- the justification WILL be there, and it will be
valid.
There's already plenty on the books, and you ain't seen
nothin' yet.

And I'd LOVE to be wrong. But history DOES repeat itself
and the past 35 years history will be repeated in spades,
this time. We're talking the full HF ham radio spectrum now,
not just one sliver high therein. And, there won't be a damn
thing anyone can do about it. In 5 to 10 years, maybe much
less, the HF bands will sound every bit as bad as 27 MC does
now, and the FCC will just as studiously ignore it all,
whatever is left, - If there IS an FCC left. Riley is ONE.
Even with his hi-tech junk he won't make a dent in it.

It is clear that NO ONE at FCC has been paying attention,
at all. So now ham radio will pay the price.

You're not quoting me correctly.

Yes, I said it, but WITH it I ALSO said:

If you like it, use it, but don't force it on everybody.
ESPECIALLY not as a fake qualifier of technical
superiority for the 'so called Extra' class.

No one said you couldn't use it. Just don't make a PHYSICAL skill
a measure of technical competance. It's not, and never will be.
If you think it is, well, I have some cheap land in Florida to sell...

Thanks Andy,yes the radio is mounted overhead to the cab frame, power to the radio is provided directly from the battery , pos. and neg. sides, with no 10 hypolon wire from Napa, mirrors mount to the cowl part of body ,I cleaned the brackets where these bolt up with sandpaper and installed the grounds from the antenna at this point , I am running a Napa ground strap from the neg. side of battery directly to the cab frame, I think when I get over this darned flu, I will get a good piece of coax and try just one antenna and see if this cures anything, I was running a wire ground from the cab frame to the case of the Jackson , what drives me nuts is that the 148 works and performs excellent, but if I want a bit fancier radio all of these problems , the 148 throws a 51/2 watt dead key ,the Jackson about 6 someone changed the big final in it , the ranger about 10 , this is on my old palimar meter, take the radio's out install in another mobile or on the bench they work great ,have also tried the external speaker mounted away from the radio,aimed away ,no difference, I swear that I've heard noise from the ranger when I've gotten in or out of truck ????, not quite the same as a key up , but its a bit hard to tell,big Cummins motor running , I'll just keep plugging away at it , thanks

Possession of a linear amplifier which is capable of use on the 11-meter
citizens band is considered "de-facto evidence" of it's use by non-licensed
individuals.

>>>Wrong. Their has to be other evidence that you used it. If the FCC is
called and wants to inspect your station because of interference complaints,
and they find a linear, it is de facto evidence.

>>>However, since you WON'T be inspected unless thought of being illegal,
and they find a linear, it is considered to be used.

>>>Having one in your posession is NOT illegal in and of itself. Their has
to me other mitigating evidence of it's use.

In other words, if the FCC has reason to suspect you of running
illegal power on 27Mhz AND finds an amplifier on your property, you are
assumed
to have used the amplifier and will be charged accordingly.

>>>So, now your changing your story. I get it.

Whether or not it
is hooked up at the time makes no difference.

>>>Right.

> Also what a
>bout the Kenwood 440 I bought at a garage sale for $25? is it illegal for
>me to possess this as well?

No. Possession of amateur radio transceivers by unlicensed individuals IS
legal.

>>>Not if your suspected of running illegal power on the 11 meter band, and
that is exactly what the point is here.

This is an apples and oranges comparison. FCC rules are different for
amateur transceivers vs external power amplifiers.

>>>No, no and no. If your suspected of running illegally (like you would
have to be for a linear to be illegal), then ANY equipment that is capable

of being illegally used can be ordered removed from your posession.

>>>It is Fing ludicrous to think that the FCC would take my SB-220, but leave my TS440 if they thought I was running illegal power.....

>If so I guess I better get rid of the 2K ARRL
>radio handbook and all of the other literature that has to do with the
>amateur radio hobby. it must be illegal to possess the study books that
>teach me how to operate this type of equipment in the proper manner.

Now you're just being ridiculous.

>>>No, he is making a joke, at you. Your arguing a case that has no merit, judging by the quoted rules that have been published by the books he is talking about.

I'm merely explaining the law to you.

>>>Whose law? Certainly not the FCCs... Your own, yes.. Not Uncle Charlie's!

Don't like it? Take it up with the FCC. I'm just the messenger.

>>>No, your a misinformation spreader with this post.

Sorry, gotta call a spade a spade.

I'm going to buy a new radio (SSB) and was wondering if anyone had any
experiences with the Galaxy 949? It has all the options, but is it a
good performer and will it hold up.
Thanks for the help

Look at the Toshiba spec sheet. They are rated at 100 watts PEP.

www.bigradios.com/tollfree has the spec sheets from Toshiba.

Interestingly enough, the 2879 and 2290 are 12 volt rated devices. The RF Parts ratings come from running them at 14 volts....

Since increasing your collector voltage by 50 percent doubles your power, increasing by 2 volts on a 12 volt device will net you <<about>> 20 watts!

3380. Cold Blooded President Lincoln

Newsgroup: rec.radio.cb
Date: 2000-01-21 00:00:00 UTC
From: Duane Deen <ddeen@lcc.net>
Message-ID: <3+uIODilNlYN39XG5Ta89y7W19oZ@4ax.com>
Source record: 21229

Does anyone have any idea why my President Lincoln won't power up when cold?

I have only been using it for a week, and this morning and yesterday morning only the display light would come on until I was 3 or 4 miles down the road. Then the frequency display came on and I could receive and transmit but the RF meter would not display anything. That finally started working about 15 miles down the road. I was not even that cold, 40 degrees or so.

Thanks,

Duane

You *have* heard from me, Dick, over and over, and from Bill
and Ed, too. The ham exams in 50s and 60s were no more difficult
than they are today. In a lot of ways, they were less difficult
than the exams are today. The ARS had already been dumbed down
when you took your first ham exam.

> SOMETHING, unlike todays question pools.

There are more sentences in the correct answers to today's questions in the pools than there were in the 16 pages I studied in 1963. Why would you think that you and I learned by reading those pages in 1963, but that most newcomers today won't learn by reading the pools?

I have taught at local classes and although I saw a few students who just wanted to memorize the answers, most of the students appeared to me to want to learn about the subject I was teaching. I presume that the same passion for knowledge that drives you and me will exist in the same percentage of them as it did in my generation. In 1963, some hams learned and some memorized, just as today.

Dick, if you have an ARRL FCC Rule Book, find the sidebar that explains the major changes that have taken place in Amateur Radio over the years. This restructuring is but one of many, and in each case, Amateur Radio continued to be pretty much what it always was. From what I am hearing, VE sessions that used to be dead are springing to life; can that really be bad? What was disinterest is now interest. Can that really be bad? IMHO, the restructuring that just happened is a good thing, will breathe new life into ham radio, which will be no better or worse than what we all make it. In my opinion, the time to discuss this in detail was during the rulemaking process; we all did, including ARRL, and out of that, the FCC reached a decision. I, for one, intend to support that decision because that is the one that was reached under our legal process. And that decision does NOT define what Amateur Radio *is*; that is still up to you and me and all those who become licensed under the provisions of Part 97.

Dick, if I thought for a minute that the problems facing Amateur Radio today could be solved by testing, I would support it. If I thought that making people work harder before becoming hams would solve those problems, I would support making them work harder. Heck, Dick, it is harder to become an Extra than it is to become licensed to drive a car,

and 50,000 lives a year hang on the wrong side of the balance on the outcome of the latter. When I teach radio classes, I don't see troublemakers and rabble rousers; I see serious, respectful students eager to enter ham radio. THESE are the people who will be our future. When I see the bad guys in ham radio, I don't see lazy whiners, I see disturbed people who were willing to work hard enough to get a test under today's rules. Most VHF-only hams are not breaking the rules on VHF; they will not break the rules on HF. Most of those who are breaking the rules have passed a code test. There is simply no correlation that I see; how can we decry that the change in code test speed will create one?

I intend to move on, and in spite of the protestations of my friend Len that such is "recanting," I will say clearly that we all had our say, ham radio is what it is, and we should all work to help it grow and be strong. All those who will be issued licenses under Part 97 will be hams, they can take no tests other than the ones that will be made available to them, so after they have done so, I will do what I can to be helpful and encouraging, both personally, and on behalf of ARRL. I sure hope that you can find it in your heart to do the same. IMHO, that is the course that is best for ham radio.

Maybe their trying to "broaden" their sales area.

I had the same exact problem with mine. Costed me 60 bucks to have it fixed.
The problem was in the "channel board". It's the board you perform the mod
to open up all the channels to.

Heres one for ya...

had the final in my cobra 29 upped and the radio tweaked....
first problem it wouldnt work with my wilson 1000 ...whenever i key the mic hte idiot ant light comes on...

swr = 3 anywhere

so i bought a K40 trucker...set it up all seemed fine the i noticed that if i keyed the mic on any chanell under 19 the antenna light would come on only when i talked into the mic...doesnt do this from 20 on up

swr =1.2 on upper channels and 1.5 on lower....talked to a tech about it and he said not to worry....the Idiot Indicator Light Circuit is not as stable as one might think and is no indication that the radio is not working fine and doing no damage...

come to think of it it seems to be working just fine on any channel....sure would like the benifit of you'alls wisdom....being a computer geek-tech...this little stuff annoys the hell out of me....

That's odd. I ran one mobile for a while (and will again soon,
whenver I get around to it) and the worst I ever experience was that
the s-meter wouldn't work at first, and this only happened on some of
the coldest chicago winters. After talking to some friends who had
them, it seemed that this wasn't too unusual (of course, I still
didn't like it).

Sorry, no real help here, just sympathy (and I'm kinda curious myself
about the solution, let us know if you find one).
Good luck

dirk.

1. Galaxy Saturn Turbo, I am the original owner and this radio is in excellent cond. all receive and some transmitter modifications have been done and this radio will not disappoint anyone. covers 26.000 mhz to 32.000mhz. I have had nothing but excellent reports of a good clean signal. I have mainly used this rig on SSB but have also had excellent reports on AM. Radio puts out 175 watts pep ssb and will dead key 4-50 watts and swing 150 watts on AM. Radio will ship in original box with stock mike. $500.00 + shipping.

2. RCI 2950, I am the original owner and this radio is in excellent cond. All receive and some Transmitter modification have been done along with a LT-2 Echo board with dual controls, and sounds excellent. Will ship in original box with stock mike, dc power cord, and mounting bracket. $175.00 + shipping.

3. Gizmotchy Beam Antenna with two power boosters for a total of Five elements plus a antenna support kit. Boom length is about 17', Horizontal and Vertical Gamma Matches. I have all original paper work. $ 150.00 + shipping.

I have pics of the radios that I can send via E-Mail and a product description of the Beam.

Greetings!

Try this, it's a simple check, since you say the 148 GTL works fine in this setup...

Got an ohmmeter? Set it to read low resistance 1X or 10X scale [lowest setting]...

On the 148 - the power connector is identified with + and - symbols, check the - side, with the other lead to the rear panel metal. It should show almost infinite resistance this way.

Do the same on the Jackson, and the RCI - If I'm not mistaken the RCI and the Jackson are for Negative Ground vehicles only.

These two radios may show ground to the frame of the radio or read a dead short, from the negative side of the power lead.

If this is the case, and you show infinite on the 148 GTL but a Short on the Jackson and RCI, then the answer is due to the type of ground you're running.

RF is flowing back to the radio via the Shield of the coax, and the power lead ground is not at the same true potential.

Why? The Grant XL/Cobra 148 type chassis designs are for Positive or Negative ground ignition systems. They offer RF shielding that helps prevent the problems with squeals and stuff when the RF ground and Battery ground are at two different potentials.

This is as far as I can go to see if this helps your situation.

While Dancing with the Mouse on Fri, 21 Jan 2000 14:56:07 -0800, the Modem interrupted with an MNI from ""Sasquatch" <Sasquatch-Trucking@worldnet.att.net>", and the MotherBoard buffered this to Video RAM:

Greetings!

VCO is out of lock when the temperature is too low for the on-board uP
chip and the external VCO board on the Mezzanine, or 2nd board, aren't
close enough to the same frequency as each other - making the display
blank out because the uP and the rest of the board are too cold to
lock in.

Fix is not easy, but do have a competent tech look into the
re-alignment of the VCO [Mezzanine] board to see if this can help
reduce the amount of time needed to warm up.

Greetings!

I'd question what the Tech did...

Did they put all the parts together properly? I'm concerned that the
Wilson shows an SWR of 1:3 - not good, if you didn't change anything.

But, the AWI, as someone suggested before, is thru VR 6 - if you have
that pot, otherwise I've some across a resistor soldered across where
VR6 would be. It's not labled as VR6 on this particular type, it's
just a resistor going diagonal with one hole open. Increase it's value
to a 1.7K or 2.2K - the ones I've found are originally a 1K resistor,
increasing this value seems to correct the AWI light to the right
level to warn you when there is something wrong.

Source record: 21256

Greetings!

Well, I've messed with this radio and I'll see if my notes are with
yours' ... ;-)

While Dancing with the Mouse on Sat, 22 Jan 2000 05:06:06 GMT, the
Modem interrupted with an MNI from ""rufus279" <c279m@yahoo.com>", and
the MotherBoard buffered this to Video RAM:

:+> I remember seeing some posts about this rig related to its audio. I just
:+> opened mine and I can not find Q202. I searched the board and found
:+> RV202
:+> (AMC mod limiter pot) but I can't find Q202. There is a Q207 next to
:+> RV202.
:+> It's a black and "d" shaped right on top of the pot on the left side if
:+> your
:+> looking at the board with the front facing you. If that's it, do I
:+> cut/de-solder all 3 tabs or just some of them?

Due to Silkscreening - this "7" is a truncated "2" but yes it is the
one.

Removing it, gives me the best results.

:+> Also I remember something about making a solder bridge across a gap on
:+> the board to fix another problem. Can somebody explain that in better
:+> detail.
:+> I think I might know the spot and can send you a pic to verify what I
:+> think it is.

There is a foil land cut between 2 caps, and what it's for is to
reduce the ground loop problem that tends to generate more noise.

If you look on the top of the board by this section, you'll see a wire
jumper there instead. This jumper is for one side of these two caps
and the one I'm referring to is C238 - it's an electrolytic, with a
disc, or mini-axial lead cap next to it, by Q403 [it's hard to read
those d*mn numbers], the lead goes into the ground side of this
transistor, the one right in front of the Audio Amp Chip.

Solder over the cut trace, and I forgot to mention to remove a wire
jumper in between the MOD RV202 pot and the Audio Amp Chip thats on
the top portion of the board after doing this. This should take care
of the squeal and actually lessen the noise to a point that the radio
is a lot better to listen to.

:+> Finally, does anybody know which pot is for the output power? I found a
:+> foreign website that deals with the export version of this radio (an Alan
:+> series) and it says for the 77-115 a "easy to find blue pot". Well there
:+> is
:+> no blue pot in this rig. The only one I can see that I don't have notes
:+> on
:+> is a tall yellow pot in the center of the board. Is that it?

No, at least not in my "version" - the coils are L306 and L307 by the
Final.

An interesting mod, would be to modify the Driver section. There is a
coil by Q303, labeled L303.

Obtain another 2.2uH choke, or cannibalize one from another
radio, and lift one lead of L303, and in the empty hole left
behind, solder one end of the extra coil, to the board, with
soldering the other free end to the lifted end of L303.

This makes the coil appear "larger" in value [in series] and
helps with talk power without overheating Q303.

:+> Thanks to all those that can help.
:+>
:+> Chris

I've got other mods, that are small changes to tailor the RF gain and
ANL response to improve the noise figure, I can go into those on a
later post if you want...

3409. Re: DEAD WASHINGTON Base ?????

Newsgroup: rec.radio.cb
Date: 2000-01-22 00:00:00 UTC
From: CodysPC@Iserve.Net
Message-ID: <3889f1f0.72737244@news.iserv.net>
Source record: 21257

Greetings!

Check the AM MOD amp, a 2SB525, a 2SA1012, and a 2SC945 - located by
back panel, with the 2SA1012 bolted to the chassis for heat sinking.

Since you've got a PA - the Audio Amp section should be ok.

If you haven't, please check Mic Wiring and *DOUBLE CHECK* the work
for replacing the finals.

Have you checked the Bias of the Final and Driver?

If you haven't adjusted them, checking this for proper
voltage would isolate the work done as being the problem.

You shouldn't have to adjust these trimmer pots to obtain
.7 volts if the Final and Driver are replaced with the same
parts.

If you find that the voltage is quite different, then
definitely re-check your work.

Also, if you find little or no voltage at all, then suspect
the MB3756 - as someone has already suggested. Located on the
right side, chassis wall, with the component side of the board

up and front panel facing you.

You also have a few Electrolytics in the Final and Driver, along with
the audio amp sections, check to see if these caps are shorted or
blown open.

The ones to look for have the 10volts rating on the side of
the cap and I'd replace them one at a time to see if they've
failed.

There is one, rated 470uF at 10Volts - at the output of the
audio amp, since you still have PA - I'd look into the PA
and Ext speaker jacks - to see if a solder blob fell on them
and is shorting out the audio.

Did you install any Talkback? Recheck that work too.

While Dancing with the Mouse on 21 Jan 2000 18:49:35 GMT, the Modem
interrupted with an MNI from "psycowolfe@aol.com (Psycowolfe)", and
the MotherBoard buffered this to Video RAM:

:+> I have a uniden washington model 1002 and the final went out so i replaced the
:+> final and driver. And still nothing. At first the unit werked well then the

:+> thing just died. The audio recieve and transmit went out meter still responding
:+> but the transmit with mic keyed will not work. It looks like the unit is
:+> recieving but i get no audio. I noticed that when i try to key down the needle
:+> seems to go backwards a little, But it does not Key Forward in either band, the
:+> PA still accepts audio when mic is keyed. this is something i never encountered
:+> before. Any insight would be greatly helpful. Could this be an audio chip
:+> problem or a swithing transistor?? If so which one.

Nice post Mike! Good Luck!

Being an Amateur for over 10-years, and having attained my license
before the advent of no-code, and still enjoying all aspects of
CB radio, I"M ON YOUR SIDE!

Keep working hard and ask yourself WHY amateurs who HATE CB come
here. They are not superior operators because of the license
they hold. They are inferior humans by trying to talk down to the
next guy based on their inadaquacies.

Dino...K6RIX

I had a Hustler HQ-27 center load, also had the K-40, no difference in performance.

With no previous radio or code experience I went from CBer to extra in 7 months,I didn't learn a damn thing from the question pools.What little I know I learned from hands-on and doing a lot of non-question-pool reading.
Whwn the ARRL looks back in 20 years I hope they're happy with what they did to this once great hobby.

A fair SSB radio and I would prefer it over ANY AM radio.I don't
believe in illegal mods but if you decide to go that route be aware that
the 146 can become "flakey" with an idiot doing the channel mod,the 148
is a better choice here because even an idiot can do the mod on it.

It sounds an awful lot like my dad, with the "I had to walk three miles
to
school everyday, even in bad weather. And if our shoes had holes in
them, our feet got wet!" But I guess my dad was pretty well off. I've
heard from others their dads would claim they were barefoot in the
winter.

I use a small battery bank, and I take all the power wires from all of the alternators to one battery bank. I then use one regulator to control all three alternators. If you look at this pic.
http://www.geocities.com/MotorCity/Highway/5648/peakaboo26.html
you will see a bundle of wires, these wires plus a couple out of view in this pic are going back to a single battery bank. There is a couple of smaller wires in this pic that are for a separate alt setup for drivers.

Difficult to get too close to some. IME at Detroit some of the serious hitters don't like to let anyone see what they're up to!

I have some serious reservations with regards some of the aerial designs I saw but I kept my opinions to myself.

I'm also considering visiting Dayton for the first time this May and then continuing up to Detroit to Sonny's event but trying to find a motel room within 50 miles of the place via he net has proved difficult to say the least.

Thanks for the info Andy!

I still have a few questions thought. I cut the Q207 and believe I found that trace, it should have looked like somebody scored it with a knife, right?

As far as the wire jumper between RV202 and the audio amp chip, I can't find such a wire. What color is it? Any info on that would be great as well.

Finally I did a small search for that L303, but can't find it. Where exactly is it?

And if you can, please post the remaining mods you have for this radio. I have found the 120+ channel mod already and have that done. Works great.

Thanks

well it is nice to see that we are talking about two meter issues on this ng
, and who says cb radio operators are flocking to them ham bands, oh let's
get esoteric shall we,.......dan out.............

Here in the uk it is also illegal to use more than four whiskeys,
however in a famous case about 12 years ago a house was raided by
equivelent of your FCC. The burners were found in a washing basket
still warm!!! So it was assumed that the couple must have been
transmitting with then. They where duly prosecuted and heavily
fined,also the burners were confiscated and detroyed.

3456. Re: FOR SALE: 10-METER MOBILE AMP

Newsgroup: rec.radio.cb
Date: 2000-01-22 00:00:00 UTC
From: cobrano-spam@budweiser.com
Message-ID: <3888fae6.12880223@news.thegrid.net>
Source record: 21305

This is the outcome of a case involving illegal use of a linear on 11 meters as well as equipment on business band:

Case was dismissed since the amplifier was setting on a shelf when premises were searched for equipment involved in illegal use on 11 meters.

The court states that according to the Federal Communications Commission Rules and Regulations, Possession is not concidered evidence of use and it therefore is legal to possess amplifiers as well as business band equipment without a license. However use of these items is Illegal without the proper licensing.

The FCC has the right to confiscate any equipment involved in illegal use including the coax, antenna, radio and etc... There must be hard evidence of use, IE: Amplifier is inline with radio or coax and so forth. Business Band Equipment connected to coax leeding to aentenna.

Amplifier must not state "For use on 11 meters" or "For use with CB Radios" or have a frequency range from or covering 26.965mhz to 27.405 mhz anywhere on the case and must state "Illegal for use on 11 meters" or "For Amateur Use Only" or no statement at all.

In a summary: If you have a linear amplifier in line with a cbradio or modified ham radio on 11 meters, You can say goodbye to all of your equipment that is currently hooked up together when FCC and The local Law Enforcement agency searches your dwelling or mobile unit.

However, If your linear is on the back seat with no connections to it and you are running a cb radio (Stock), Nothing can be filed or you can not be prosecuted for a violation since the amplifier was not connected and there is no hard evidence of use.

A linear shouldn't USUALLY hurt your radio.
But it depends on a few things:
1. Base or mobile?
2. what is it running off of?

No it isnt, however it divides voltages so it can distribute the
correct voltage to the proper points in the radio. I cant remember
exactly, but it should have 8 to 10 legs on it and it is concidered a
SIP (Single Inline Package) typ case.

3462. Midland 77-115 Question

Newsgroup: rec.radio.cb
Date: 2000-01-22 00:00:00 UTC
From: rufus279 <c279m@yahoo.com>
Message-ID: <2Vai4.1158$wF2.89744@server1.news.adelphia.net>
Source record: 21311

I remember seeing some posts about this rig related to its audio. I just opened mine and I can not find Q202. I searched the board and found RV202 (AMC mod limiter pot) but I can't find Q202. There is a Q207 next to RV202. It's a black and "d" shaped right on top of the pot on the left side if your looking at the board with the front facing you. If that's it, do I cut/de-solder all 3 tabs or just some of them?

Also I remember something about making a solder bridge across a gap on the board to fix another problem. Can somebody explain that in better detail. I think I might know the spot and can send you a pic to verify what I think it is.

Finally, does anybody know which pot is for the output power? I found a foreign website that deals with the export version of this radio (an Alan series) and it says for the 77-115 a "easy to find blue pot". Well there is no blue pot in this rig. The only one I can see that I don't have notes on is a tall yellow pot in the center of the board. Is that it?

Thanks to all those that can help.

Chris

Find the channel were the AWI ;ight comes on and has the highest SWR and leave it there. Remove the radio from it's mounting bracket, leaving the coax, mic, and power wires pluged in. Remove the cover that has the speaker on it. Careful, the speaker wire are short, but long enough to allow you to do this. Now, if you look up in the area were the power plug is, you should be able to find a component labeled "VR-6". You'll find the label printed on the board next to the component. Turn this until the AWI goes off. If you want, you can check to see if the AWI lights up on any other channel, but I doubt it will. That should solve your problem.

3476. Quality CB shop

Newsgroup: rec.radio.cb
Date: 2000-01-22 00:00:00 UTC
From: "R.J." <rjmcman@nb.net>
Message-ID: <0yei4.403$K5.3592@newsfeed.slurp.net>
Source record: 21325

I'm looking for a quality CB shop between Pennsylvania and Virginia.
I'm going to Richmond for work and would like to stop and get a few odds and ends. I have no shop locally so it would be nice to actually walk into a store and see stuff for sale. thanks.

146gtl's are good radio's. Only thing I can tell you is that some of them are not modifiable. Check to see what PLL chip you have in it and if it is a D2816 PLL, then you can modify it. If it is not, You can remove the old chip and replace it with the D2816 PLL. After you mod it for extra channels, Your new set of channels will be 5kc off freuency , thats when unlocking the clarifier comes in. I dont have the mods for it in my present location, however if you do get them from someone else that would be great. The radio is worth doing the mods to if you want to spend a little time doing it.

Good Luck..

With all due respect, why do you guys continuously crosspost this diatribe the Satellite newsgroup? Speaking for myself, I cannot see where anybody here cares about the CW/H.F. privileges, it is a non issue.

You guys are so wrapped up in disputing the now commercially worthless H.F. segments that you have lost focus on what the commercial sector really wants and is lobbying for, two meters and UP for satellite work.

I cannot help but wonder if the FCC and the lobbyist have struck a deal and this restructuring is a way to wean us off of the upper bands.

Free your mind.......

As usual, wrong again, Dick. My parents drove me 200 miles
round trip in a '46 Chevvy to the Houston FCC office in
1951. The only alcohol I had was Hadecol (sp?), 30 proof :-)
I often wondered why that stuff made me feel so warm and
fuzzy.

The MB3756 is an active switched voltage regulator. There are
several outputs from this IC.
One output is a steady 8v which runs your PLL and clarifier
circuit. Another provides 8v on RCV only while its compliment
provides 8v on TX from another pin. The input pin that controls all
this usually has about 13v on it until keyed. This is an easy IC to
check operation on and I wouldn't just replace it w/o checking these
inputs and outputs first.

HEY PEAK,
I AM CURIOUS ABOUT SOMETHING ELSE. AND WE HAVE NOT TALKED ABOUT THIS
VIA EMAIL. SINCE YOU KNOW I AM TRYING TO GET A MOBILE STATION TOGETHER
THAT IS GOOD. I JUST HAVE NEVER UNDERSTOOD THE MULTIPLE ALTERNATOR
CONCEPT. HOW IS IT USED ON THE BATTERIES?
DO YOU RUN THE HOT WIRES (IN YOUR CASE 3) DIRECTLY TO THE BATTERIES?
IS IT THE SAME BATTERY OR IS THERE SOME OTHER WAY?
I AM STUMPED ON HOW YOU GUYS DO THIS. SINCE YOU MENTIONED YOU HAD 3 I
JUST WANT TO KNOW HOW THE WIRES ARE HANDLED?
THANKS PEAK

But it does change the voltage / current ratio at the
antenna and that is the basis of a good or poorly loaded
antenna. The best loaded antenna is to have the voltage and
minimum currant at maximum. Depending solely on SWR is
fooling yourself... it is a compromise many a time,
especially on mobile.

Cecil, I have to say that at age 15, I did take pride in obtaining my General. When I get a chance I will ask my parents why they didn't take me to see a psychologist for this abnormal behavior. I also took pride in high school wrestling, good grades, honesty, ect. What a warp individual I must have been. Thanks for bringing this to my attention :)

Ed, I can't comment on how the exams were in 1963, I wasn't born until then. I guess if I did pass prior to age one, I would have to admit that the testing was much easier then. :)
However, I took my General exam in the late 70's it was much harder than what I see as questions today. I did find the code requirment much easier than the theory, probably because I was just getting into Algebra at that age and there seemed to be a lot of formulas that I had to know that were difficult to understand. However it did lay a great foundation for growth.

Oh by the way, when I took my General, the exam was tube theory. After passing it I took the Advanced the same day and it was solid state threory. I was one confused teenager (Maybe thats what triggered the pride thing... Cecil :)) They were in the middle of changing the exams.

Best Wishes,

Timothy Fiebig K2TF

Source record: 21345

QST--

You are invited to join one or all of the following lists on onelist. All these reflectors are e-mail based, and moderated so that no spam, porn, off-topic, or personal-offensive posts are sent out. You will receive no off-list e-mails by subscribing: again; no spam.

These lists (with average recent subscriber sizes) are:

ANTENNAS@ONELIST.COM 120 members
CROSSFIELDANTENNA@ONELIST.COM 60 members
FRACTALANTENNA@ONELIST.COM 210 members

Please review the descriptions at

http://www.onelist.com

Please note the CFA list specifically deals with this antenna in an objectively critical fashion and no posts will be allowed that make grandiose claims without supporting data presented. To date, no data has been presented which requires the extraordinary claims made by some pundits: there is no evidence for better performance than any other small vertical antenna (and that performance is poor).

To subscribe to any list, either go through the process at onelist, or to skip the process just do:

---------- -subscribe@onelist.com

where the ---------- is the name of a given list (such as 'fractalantenna')

Point taken, but, what do you use the freq. counter for? I have it on my Midland 79-290 now and all I can see it does is tell you the freq. number for the channel you are on, and I know that already. Can it help in any other way as giving you the exact freq. if you are tuning in a SSB freq.? My 79-290 will not do this. I could see that this feature would be useful then.
Thanks for the response, and thanks to Debbie also.

Hello everybody. I am in need of a mounting system for the radios in my car. It dosen't matter to me if it is a console or mounting bracket, so long as there is room for my rigs. I need to know where to go to get one, or who makes these. Thanks in advance.

I used to have a VC100 that was put in place between my mic and radio
it had echo, roger beep, and talkback built in as well as something else
I forget who made them

I would really like to have another one of these but I know they are no
longer made

if you have one to sell or know where I can find one please let me know

Now Now John, It's not 250 miles, more around,
110 to 145, depending on local in your neighborhood.
You should know me better by now, driving for me is
a pleasure, not a task for most people.
Porky Huh, sounds like a great reason to go up
there and try my new recipe for pork rinds.

As far as the set up, I said before, more powerful
than when you left town.

Channel 1, I WON, No ifs, ands, or BUTTS about it.
I'm working on 17 now, but the good things about
that channel, there's always some trucker coming
through town to pick on.

Your "tech" did not adjust an or switch out VR6. This gives the AWI (antenna warning indicator) a reference or SWR SET (as seen on most meters [external]). Without this changed, well...

Also, the mods he performed is probably causing spurious transmission (w/ harmonics) and your meter may not be as accurate if it is the el cheapo line (no offense, not everybody has $300~ to shell out). Also, it sounds as if you are using the built in SWR meter. I myself dont care to use them... but... since you are.. it sounds as if (assuming you know what you are doing when calibrating the SWR meter) that you need to lengthen your antenna a little bit. About a 1/8-1/4 inch should do it.

Did he perform the receive boost? (no, not just turning up the VR)

Though, its best to ask him again, and go with this information I provided (I cant speak for the others that may reply to this).

L.A. Computers wrote in message ...
|Heres one for ya...
|
|had the final in my cobra 29 upped and the radio tweaked....
|first problem it wouldnt work with my wilson 1000 ...whenever i key the mic
|hte idiot ant light comes on...
|
|swr = 3 anywhere
|
|so i bought a K40 trucker...set it up all seemed fine the i noticed that if
|i keyed the mic on any chanell under 19 the antenna light would come on
only
|when i talked into the mic...doesnt do this from 20 on up
|
|swr =1.2 on upper channels and 1.5 on lower....talked to a tech about it
and
|he said not to worry....the Idiot Indicator Light Circuit is not as stable
|as one might think and is no indication that the radio is not working fine
|and doing no damage...
|
|come to think of it it seems to be working just fine on any channel....sure
|would like the benifit of you'alls wisdom....being a computer

I highly recommend Road Hogs CB Shop in Jessup,Maryland.
If you are going down 95 he is at exit 41 which is the Jessup exit.Only a 1/2 mile off the highway in the TA Truckstop. Gary is a very honest man and Mr.Bubbles does the work.
My experience with them is this...
1...Bought a radio from Ebay
2...Took it to him and had uppers&lowers put in.The work was done but the radio was stolen from him.
3...He replaced it with the same radio.(It was shipped to me from his shop with all work done to it like I payed for)
4...The channel selector wasn't quite right (If you just touched it lightly it would go to a different channel without moving the knob)
5...I took it today to him and he found the selector was defective from the factory.So what did he do about it?
6...He gave me a brand new Connex 3300 even up.The original radio was a Cobra NH-ST.
How many shops would do that? I live in Pa. and let him do my work.
He cares about his customers.

There are now some 12 volt LED's available, and might be an option. Depending on how steary your hands and how good your eyes are, you might be able to put a dropping resistor in, and use a standard LED.

The reason the average age of an Amateur Radio operator has risen as high as it has is because of the attitude of the Amateur Radio operators. Granted, not all share this attitude, but those that don't are the exception, rather than the rule. I for one have been trying to understand this attitude, but have failed. If there are any hams out there who would like to enlighten me, I will be more than happy to further my education. Thanks in advance, Bill.

Ever see one of them bicycle lights that light up when you petal?? They get brighter as you petal faster.

This ohms law argument as happened already and it think I know where the confusion came in to play. If you raise the voltage you will put out more power. Now that you are cranking more power you will start drawing more current. But if you now turn the power back down to the original setting you should be drawing less amps then when you were pumping less volts.....

Most people use a single alternator to run the car/truck & radio. Then a separate set of any number of alts with a variable voltage regulator charging a second battery or capacitor bank. This makes it safe to volts your 2sc2879's with out burning out your radio, lights, ect, ect..

Hey toll you have any info on that Sept. thing on bigradios dot com? That is about 10 min from my house according to the location that used to be on there. Can you let me know when it is and if it is really going to be anything there.

I wont take off work and leave the state but I think I can manage to drive ten minuets to check it out. Hell I drove an hour and a half to go to Atlantic City for what I believe was peter rabbits function. I met some cool people and saw some funky set ups. Nothing to brag about you can see some pictures from there on no names site. I didn't bring a camera but if I did you would have saw nothing but Dave made any way. Rock N Rolls ranger looks bad with all them antennas.

Most radios with freq counters built in will show the frequency on
SSB. You might even get a freq counter that wires to the inside of the
radio so you can tell the exact frequency of it on SideBand

You can buy a parts radio and replace it with the one from that but
you also risk that that one may be bad as well.
I can replace it for $20.00 with no cost for the part since I have a
whole box of them and you pay shipping. You can e-mail me if you care
to by removing "no-spam" from my e-mail address.

I don't hate CBers. I was a license CBer in the early 70's. I got my
first ham ticket in 1961 and general class in 62. I currently have an
extra clas ham ticket.
What I don't like about CBers is that fact that they think that they
are above the law. Death threats, profanity, and hate talk dominate
the CB channels. A person running legal power is a rare thing on the
CB bands where I live. If my children were little, I would not
hesitate letting them work the ham bands unsupervised.
But,like the Internet, I would not consider letting my children
work the cB channels unsupervised. That is why hams don't want
the CB set comming up to the ham bands.
Just a thought

That was almost 4 yrs ago. But you are welcome to make the 250 mile
trip to drink a few. Just make sure it is on my day off!!!

Is channel 1 still dead as hell down there? Last time I was there
about 6 months ago, There wasnt a soul around except on 17.

Uh oh! Someone up Named Porky says, Tell him to come up here so I can
squish him... Heh! Sound like a threat?
I think you could squish him with the setup you had that I remember.
Dont know about now though.

I am looking for a similar unit, but the "VC-200" by "RF Limited".
I don't know if "RF Limited" made the VC-100, so you can maybe rule
that out, however they got the patent so there could be a few.

Please send a picture or detailed description and your asking price of
it to my e-mail addy. Remove "no-spam" from my address. I will ignore
those that want an outrageous price!

>99 Ford F150 Supercab

Yeah know, I been waiting for a long time for someone to squish this guy. He thinks his Ford Dually and a 4 pill box is the best out here.

He used to live in Palo Alto, but he is a white guy that reminds me of someone that should have a Galaxy Saturn strapped on to his John Deere tractor.

Steve Michaelson was in this area a couple years ago and got a whole shitty thing stirred up up here. But fortunately that loser was only passing through.

Heh. Even your good buddy "Noggie" was up here for a while tripping off of all these shit starters up here.

I have a load of a time laughing at all the crap up here!

Be advised, It is a long trip up here. If you do decide to come up this way, Bring Mikey with ya...

Cya Later!

Hi all !

What's your experience with the Texas, Cobra, Palomar.......

12 volts and about 350 out

Thx for your help as they are not sold in Europe
